Does any one in this group have any idea where I could download rig
controlling software for an Icom 706.  Operating system RH 9.0.
Thanks! ...73

There is a new TNC from http://www.elcom.gr/index.htm
It has a USB interface and will work as a standalone DIGI without the USB.

Wondering if anyone has purchased one and how you like it.
Dave

Could anyone help ?
I have purchased a new SMP4001 programming kit but cannot get the unit
to talk to my PC, it just keep saying that the serial connection is
not there I have even tried an old 486 procceser PC in case the more
modern ones are too fast but to no success.
This is the 2nd unit I have tried thinking the first was faulty

Chris

Mr. Juan Lozano (XE2FLR),
You have committed fraud against Mrs. Thompson. She has tried every avenue possible to resolve the illegal reversal of payment that you initiated against her. This reversal has caused undue finical and emotional hardship on this woman. I feel the need to send this OPEN letter to you letting everyone know just what you did.

Mr. Lozano, we know English is a second language for you so I will break this down to ensure there is no misunderstanding while still being totally fair & honest with you and everyone else who may read this.

1. Mrs. Victoria Thompson who:
a. Is a registered eBay member, in good standings (eBay.com).
b. Is a Verified Paypal Member (Paypal.com).
c. Listed a Motorola Communications Service Monitor.
d. eBay Item number: 3817317151
e. View item at:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3817317151
f. Shipped item via United States Postal Service (USPS.com) with Insurance
g. Delivery confirmation number 0303 2460 0001 6669 1339

2. Mr. Juan Francisco Lozano-Rodriguez
a. Is a registered eBay member (XE2FLR)
b. Is a Verified Paypal Member. (xe2flr_@hotmail.com)
c. Bid and won auction for item number: 3817317151
d. Paid Victoria Thompson via Paypal
c. Paypal transaction ID #   8YY56447B7708882X
e. Upon receipt of the shipment confirmation number you reversed payment

Mrs. Thompson listed the Motorola Communications Service Monitor on eBay.com

You won the auction with a winning bid of $1,029.09USD with an initial shipping price of $30.00USD for a total price you paid of $1,059.09USD.

You made payment using your credit card thru Paypal.com. After a few days you asked Mrs. Thompson when she would ship the item. She responded that it would take a few days for her son to ship it because the unit is very heavy and she could not lift it. Mrs. Thompson's son sent the item using USPS.com and paid $40.00USD for shipping.

NOTE: The Shipping cost an additional $10.00USD, Mrs. Thompson was kind enough not to bill you the additional money for it.

After the item shipped you were emailed the delivery confirmation number.
Mrs. Thompson who is new to eBay and Paypal purchased items on eBay and also paid for services using her paypal money. Upon receipt of the delivery confirmation number you reversed your payment to the unsuspecting Mrs. Thompson. (Your motives are unknown)

Mr. Thompson has notified You, eBay.com, Paypal.com and SquereTrede.com
You have responded telling Mrs. Thompson that the reversal was inadvertent and that you would correct it immediately and she should not worry.
You also contacted SquareTrade.com and told them to close the investigation.
The reason you told them: "I have resolved this with the other party." These are your exact words to them. The only problem with this is, Mrs. Thompson still has not been paid nor did you resolve issues with her Paypal account.

This matter must be resolved immediately!
You must pay her with a cashiers check for the full amount of $1,059.09.00

Complaints have now been filed with the following agencies;

The Internet Fraud Complaint Center and the Federal Bureau of Investigation
http://www1.ifccfbi.gov/cf1.asp

United States Postal Service (Postal Inspector)
https://www.usps.com/postalinspectors/fraud/MailFraudComplaint.htm

The State of California's Attorney General's Office

Hi there I'm looking for a photocopy or scan of Doug DeMaw's QRN
Squasher published in Dec 96 and July 97 CQ magazine.

Unfortuately this mag is not published in the UK.

    Hello fellas,

      I need to find a source for a power switch for a;

GE  Superadio III,   model 7-2887B
```

The part number taken from the repair manual is:

```
Item  S3,     Part number     EA39X1115,     SWITCH
```

appreciate your help ..... email address would be nice!

Thanks   ......   Tony

You could buy a better phone or put ferrite chokes on the line just before the line enters the phone. Radio shack sells a few different types for only a few dollars.

Mumbai Amateur Radio Society

Hi friends

As you are all aware that our Amateur Radio Emergence Service Team
headed by NLF including Sandip Adiwarekar-VU2UGO, Arun Singh-VU3AUA,
Micky Korde-VU2IZO and Anish Korde-VU2OZO were mobilised on a call
from Delhi to Bihar which is ravaged by Floods all over the state.

NLF & team left early morning by air on 15-07-2004 via New Delhi for Patna, Immediately Reaching they met State Secretary R & R and were informed about the situation , a control station was setup in sachivalaya headed by VU2IZO & VU2OZO with whom the QSO was made by us on 40 mtrs yesterday

As per the information received NLF, UGO & AUA will be leaving Patna and helidropped in 2 remote district which are submerged in waters and no communication possible.

16/06/2004

10.45 am : As per last update received from Patna , NLF UGO & AUA left Patna and are on the way to flood ravaged district , ZRS & Ankur who are on Monitoring Mode are waiting for a QSO with the MARS ARES Team from Disaster Area

Further Update will be made as per the information received from the Disaster Site.

VU2LOC
Shailesh Deshmukh.

P.S. Ham Members are requested not make ant QSO ctc with the MARS ARES Team unless they request for , they are in regular touch with Mumbai(ZRS) , Also they are on Batteries so they will be coming Intermittently on the air to pass emergency messages.

I buy most of my gear at HRO, but I'm getting to where I'm not exactly smiling at some of the prices. I know ham radio gear is expensive, but I get almost sick to my stomach the thought of paying $90.00 for a rapid charger for my IC-190A.

Is there a better deal on the web anywhere?

MUMBAI AMATEUR RADIO SOCIETY

Dear Ham Friends

As you are all aware Grave floods situation in Assam & Bihar ,Mumbai Amateur Radio Society received an SOS call on 15/07/04 at 12.30 midnight from Mr Saroj Jha (Deputy Secretary ,National Centre of Disaster Management(NCDM) Ministry of Home Affairs Govt. of India, ex-A R R UNDP INDIA) to provide communications support in the floods affected area , Mumbai Amateur Radio Society (MARS) immediately responded and 5 members of MARS ARES Team were immediately mobilised.

MARS ARES team headed by NILESH RATHOD - VU2NLF, SANDIP ADIWAREKAR - VU2UGO, ARUN SINGH - VU3AUA, MILIND KORDE - VU2IZO and ANISH KORDE - VU2OZO took the first available flight to Patna via New Delhi, from where they were airlifted by helicopter to various far flung submerged district.

MARS ARES team hams communicated vital information to base station set up at Patna Secretariat (Sachivalaya) on both RT/digital mode which were also being monitored at our MARS MUMBAI CONTROL, we request hams who are QRV on HF may please monitor and if any help required ,necessary action might be taken.

MARS ARES team members are Amateur (Ham) Radio Volunteers who have their own job and not working full time as wireless operators in any Ham Radio Institute ,also the team members were aptly trained here locally thru various simulated disaster management exercises which were regularly held in our society.

Further Update will be made as per the information received from the Disaster Site.

VU2LOC
Shailesh Deshmukh.

Been trying to find the cause of excessive rf but lost on a good meter to use. A friend has so much rf on his ht on one freq that he is unable to transmit or rec on that freq..Ht picks it up in all rooms and outside, brought my ht over and the same result.

Would like a good meter anyway and this makes for a great opportunity to do so.. So any ideas on a good meter to find the source of these problems?

Jim

If the "rf" is in the lower part of the two meter repeater frequencies around 145.250 it might be a leaky Cable TV, cable tv is a secondary user on two meters but on a non-interference basis, I believe channel 13 - cable, is around 145.25 and if you can tune above the two meter band 4.5 Mhz above 145.250 listen for audio and see if it "matches" what is on channel 13 on cable tv. If it is leaky TV cable then the cable company is responsible for repairs up to the entry point, if the leak is inside the building, then owner is responsible for repairs.

Good RFI info at www.arrl.org I think they list all the cable interference on the site, just search for cable rfi.

If your a ARRL member and the cable company refuses repair, have the ARRL assist and they will have the FCC get involved if necessary!
Same for power line noise, but not BPL yet!

Or have the neighbor turn off all the electricity in the house and see if the "rf" goes away, then if the interference is still there it maybe the TV cable, if not then turning on and off different appliances to see if one of those generates "RF", you be surprised at some of the things that can generate "RF" even down to heating pad controls, any kind of electrical device, stuff you would not think of generating "RF". Home alarm systems also and they maybe on battery back up power. Call the alarm company before messing around with the home alarm system or the police may show up if you disconnect the alarm system, it sends in an "alarm" if disconnected.

Is it possible to do anything to a FM broadcast receiver that seems to
have no AFC to help it to stay locked on a station? I have a single
purpose FM radio for music-on-hold that will drift off station in the
course of a few hours.

can I:

Choose another station?

Move the dipole antenna? (If so, then in which direction shall I point
it, at the station or perpendicular to the station?)

add a part? (doubt it is worth it)

Pitch it in the recycling bin and get another radio?

Contains a backdoor trojan.  Installs ipconfigS.exe and ZoneLockout.exe
in your windows system folder/system32, and 3 registry entries.

Guess how I know?

Hi All!

Does any here know where a manual for Motorola GP300 5 tone, and RSS
R02.04.00 can be found?
- Prefereable as pdf or similar...

Need to know how alignment and tone setup funktions works...

Vy 73 de oz4acl, Tonni

Hello,
I'm building a SW and MW regenerative receiver from a schematic that I made changes.(I added more 3 antenna coils among other things).
The regenerative "level" consists of one transistor, BF494, but I was thinking about using the 2N2218 for more power (what do you think)(and if I use a Darlington pair of BF494 or 2N2218?).

The original project ranged from 5MHz to 15MHz, the antenna coil was formed by 3 individual coils, all of them were wound over a 10mm dia. ferrite core:
- L1 (The one that links the aerial to earth) -> 4 turns of #20 AWG wire.
- L2 (The one that makes the "feedback" and outputs the audio signal) -> 2 turns of the same wire.
- L3 (The oscilator coil) -> 8 turns of the same wire, with tap at the 3rd turn.

But there is a problem: I don't want to wind them on a ferrite core, I want them on a air core, so, look at the modifications:
I'm using a 21mm dia. PVC tube former, and #24 AWG wire.
I'll use a 40 - 400 Variable cap.
For AM(I'm using a 50mm diameter former):
- L1 -> 39 turns
- L2 -> 19.5 turns
- L3 -> 78 turns (225 uH) (Tap at the 26th turn)

For SW1(21mm dia., 1.67MHz - 5.4MHz)
- L1 -> 20 turns
- L2 -> 10 turns
- L3 -> 40 turns (21.7 uH) (Tap at the 13th turn)

For SW2(21mm dia., 4.67MHz - 14.78MHz)
- L1 -> 5 turns
- L2 -> 2.5 turns
- L3 -> 10 turns (2.9 uH) (Tap at the 3rd turn)

For SW3(21mm dia., 10.27MHz - 32.49MHz)
- L1 -> 2 turns
- L2 -> 1 turn
- L3 -> 4 turns (0.6 uH) (Tap at the 1st turn)

Will those work?
I'm thinking of using a 8mm dia. former (BIC pen) for SW3 and SW2

coil.

Another problem is the rotary switch, It's is needed a 5x24 one, and
it's almost impossible to find one of that...

Can anybody help me, please!!!

Sorry to bother and thanks,
Hayato

I've just set up my new website featuring antique newspapers & other
collectable paper items. Everyone is welcome to take a look. I just
started the site, so check back often. More items will be added. It's
www.antiquenewspapers.net Thanks!!!

Does anybody know anything about this small coaxial relay (max power,
frequency etc.)

CX-1051
Thanks a lot in advance,

Adam, 9A4QV

I have had good experience with Icom over the years owning W2A, 3SAT,
901A, R10, and a 725. All of these radios have been great products. I
wish they still made or would replace the concept of the 901A.

Recently I picked up the Kenwood TH-F6A. It is a great radio that
consolidated three different radio I had previously. It is a 5 watt
triband 144, 220, 440 with wide band receive. I have been impressed with
the receive since I was not expected much but the audio is clear and
loud and sensitive. The transmit is great too. I would recommend getting
an after market antennae. I picked up the Diamond SRH320A improves the
transmit. In my area there are many 220 machines making this a great one
radio solution. It is impressive how well the radio performs given how
small it is. Hopefully Kenwood's success will wake Icom and Yaesu up to
the 220 market place in the USA.

Good luck on your decision. As you noted any of the major player make a
good product and you will mostly be happy with any decision. I feel
currently the Kenwood is offering the most band for the dollar.

Through the magic of my PC soundcard and some downloaded freeware, I set up my very own INTERNET RADIO TALK SHOW, where I discuss the day's top news stories from a completely independent and refreshing viewpoint.

My shows run about 20 minutes each (to conserve bandwidth). Please visit my website. The URL is below. As a pioneer in one of world's last wilderness areas (namely, the Internet)I need all the support and listenership I can get.

The Max Murray Radio Talk Show is produced on a barest of shoestrings. I'm using the free webhosting of geocities, a bunch of freeware, and my PC microphone-soundcard. That's it! Broadcasts originate directly from the familiar comforts of my den studio at home. I hope you find the shows fresh, fun, and entertaining.

You'll need a Windows Media Player to listen. If you have very common Windows Media Player installed on your PC, and chances are that you do if you have ever listened to anything on the Internet, then all you have to do is click on my link "on the air" and you will be listening to the wit and wisdom of The Max Murray Radio Talk Show! Its about news talk.

My show is broadcast at www.geocities.com/maxtalkradio

Please visit the show and shoot off an email telling me what you think. I welcome your feedback.

Thanks, Max Murray
Talk Show Pioneer on the Frontier of Tomorrow.

First, visit http://www.freeiPods.com/default.aspx?referer=8176593
sign up for a FREE account.

Second, complete 1 of 6 easy offers, most of them ARE FREE (if you
choose to cancel before trial period ends).

Third, get FIVE of your friends to do it if you use
this link,
http://www.freeiPods.com/default.aspx?referer=8176593

This has been featured on CNN HEADLINE NEWS and WWW.WIRED.COM.

How does it work?
Advertisers pay them BIG $$ to get you try their product, try it, buy
it if you like it, or quit it if you don't. Advertisers rake in the
cash and then turn around and buy you an IPOD for generating them the
cash.
```

DO IT NOW!
Visit http://www.freeiPods.com/default.aspx?referer=8176593 and just
READ about it if your not completely sure how EASY it is to make a
free ipod.

Hi Steve,

The FT-900/AT is very under-rated.  It's small, rugged, and you can
usually get them for around $500 used.  Probably the best receiver of
any transceiver I've ever owned (non-DSP).  Does everything you will
```

ever want. Antenna tuner matches up to 3:1 or so.

http://www.qsl.net/sm7vhs/radio/yaesu/ft900/specs.htm
http://images.google.com/images?q=ft900%20yaesu&hl=en&lr=&ie=UTF-8&sa=N&tab=wi

If you want to operate CW, you should look for one with the CW filter.

Dave

Hi,

I am designing a tiny Microchip PIC processor driven 2mhz transmitter and I need help designing a 2 layer 3/4" square PCB coil and matching network. I am hoping to redesign the existing antenna design which uses a tiny ferrite coil and matching network. I am looking to build the antenna right onto the PCB to save space. The range of this antenna only needs to be six feet to a special superhetrodyne AM radio receiver. This transmitter is part of a mouth controller for Quadriplegic people to control their wheel chairs, TV's etc. with their tongues. see: www.newabilities.com for more info.

I need an antenna engineer to help define the PCB coil length, wire width, spacing and vias and create the matching network needed to load the coil from a 3.3 volt square wave logic level drive from the PIC. The matching network must filter off spurious harmonics producing a clean 2mhz carrier.

I have a modest budget for this portion of the design. Please contact me if you are interested in designing and verifying this type of antenna.

Thanks,

Shannon Bailey

Why 2Mhz? the antenna won't be efficient at all, and there is a TON of noise
in that band. Why not use some of the prepackaged 433Mhz data TX/RX modules
out there...or 2.4Ghz for remote control?

The short distance (18" from mouth to receiver) of the system masks most powerful in band interference. We do experience interference from security scanners at stores and other sources of 2mhz interference, but the button coding scheme avoids most errors. The guts of the whole transmitter are the size of an electronic watch module and fit inside the persons mouth and use membrane keys for buttons.

Several hundred existing FDA approved systems have been in use for up to ten years using this frequency. It passes through human tissue easily. I am engineering a replacement transmitter design for these existing systems as the current discrete logic transmitter design is outdated and needing replacement. I do not have the freedom to switch frequency at this point. I am looking for an air core (or PCB material core) coil design and matching network so I can eliminate the current ferrite antenna from the new design to make it even smaller.

Our current antenna produces mostly inductive radiation which works well enough in the existing transmitters to reach the receiver. I can use the existing antenna if no PCB alternative proves sufficient. The current antenna is a 1cm by 2x2mm square wire wrapped ferrite inductor with about 18" of 32ga wire, a couple of surface caps and a surface inductor form the matching network.

This is a high duty cycle application transmitter on for a total of 15 minutes or more per day. A dime cell powered design at 433mhz would require much too much power and has poor human body penetration characteristics. Other frequencies (from 7mhz through 150mhz) are now being authorized for use in through body communication to pacemakers and synthetic organs. We may switch to a somewhate higher frequency for a next generation design but for now must make a compatible 2mhz PCM transmitter to provide ongoing support for the existing systems.

Anyway, if you can help provide antenna and matching network design software or antenna consulting for this project please contact me. We probably have thought about most other options and weighed the issues which include new FDA and FCC certification and regulation issues.

Thanks for your consideration,

Shannon Bailey

Perhaps you may want to consider an IR emitter? it can be made small enough, good on power, will have the range you need......just a thought. select a high enough "carrier" freq and it wont be bothered by lighting or other apps nearby.

new 2m repeater on space station
a new 2m repeater is now operating on the
international space station 24 x 7
the uplink is on uhf 437.800 and the downlink is on vhf 145.800
no tone burst or ctcss is required
the radio is a kenwood tmd700 operating in remote crossband mode
it just retransmits on vhf what it hears on uhf
so if you are getting through you can hear yourself
on the downlink

anyone can work it using a co-linear

to see where the space station is 'live' check

http://science.nasa.gov/temp/StationLoc.html

for 3 days in advance predictions download the pcsat decoder program http://www.ui-view.com/uiview32/pcdec242.msi

when the iss repeater is being worked the audio may be streamed in the
amsat
conference server on echolink so anyone anywhere in the world can
listen in

Again,

I am looking for an engineer capable of designing a 2mhz 3/4" square
PCB antenna. It can be very inefficient but still must work as well
as possible within the constraints I've specified. Referals would be
great too.

Knowledgable HAMS who can breadboard the design and have sufficient
test gear to verify it are also welcome to contact me. I will provide
a small signal generator circuit for testing.

Thanks,

Shannon

I'm not sure what you are asking about.  Try

www.echolink.org

and see if that would be a good starting point.  I assume meant VOIP
like your subject said, and not VIOP as you message body said.

There are several programs that will allow you to access your radio
remotely, if that is what you mean.  Some use NetMeeting to do it, and
they seem to work well.

Take care, and if you want to contact me personally, read the stuff at
the end of this message.

73,
Dave

What kind of activity are you planning from your base station? Will it be just working repeaters or do you plan to do some 2m SSB and CW?

Dee D. Flint, N8UZE

I use the VX150 (2m only) and love it. I have not tried the FT60R, but if it
is half as reliable it should be a good unit.

I'm in a similar boat, having passed my BASIC (Canada) exam. I need something very rugged because a) I will take this everywhere, including camping trips and b) I tend to drop things!!!

I've done a lot of reading on the eHAM site (posted elsewhere) and did a lot of listening on my scanner to hams in Toronto. I had the occastion a few days ago to listen in to a conversation between two hams with the VX-7R, the model I'm most interested in. I was worried about the sound quality postings but they sounded great. Then I heard one of them mention he was on an external mic. Just then another ham buddy of mine came into the conversation. I called him on his cell and he relayed my request to have the two vx-7r's switch to their internal mics. They did and they both sounded GREAT!

I've basically decided to go ahead with the vx-7r, now that I've had the chance to hear them in action!

Rob

Hey- I want a free IPOD, Why not you.

Check out this site that is giving away totally FREE iPods!

I've joined and I think you should as well.
I'm not gonna say I'm a skeptic, I'm not, I just thought it would be
fun to try. Besides I was going to
sign up for Blockbuster ONline anyways which is one of the deals you
can sign up for. It cheaper than Netflix
right now and you get the same deal. Who knows maybe I'll change back
later

It's a completely legitimate offer, and this company has already given
away $4 million in FREE stuff!
Below are links with articles from different news sources like Wired
Magazine and the BBC, and Screensavers
off of TechTv/G4tv.

All you have to do is join, complete an online offer, and refer
friends to do the same. That's it! Well and
get 5 referrals. Cant Hurt they dont ask for any Credit card numbers
only a address to send the IPOD to.

Here is my referral link. To help me get my iPod, click this exact
link to join, or copy and paste it into a browser:
http://www.freeiPods.com/?r=13048380

THey also sponsor other free stuff websites.

Sites about the free IPODS:

http://www.wired.com/news/mac/0,2125,64614,00.html

http://news.bbc.co.uk/1/hi/programmes/newsnight/3683524.stm

New XP2500A
The World's #1 Digital Satellite Television
Receiver Descrambler is Now Available to you!!!!!

Order Yours at: http://www.fta9000.3322.org

No Monthly Subscription Charges of ANY Sort!
No Service Contracts of ANY Sort!
No Telephone Connections of ANY Sort!!!!
Does NOT use ANY Sort of Satellite Access Card
The World's Number One "Cardless" Satellite Receiver!!!!

A NEW Product for the NEW Year of 2005
Our New XP2500A Digital Satellite Television Receiver Descrambler allows you to view at your convenience the following with the USA, Canada, Cuba, Bahamas, Jamaica, Virgin Islands and Mexico:

View Over 600+ Digital Television Stations FREE! (Everything!)
View Over 200+ Digital Commercial Free Music Stations FREE !(all categories)
View Over 40 Pay-Per-View Movies Channels FREE!
View 8 HBO's/5 Cinemax's/10 Showtime's/8 Starz, etc. FREE!
View Seven Adult Channels FREE FREE FREE � 24 Hours A Day (Non-Stop Action)!
Boxing/Football/Soccer/Baseball/Basketball � ALL Sports Packages FREE (With No Black Outs)!
Receive Home-Town Local Broadcast Television Stations from 4 Time Zones
Use this New Television Descrambler at Home/Office/Truck/RV etc.
Works In the USA and Canada � plus ALL of North and South America and Territories!
Works on: Nagravision, Seca, Viaccess #1 and #2, Irdeto One and Betacrypt Digital Satellite Signals!!!!

NOTE TO AUSTRAILIANS: We get many request about the Australia�s "Foxtel Channel". Our New XP2500A Receiver works nearly ANY where in the world - but it will NOT receive "Australia�s FOXTEL Broadcast Channel" as of yet.....they use Irdeto #2 a Decoding System.....so wait patiently - our Descrambling Technicians are working HARD on this one, to brake the code.
International Customers.

Not sure if this is the right forum/newsgroup or not, but let me try it...

I am using a Johnson KW Matchbox antenna tuner with a 130 foot long, 30 foot high dipole fed with about 40 feet of ladder (window) line. It works well on all bands including the WARC bands *except* for 30 meters.

The question is, does anyone have any tips/suggestions/modifications to make this operate on 30 meters?

73,
Carter
K8VT

You do not say what positions you use on 30m. I have found that the 20 m position works better on some antennas and the 40 m position works better on others.

It is likely that the impedance is too high to be tuned successfully with your antenna the way that it is now. Try adding to your feedline which will transform the impedance to your antenna to a different value. One ham whose call I cannot remember has developed a switching system enabling one to select a different length of transmission line varying from 1 to quite a few feet. Just a fraction of a wavelength can transform the impedance of your antenna to something that can be matched.

If this does not work, try adding a parallel element to your dipole that is 1/2 or 3/4 wavelength on
30.

You might search Google on the newsgroup rec.radio.amateur.antenna to see if you can find more information
Regards,
Ed, N5EI

Hi.

I'm going to the Hamvention and staying at the Days Inn Hotel on Miller Lane.
Anybody else staying there?

Hello all,

I'm completely new to the world of ham radio. In fact, I'm so new that I barely know anything at all. It's completely overwhelming searching on the web for good stuff to read about how it works, the culture, and all, so I was wondering if I could get any pointers to good websites that offer an introduction? Searching using google for something like this just offers too much information. Thank you.

Jacob

A good start would be Radio Amateurs of Canada.  It's Canada's national ham
radio organization and can be found at http://www.rac.ca/.  The US
counterpart is the American Radio Relay League (ARRL).  It's can be found at
http://www.arrl.org/.  Between the two, you should be able to learn
everything you want to know.  Good luck!
Bryan, WA7PRC
Everett, WA USA

If you have figured a way to modify your FT-727R dual bander I would really like to hear from you. The emergency group I am a member of has a new repeater and I cannot program the radio to the "new" band plan frequencies.

Thanks--
Alan AA6DW

It's a Yazzzu!  your screwed, that radio (like a lot of other Yazzzu's)
won't do the california 20Khz split. I suggest buying a Kenwood TM-G707A
mobile...good radio for $269.....

Can someone describe me the difference between a direct conversion and
heterodyne principle.

Please note, I am asking about heterodyne and not super-heterodyne...

Posting this for a friend.

He has an old AEA PK-232 unit and a new computer with Windows XP. He is wondering what software folks are using to run this unit, if anyone still is. Any info would be greatly appreciated.

Sam - K7SAM

"The unforgiveable sins this earth must confront and overcome are Nationalism, capitalism, and hoarding. The idea of every nation should be forgot, price should be struck from the commons, and princes should be seen for the devils they are. The sins include our church, secret societies, and other religions which make of the spirit of God a divide."

Last rites declaration of Ioannes Paulus PP. II (Karol Wojtyla)
2nd April 2005

--
order.

794. Why did Jesus Christ not come in a visible manner, instead of obtaining testimony of Himself from preceding prophecies? Why did He cause Himself to be foretold in types?

795. If Jesus Christ had only come to sanctify, all Scripture and all things would tend to that end; and it would be quite easy to convince unbelievers. If Jesus Christ had only come to blind, all His conduct would be confused; and we would have no means of convincing unbelievers. But as He came in sanctificationem et in scandalum,177 as Isaiah says, we cannot convince unbelievers, and they cannot convince us. But by this very fact we convince them; since we say that in His whole conduct there is no convincing proof on one side or the other.

796. Jesus Christ does not say that He is not of Nazareth, in order to leave the wicked in their blindness; nor that He is not Joseph's son.

797. Proofs of Jesus Christ.--Jesus Christ said great things so simply that it seems as though He had not thought them great; and yet so clearly that we easily see what He thought of them. This clearness, joined to this simplicity, is wonderful.

798. The style of the gospel is admirable in so many ways, and among the rest in hurling no invectives against the persecutors and enemies of Jesus Christ. For there is no such invective in any of the historians against

My bad, FAs should only be posted to the .swap and .marketplace groups which were created for ads and let discussion groups be for discussion. However it seems that everyone who has something to sell on ebay thinks all groups were created so they would have a place to hawk their junk in hopes of getting an extra dollar. As can be seen, these FA were spammed to multiple groups without regards to the type of group.

You're crying about an auction that ended 2 months ago?
Seems to me that the bay is here to stay.
Learn to use your filters.
Seems to be the only way for you not to see them.
Also, one mans junk in another mans treasure............
It also seems that people who view these newsgroups
might be curious as to what's for sale elsewhere.
Many have gotten stuck buying on these groups with broken items.
If someone has integrity there is usually not a problem, but there is the other side of the coin where broken items were sold. The new owner has no recourse. At least on ebay there is feedback, not a perfect system but one that works.
And with paypal you CAN get a refund a good part of the time if there is

a problem.
Been there and done that.

So why post FAs in groups that are for discussion? That is what the .swap and .marketplace groups are for. Why should I have to filter out FAs in a discussion group where FAs shouldn't be there in the first place? If people in a discussion group are curious about what may be for sale on ebay then they can check the .swap or .marketplace groups or go to ebay and search, it ain't rocket surgery.
Look at the boatanchor group as an example, which was set up to DISCUSS boatanchor type equipment, along comes the ebayers with a few FAs, then someone else sees the FAs, posts their FAs and pretty soon the group is more FA ads than discussion.

That's a good point. It use to piss me off when these FA started to
show up on the groups.
We can still discuss stuff here but it seems it is the way of the world.
It's like the price of gas, nobody likes it, but it keeps going up and
we still have to buy it.

    It is called spam.  Especially, when they cross-post to so many groups.
    I just look at it like this...if they can't seem to follow netiquette,
then I don't want to do business with them.  Unfortunately, there are so
many people online that are ignorant, it will never go away.  So, I just
report them.

I received my Novice license in late 1974, and worked my way up the amateur ranks to Advanced. I then moved over to the commercial exams, and worked up to First Class. I may be wrong, but I don't think you could get any class of amateur license, without a code test, back in those days.

When I took my test in 1957, the FCC guy testing , told me the most difficult test was the amateur advanced.

I took the General Ham and all commercial elements through 1st class and RADAR endorsement. At that time, there was a time requirement between the amateur licenses, ergo I was not eligible to take the advanced or extra.

Back then You both sent and received Morse, and a solid one minute out of three was the passing mark. The test itself consisted of drawing schematics, supplying missing components to a schematic, etc. Unlike today's NO CODE, No ELECTRONICS exams.

The fact that they were tough to pass, marked passage into a select group called HAMS. After waiting about five weeks I finally received that magical piece of paper that allowed me to contact other members of the fraternity.

My first contact was on 3885 Kcs, checking into the Graveyard Net, finally getting to talk to the mystical voices I had listened to on my Hammurland

HQ-129X.

Among the biggest thrills of my life.

And in some European countries a decade or three back (I don't know if it's still the same), the tests for a driver's license had questions about mechanical theory (e.g., what is actually happening under the hood when you put your foot on the clutch?) and practical tests (e.g., changing a wheel).

Perhaps today's US driver's licenses are worthless too, and perhaps the people who get them aren't really DRIVERS. Perhaps the only "real DRIVERS" today are the people who pass the tests for membership of the Institute of Advanced Motorists (which existed in Britain when I was growing up, maybe still does) or its equivalent in other countries.

Alan AB2OS

On 02/02/04 07:17 pm W4JLE put fingers to keyboard and launched the following message into cyberspace:

> When I took my test in 1957, the FCC guy testing , told me the most difficult test was the amateur advanced.
>
> I took the General Ham and all commercial elements through 1st class and RADAR endorsement. At that time, there was a time requirement between the amateur licenses, ergo I was not eligible to take the advanced or extra.
>
> Back then You both sent and received Morse, and a solid one minute out of three was the passing mark. The test itself consisted of drawing schematics, supplying missing components to a schematic, etc. Unlike today's NO CODE, No ELECTRONICS exams.
>

> The fact that they were tough to pass, marked passage into a select group
> called HAMS. After waiting about five weeks I finally received that magical
> piece of paper that allowed me to contact other members of the fraternity.

http://greynet.net/~gbarc/

Owen Sound, Ontario Canada

MEETINGS Monthly GBARC meetings are held on the fourth Tuesday of each month, at 7:00 P.M., except in July and August. We meet Rockford Restaurant located 5km south of Owen Sound on Highway 10 (at Grey County road 18). Breakfast get-togethers take place every Saturday, at 8:30 am, at the Rockford Restaurant. This is an informal social gathering of local amateurs and visitors to the area. Anyone can attend and all are welcome. Talk-in on 146.94- Mhz. Join us for "on the air" nets. Check into the GBARC net at 9:30 am (14:30z) Sunday mornings 3.783 Mhz and again on VE3OSR at 9:30 pm (02:30z) (Thursday evenings 146.94- Mhz.)

Community Services GBARC provides communications for community events, such as the Terry Fox Run, the Boy Scouts' Jamboree-On-The-Air, and the Owen Sound Santa Claus Parade. Write or email for more information. Many GBARC members are volunteers in the CANWARN <http://www.on.ec.gc.ca/severe-weather/canwarn-e.html> severe weather spotting network.

Repeater GBARC operates repeater VE3OSR in Owen Sound, on 146.940 MHz (-600 kHz offset). This is an "open" repeater with phone patch, free for anyone to use. VE3OSR is funded by GBARC membership <http://greynet.net/~gbarc/membersh.htm> dues.

You miss the point completely, there was pride in becoming a ham, simply because it was difficult. Once obtained, one behaved as a person worthy of being called a ham.

The worst behavior I remember back then was W2OY who used to call "CQ No kids, no lids, no drugstore cowboys..." Unlike the profanity of the bands today.

With the new age thinking , that finds achievement unfair to those that have not achieved, we have lowered the bar so those who were incapable of competing can be included as well.

First it was "why should I learn the code it is only an obstacle to my desires", the point is all endevors in life have a price of admission, if your not willing to pay, you don't get in the show. At least thats the way it used to be, today if I whine enough about fairness someone will give it to me.

Where does it end? I want to be a brain surgeon, I just don't want to spend time learning all that medical stuff, it's just not FAIR... Would you want me as your doctor?

That is correct. The first codeless license (Technician) was introduced Feb 1991. But how did the written portions compare between the amateur and commercial licenses?

This is still going this way. You need to have 15 hours theoretical education and 20 hours driving education under supervision of a driving instructor. Costs you about 1000.- Euros, about 1250 US $. You have to do it with a driving school to securely pass the exam. But the DL then is valid livelong.

The only thing they changed is the oral test. They took away most of it and changed it to a standardized computer test.

> and practical tests (e.g. changing a wheel).

They discontinued this, but they teach you how to change a wheel and how to mount snowchains whilst in the practice-hours with your driving instructor.

> Perhaps today's US driver's licenses are worthless too, and perhaps the

I know the difference, I hold a valid California DL for cars, trucks and motorbikes

>
> Alan AB2OS

This was kind of out of topic. Concerning the amateur license, the test were oral and written, the full nine miles through all the technical and operational questions, for both the CEPT 2 and CEPT 1 licenses. The only difference in testing for HF privileges was the CW test, where you had to send and receive. At my time in the late 80's 13wpm (60 signs per minute), and lateley they dropped to 25 signs per minute, which equals 5 wpm. The test is still held at the Authorities QTH in the state capitals. After the recent workaround of the requirements after the WRC 2003 in Geneva, You are not requested to make the CW test. But you can do it voluntary after seperate application, and as long as the authority will be able to supply CW capable Examiners

Best regards and 73
de OE8SOQ
Helmut

First of all, welcome to ham radio! Always nice to have
new folks join the ranks.

I understand your point of view about morse code. It can certainly be viewed as out of date and unnecessary. I'm an olde fart that remembers travelling to the FCC office to take my test. Personally, I'd hate to see the code requirement go away becuase it was a lot of fun. Certainly a challenge, but once mastered (even at 5 WPM), it opened up an entirely new (to me) way to communicate. Folks that don't learn it are missing out.

Steve W6SSP

I remember the First Phone as being the toughest test. There were a lot of questions about tube type circuits, and I was only familiar with solid state. The amateur tests had been "modernized" with transistor circuit questions, but the commercial tests were on "fifties" era circuits.

I have taken them all at one time or another so can't give you an exact comparison, for my money the advanced amateur was the hardest.

As I cut my teeth on "Hollow State", the tube stuff was easy. You haven't lived until you have a rig with 3B24's emitting their purple glow into the shack.

```

When I took my no code tech license in 1993 I didn't have to do what you did in 1957.

But I did spend years in college attaining a degree in Electronic Technology , learned all about tubes and electron theory, electronics related math, drew schematics, learned about solid state and early digital IC's, op amps, did work study doing bench work at a BSR factory, learned how to repair motracs and radar units in a professors garage shop (he was a ham and the local service guy for the radios the cops used). Moved into the working world in the late 70's , Trained on teletype repair at the Skokie, Il. plant., Worked as an engineering lab tech programming EPROMs and ROM for early electronic control units writing code onto paper tape, used sniffers on networks, Made engineering changes to prototype circuit boards, Worked on repair of mainframe water cooled computers with scopes, meters, and all kinds of magic tools and test equipment, learned personal computers and telecommunications networks, specialized in bus sized high speed laser printers (3800) and 3745 telecommunications boxes, learned how write mainframe code, learned how to write PC code, can fix computers in my sleep. Have a bunch of WORKING self repaired reel to reel tape decks and radios in my garage collection. Fix my own cars. Maintain my own home.

I'm a no code tech.

It doesn't mean I'm a button pusher. Don't treat us like dirt.

Steve

There you go, waving  a 2 inch swantz  around the big boys and crying
because we are not impressed.

Never said you were dirt, I did say your getting a free ride as the result
of those unable to compete, whining long and hard.

As a younger Ham (27), who could have gone no-code, I say keep the code. It's a right of passage, plus the ability to send/receive means multipliers on contest weekends... hi hi.

I know a no-code who can't ground an antenna.

I know a no-code who has built several homebrew rigs that all work marvellously.

The lack of code in liscensing has NOTHING to do with actual mechanical ability, it has to do with REALLY wanting to be a part of a fraternity that can and does do a lot of good not only for the local communtiy, but the international one as well.

While I will agree that the hobby of amateur radio has a shrinking population (due largely in part to what sent you this message... the internet) and needs some revitalization, lessening the requirements is not the way to do it. Why not promote ARES or RACES. Some of the most fun I've ever had was volunteering in St. Charles county Missouri back in 1993 when 2/3 of the county was under water. I got to see a lot of things and go a lot of places that the average "civilian" wouldn't be allowed to go. THAT'S NEAT!

At the same time, younger members of the community should not be shunned as me and my friends were by certain hams just because of our age. We used to get run off repeaters at 3 am on Friday nights because we were "keeping people up." TURN OFF YOUR RIG WHEN YOU'RE ASLEEP!!! We were told it was because of our age... "no 16 yr. old could possibly have a clue." THAT'S NOT NEAT! To this day, there are local hams who won't talk to me when I call "monitoring" on 2 meters just because of who I am... a grudge based on age held for 11 years... ???

At the same time, I"ve made some of my best friends by trolling VHF/UHF (even though HF is my true love). My first directional 10m antenna was given to me by a guy who was impressed that I had a confirmed QSO from Kwajellain Atoll. No I break pile-ups on a regular basis. Thanks Scott.

Anyway... that's my 2 cents...

What difference does it make if a person who pays taxes to support an organization(FCC), doesnt know a tube from a transistor. Why shouldnt they have equal access to the privilages. Most buy an appliance and start putting it to use. You dont need a license to build. There is so much garbage on the air now it wouldnt matter how clean the signal was. Things mutate with time. I have experienced 49 years of ham radio and 99 percent of what i did didnt require a license. Pressing the mic button did, plus being considerate, respectful, and helpful after pressing the button.

> First of all, welcome to ham radio! Always nice to have
> new folks join the ranks.

Thanks for the nice welcome. I do appreciate beeing a ham since the early 70s. Starting within the United Nation Forces in Cyprus and operating the SW-Home Link Station from Larnaca, 5B4ACU was my callsign, it was a real great thing to be able to operate a full Collins S-line also on ham bands. Antenna was a Rhombic with 240 feet each side, directed towards Austria. Back in Austria, I had to pass the exam to get OE8SOQ. Thats for the history so far.

>
> I understand your point of view about morse code. It can

like driving heritage cars and flying oldtimer aircrafts

> and unnecessary.

Is a hobby really necessary?

> I'm an olde fart that remembers travelling to the FCC office
> to take my test. Personally, I'd hate to see the code requirement
> go away becuase it was a lot of fun.

Steve, nowhere in the ITU recomendation is stated, that there must not be any more CW operation on the bands.

> Certainly a challenge, but
> once mastered (even at 5 WPM), it opened up an
> entirely new (to me) way to communicate.

You will still be alowed to stay to your favorite mode, and there will be
zillion of hams out there on the all bands, not only HF, who will share
their love for this tremendouos skill.

> Folks that don't learn it are missing out.

Unfortunately, I've lost a part of my hearing abilities, so for me it is
impossible to do Morse code any more, but i loved it, while I could do it.

Best regards and 73 de OE8SOQ

With modern radios you should be able to adjust it so you can still do Morse. It really ought to be clearer than speech. Or has your hearing bad enough that now you stick to digital?

Dee D. Flint, N8UZE

Helmut, have you tried a transducer put on the side of the head? The
vibrations may do the trick. Or a LED device to do it visually? Or putting
your fingers on a transducer or the speaker perhaps?

Just a few thoughts.

Dan/W4NTI

Hi,
Why not? You can use light. Make a flashing light from audio code
signal. Being deaf is not an excuse if you really want to do it.
73,
Tony, VE6CGX

Thanks for reading my message. I have a good condition, everything works fine, Alinco DR-110T 2 meter Mobile (been using as base). Condition cosmetic I would rate it a 9.5. As I said I have talked on rig, received good reports. Mic however I don't care for, it works fine, however I don't like the way it keys the rig - again, the MIC WORKS, I just don't like it - mic does have keypad.

$135.00 Shipped CONUS

Email directly please db1@dbgeneralstore.com

Also find other ham gear for sale at my website www.dbgeneralstore.com

Isn't that "Special"!!!!!! I can hardly wait to be in the middle of a good QRP QSO and hear some CBer who thinks he is a ham blair in with "Is the channel in use?"

It is nice to know that the good friends at ARRL sold us out! Wonder what 30 pieces of silver will buy these days? Apparently if you are a corporation, it will buy you the priviledge to destroy ham radio! Heck, why require a license at all? That seems like such a bother. Why not just make up a call and get you a radio and jump in "Good Buddy"? I'll bet that for 50 bucks, the "board" at ARRL will back you!

Don't you just hate being in the middle of a CW QRP QSO

with a ham who can't spell? :-)

LMAO! Why thank you BT, and it's nice to know that after what I wrote in
that post, the only thing you could find to bitch about was a mispelled word
:) Cut a little close to the quick did it? HEHEHE!

--... ...--

.- . ....- -.-- .--

Perhaps some kind old general will take pity and interpret the above for you
:)

> the channel in use?"
well, it is common courtesy to at least ask "is the frequency in use" and
then wait a few minutes for a reply. I do so on some of the 2 meter
repeaters here in Phoenix. I give me call, ask if the frequency is in use
and wait 2 minutes. no reply, I go ahead and make my call.

also you, of all people, should realize that not everyone is going to have
good equipment or a hot location when it comes to propogation. So, give
the guy a break, even is he is 'Brand new" to the hobby. attitudes such as
your tend to do mare harm than good.

well, you don't like it? petition the FCC with a proposal then wait the
required number of days/weeks to get it to an RFC (notice of proposed
rulemaking). Try to operate outside of that system, and you will be
ignored (one lone voice in the crowd kid of thing). Use the system, and
you will be surprised at what you CAN get done.

Just my thoughts (having been there and done that...).

Hello, in need of some urgent help. I am having a horibble time soldering the shield of a coax cable to a copper pad in a circuit. I just can't get the solder to flow on the shield. What can i do? I don't know if it matters but the shield has the appeareance of aluminium. I"m hoping this isn't what it is but really dont' know. Please help. Thanks in advance

Aluminum would certainly be hard to wet with tin lead solder. If you
cut the strands, is the inside of each copper colored, or are they

silvery all the way through?

Greetings:

Re the Aluminum coax shield soldering.

If all else fails trim out enough and an inch or so back from the end poke a hole in the braid and fish the inner insulation out and then trim out the inner conductor for it's attachment point to the pcb. and double up the shielding so it can be crimped inside a terminal lug and the terminal lug either screwed to the ground connection or soldered to the ground on the pcb.

RHB

One possibility is that your soldering iron is a little too low in wattage to supply enough heat...this would especially be a problem if the coax shield is heavy because heat dissipates more quickly than the iron can supply it preventing it from getting hot enough to flow the solder. The solution is to get a higher wattage rating iron.

I have also found that sometimes the shield on older or lower quality coax oxidizes and prevent good solder flow. You might try putting some solder flux on the shield before soldering it. That usually solves the problem.

If the shield really is aluminum, you would have to go with a crimp style terminal that could be soldered to the board.

G'day G'day

I am the owner of a Yaesu FT-ONE HF Transceiver, and I wish to perform a complete alignment on it. To do this an extender kit is required. I am wondering if anyone has a set of extender boards they would like to sell. The board in question are:

a.. 14P Single Face extender board P/N D3100002
b.. 18P Double Faced extender board P/N D3100010
c.. 22P Double Faced extender board P/N D3100009
d.. 18Px2 Double Face extender board P/N D3100011
e.. Extender cable P/N T9204357

Alternatively does anyone know of a website, or any articles on homebrewing a set.

Many Thanks in advance

Tony VK2TS

Hi all, I have a Kenwood TH-31AT. This is a 220MHz small handi talkie
dating back to around 1985.
The PL in this radio does not have dip switches on the front panel like
the newer version "TH-31BT"
The PL is inside the radio and the PL is selected by soldering /
unsoldering the pads on the chip.
Does anyone out there have the information that tells which pads to
solder / unsolder for the different PL frequencies??
I have about given up looking for it on the internet.
The PL board inside the TH-21AT (2 meters) and the TH -41AT (440) is the
same as the TH-31AT.
If you have this info and it's not to much trouble can you send it to:
lafayetteRadio@optonline.net
THANKS for your help!!!
73

Best to buy a different phone. But first search the web to find out what
phones have good RFI immunity. Basically, the manufacturer of the phone
didn't bother to design it to prevent such intereference (they are supposed
to but often don't).

Nice HP 141T main frame RF section is 8554L and the IF section is 8552B. Covers DC to 1250mhz. Great for checking bandwidths, harmonics and spurs, you know. Really nice shape, pictures on request. Trade for military HF communications gear boatanchor stuff, also older HF amateur radio gear. Taking resonable offfers.
Need a spec analyzer here is a chance to get a nice one and also open up some space. get rid of that surplus stuff and put something nice on your test bench.

Real nice signal generator from HP 8647A, still supported by HP and has to many features to list but what a machine. I wish they made stuff like this when I was still in engineering. Condition is nice, specs can be found on web. Darn thing goes for big bucks to. I checked out a few sites and it rents for over 300 a month (trivia). Anyway if your looking for a real nice signal generator that has just gone out of production this is it. I am looking for military HF communications equipment in trade, amateur boatanchor HF gear, that sort of stuff. intrested make me an offer. Pictures on request. By

the way you can get a fresh calibration on this unit to NBS standards
pretty reasonalble ie. cheap.

Sadly, the near future is not so bright here in the USA. I suspect it may be five, ten, or perhaps more, years before telegraphy proficiency as a licensing requirement (code testing) disappears in this country. At this point, the FCC (our government regulatory agency) has decided to do nothing until a consensus on the issue is reached within the Amateur Radio community. Clearly, there is no consensus whatsoever at this time. If a consensus is reached, it will take another one to two years for any change to go through our regulatory process. However, since most Americans can be very pig-headed (stubborn), many doubt a consensus will ever be reached. Therefore, many are hoping the FCC will simply give up on the consensus idea, deciding the issue based on what is needed, from a regulatory perspective, to meet the goals and purpose of the radio service. Nothing so far suggests they intend to do that anytime soon.

> (snip) We still support it as a historical

Unfortunately, too many in this country cannot separate code use from the code test. They view the possible removal of the code test as an assault on their CW identity or lifestyle. Another group views the code test as a filter to keep out undesirables ("those people" - a form of bigotry based on Morse code). Still another group views the code test as a solution to this nation's wider social problems (lowered education standards and so on).

Whatever the case, almost all of these seem to forget that code testing is simply a licensing step into what is fundamentally a recreational activity (with meaningful undertones, but a recreation nonetheless).

Take care, Matt. Enjoy your new HF privileges. Perhaps all Amateur Radio operators here in the USA will one day be able to join you, and all those in other countries now without a code test, on those frequencies. If that happens, you can darn sure bet Americans will be among the last in the world to do so.

I'll try to sort it out, Rick. Albert is blaming me for what Clint said and I suspect "FT243" is blaming me for the subject line in this newsgroup thread. I don't think either one of them is actually reading what I've said, at least not without the anger carried over from what others have said. Does that make any sense? If not, don't worry - I'm getting confused trying to figure out what each one is actually talking about also.

Just because its old don't make it useless. Actually it just proves how
useful it really is.

The opinion of the FCC about cw is not relevant. The present crew there
doesn't have a good track record of late. I.E. BPL.

Nobody said Morse code wasn't useful - it's a fine recreational activity. However, when it comes to a licensing requirement, the sole issue is whether Morse code serves a regulatory purpose. As the FCC said, it doesn't today.

> The opinion of the FCC about cw is not
> relevant. (snip)

Really? Since they regulate this radio service (including the licensing requirements), I somehow suspect the FCC would strongly disagree.

Dwight Stewart   (W5NET)

You panty waist crybabys knew there was code in Ham Radio But was to
lazy to learn it.
It would have show the world you at least knew something other then
crying.
But some of you were in the Boy Scouts and learned then What happened
did you brain die?
Code will pass so you can say I'm a ham Wow be proud hold your head
high.
Now we can attack something else or someone.................Seig Heil

Too bad. Your attitude will cause the US to slip one more notch down on the world stage. While the rest of the world gains from expanded comm. You and your buds will keep US citizens from same. Bravo for you. You are a curse on amateur radio, that won't go away soon enough. Sorta like a cancer that will not die till the host dies.

Yep I agree "DO AWAY WITH CODE", it is not worth using anymore, out dated
and just plain hard to learn, do away whit it and we can all be like the
CBer's
10-4 GOOD BUDDY..................

It is not relevant because the FCC has stated many times that it will do
what the members of the ARS want on certain issues. This is one of them.

Cancer? boy you really show your ignorance. Without old timers you would
all be running AM with beep boxes and yelling ten four all over 20 meters.

We are the ones that keep trash like you out of the service. And will
continue to do so.

  BS, Wayne. In case you haven't noticed, Morse code hasn't been a
```

requirement to get a Ham license (the Technician license) for many years. And, during that time period, there hasn't been, based on FCC enforcement reports, any significant increase in "CB-like" behavior on the frequencies used by those Technician license holders. In other words, the "CB" threat just isn't supported by the facts.

Keep it up, Dan. Attitudes like this will certainly increase the numbers of those opposed to your way of thinking. The rhetoric from you and Bruce only makes my goal of ending code testing that much easier.

And, during that time period, there hasn't been, based on FCC enforcement reports, any significant increase in "CB-like" behavior on the frequencies used by those Technician license holders. In other words, the "CB" threat just isn't supported by the facts.

Tho' I tend to agree that the minimal 5 wpm code requirement should be kept(What can I say, I'm tradition bound), a couple of the guys in this thread on that same side of the argument are sounding more like the '50s CB "Channelmasters" than the kind of Hams I tend to respect. You have, at least, kept a nominally polite attitude in your responses. It will be interesting to see what those with the final say on licensing will finally decide, won't it?

Hey, I love traditions also (perhaps more so now that I'm getting older). But, I also realise tradition has to bow to the realities at some point. I simply cannot see code testing being a requirement for Ham radio for the next several hundred years. In other words, it has to end at some point. Since no communications system has been designed in many years that depends on code skills, perhaps now is that point.

> (snip) a couple of the guys in this

Noise and static, Harold. Clearly, some have decided that if code testing dies, Amateur radio should die with it. Some have even said so. In that vein of thinking, they have taken a very destructive approach to the whole issue. However, Ham radio is obviously not going down that easily and we all have to go on together regardless of the outcome of this debate. Therefore, I think it is wise to keep the debate civil.

Since the ITU has now ended the international requirement for Morse code on HF, I think it is inevitable that code testing will eventually end. The question now is when and how that will happen. At this point, we can only guess.

Roland . . .

While my background is a whole lot less impressive, I do remember the 50's.

But, I never saw any fun in; hitchhiking 30 miles to the Customs House in Boston, filling out an application, walking around looking for a free Notary Public (I had no money when I was 16), and back again to wait my turn to take the test. With another trip to Boston to drop the N from my call! . . . I like the way it's done now.

My mode of choice became CW and as I increased my speed, could not afford a bug, so I made (and still use) a cootie key.

I do not want to see a no-code ham radio! For one reason, I fear that the CW bands will be changed or disappear altogether. I would like to see more CW users, and the only way for that to happen is with a code test. Some of those who learn code will find out how much fun it is.

What I find offensive, is the idea that the young people will bully their way into changing a old tradition to suit their "I deserve everything I want at no cost to me" lives. If CW were really dead, I would re-think my opinion.

5 wpm is very very easy!

Ron Crowley, retired tile artisan
W1WBV (the call issued to me in 1952 was WN1WBV)
XYL for 39 years - Pat, KB1FZM.

Uniden Bearcat BC248CLT Scanner 50 Channel Excellent Condition

There's a world of drama out there. And with the BC248CLT scanner, you can stay on top of the news as it happens. Tune into police, fire, weather, emergency, "ham", FRS, Military, Government, and more. 29 - 54MHz, 137 - 174MHz, 406 - 512MHz. The BC248CLT scanner brings together the finest engineering and styling plus all the quality that has made Uniden a legend among scanner enthusiast. The first scanner with integrated Alarm clock.
Features:
50 Channels You can program all of your favorite frequencies.
10 Bands Covers public service, ham, federal and military land mobile.
Review Feature Full frequency LCD display shows frequencies entered into each channel plus weather frequencies. Also includes an emergency weather alert feature.
Manual Channel Access Go directly to any channel without stepping through other channels
Channel Lockout This feature allows you to skip over channels you currently don't want to hear.
Clock/Alarm Displays time and features any button snooze

$65.00 + $10.00 shipping

Kenwood TS-850SAT, TS-140S, ETC.
Someone else started off their "wants" list this way, sounded good to me! If you have a spare HF rig that you are not using, thats in excellent condition, please send me via email your BEST PRICE SHIPPED - would also be helpful to include picture of what you have and accessories. Would like to stick with Kenwood, ICOM, Or Yaesu rigs. Must have antenna tuner built-in or have a external tuner. Mic is not needed as I have a Heil Goldline with mic cable for all listed rigs. Looking to purchase within the next few weeks so hurry please email and I will get back with you ASAP! RIG MUST BE IN EXCELLENT CONDITION BOTH ELECTRONICALLY AND COSMETICALLY!!

SB QST @ ARL $ARLB003
ARLB003 ARRL to Propose New Entry-Level License, Code-Free HF Access

ZCZC AG03
QST de W1AW
ARRL Bulletin 3 ARLB003
>From ARRL Headquarters
Newington CT January 20, 2004
To all radio amateurs

SB QST ARL ARLB003
ARLB003 ARRL to Propose New Entry-Level License, Code-Free HF Access

The ARRL will ask the FCC to create a new entry-level Amateur Radio license that would include HF phone privileges without requiring a Morse code test. The League also will propose consolidating all current licensees into three classes, retaining the Element 1 Morse requirement--now 5 WPM-only for the highest class. The ARRL Board of Directors overwhelmingly approved the plan January 16 during its Annual Meeting in Windsor, Connecticut. The proposals--developed by the ARRL Executive Committee following a Board instruction last July--are in response to changes made in Article 25 of the international Radio Regulations at World Radiocommunication Conference 2003 (WRC-03). They would continue a process of streamlining the amateur licensing structure that the FCC began more than five years ago but left unfinished in the Amateur Service license restructuring Report and Order (WT 98-143) that went into effect April 15, 2000.

''Change in the Amateur Radio Service in the US, especially license requirements and even more so when Morse is involved, has always been emotional,'' said ARRL First Vice President Joel Harrison, W5ZN, in presenting the Executive Committee's recommendations. ''In fact, without a doubt, Morse is Amateur Radio's 'religious debate.'''

The entry-level license class--being called ''Novice'' for now--would require a 25-question written exam. It would offer limited HF

CW/data and phone/image privileges on 80, 40, 15 and 10 meters as well as VHF and UHF privileges on 6 and 2 meters and on 222-225 and 430-450 MHz. Power output would be restricted to 100 W on 80, 40, and 15 meters and to 50 W on 10 meters and up.

''The Board sought to achieve balance in giving new Novice licensees the opportunity to sample a wider range of Amateur Radio activity than is available to current Technicians while retaining a motivation to upgrade,'' said ARRL CEO David Sumner, K1ZZ. Under the ARRL plan, current Novice licensees--now the smallest and least active group of radio amateurs--would be grandfathered to the new entry-level class without further testing.

The middle group of licensees--Technician, Tech Plus (Technician with Element 1 credit) and General--would be merged into a new General license that also would not require a Morse examination. Current Technician and Tech Plus license holders automatically would gain current General class privileges without additional testing. The current Element 3 General examination would remain in place for new applicants.

The Board indicated that it saw no compelling reason to change the Amateur Extra class license requirements. The ARRL plan calls on the FCC to combine the current Advanced and Amateur Extra class licensees into Amateur Extra, because the technical level of the exams passed by these licensees is very similar. New applicants for Extra would have to pass a 5 WPM Morse code examination, but the written exam would stay the same. Sumner said the Board felt that the highest level of accomplishment should include basic Morse capability. Current Novice, Tech Plus and General licensees would receive lifetime 5 WPM Morse credit.

''This structure provides a true entry-level license with HF privileges to promote growth in the Amateur Service,'' Harrison said.

Among other advantages, Sumner said the plan would allow new Novices to participate in HF SSB emergency nets on 75 and 40 meters as well as on the top 100 kHz of 15 meters. The new license also could get another name, Sumner said. ''We're trying to recapture the magic of the old Novice license, but in a manner that's appropriate for the 21st century.''

The overall proposed ARRL license restructuring plan would more smoothly integrate HF spectrum privileges across the three license classes and would incorporate the ''Novice refarming'' plan the League put forth nearly two years ago in a Petition for Rule Making (RM-10413). The FCC has not yet acted on the ARRL plan, which would alter current HF subbands.

The ARRL license restructuring design calls for no changes in privileges for Extra and General class licensees on 160, 60, 30, 20, 17 or 12 meters. Novice licensees would have no access to those bands.

See ''ARRL to Propose New Entry-Level License, Code-Free HF Access''
on the ARRL Web site, www.arrl.org/news/stories/2004/01/19/1/, for
the specific subband allocations ARRL is proposing for each class.

Gee... I thought the last restructuring was to streamline the license classes, get rid of the under utilized 'entry' class license(s), simplify things. Wasn't that the reasoning? Now here we go 'cluttering' it up again.

Lets see, an 'entry' class license is to 'give people a taste' of ham radio, see if they like it, sort of an 'easy start' license, right? Seems like I've heard of that before (a few times, actually). Wasn't that what a couple of the licenses that got dumped in the last restructuring were? And by all means, lets give that 'entry' license a glitzy name so no one will recognize it for what it is, wouldn't want to make it obvious, would we? Make it easy for others to distinguish between them and the other licensee's? I mean, you wouldn't want to be able to 'point a finger' at operators who are out of bounds, for instance.

To me, an 'entry' class license shouldn't be 'for ever', there should be a reason to up-grade, right? How about making it for a limited duration, and non-renewable? Hmmm, where have I heard that before? (But you know what, it worked! Oh well, that's a good reason not to do it that way again, isn't it?)

What's the matter 'Mr. ARRL'? Not getting that 'huge' influx of new hams to buy your magazine? Don't you ever learn anything? How about doing what you're supposed to be doing? Hey, that would be a refreshing change!

'Doc

Pretty much agree with Doc, altho, after the last "restructureing", the
value of a
license is worthless! And now, the league wants to degrade it even more ??
Why even have a test?? Just issue licenses on the back of cereal boxes, or
inside
Cracker Jack boxes, or like about 45 years ago, when Popular Electronics
issued
their SWL calls (Think mine was WPE7AYQ) !! Or, even better: Lets auction
off
ALL THE SPECTRUM, for amateur bands to the highest bidders, and balance our
federal
deficit! Then we can ALL share the blissful 40 channels in the eleven meter
band!!
Maybe, also all those free band channels, up to, and sometimes includeing
the CW segment
of 10 meters!! Yeh, that the (pardon the pun) TICKET !!   NN7K Jim

The only value in a license are the privileges granted. The privileges granted haven't changed appreciably. I had full access to all ham bands in 1953 and I still have full access to all ham bands in 2004. I lost 11m and 220 MHz but gained the WARC bands. The value of my license is very close to what it was in 1953.

We will determine the true worth, when the next set of rule changes,  will
allow ARRL to auction licenses on E-Bay.

>
> The ARRL will ask the FCC to create a new entry-level Amateur Radio
> license that would include HF phone privileges without requiring a
> Morse code test. The League also will propose consolidating all

> current licensees into three classes, retaining the Element 1 Morse requirement--now 5 WPM-only for the highest class. The ARRL Board of Directors overwhelmingly approved the plan January 16 during its Annual Meeting in Windsor, Connecticut. The proposals--developed by the ARRL Executive Committee following a Board instruction last July--are in response to changes made in Article 25 of the international Radio Regulations at World Radiocommunication Conference 2003 (WRC-03). They would continue a process of streamlining the amateur licensing structure that the FCC began more than five years ago but left unfinished in the Amateur Service license restructuring Report and Order (WT 98-143) that went into effect April 15, 2000.
>
> ''Change in the Amateur Radio Service in the US, especially license requirements and even more so when Morse is involved, has always been emotional,'' said ARRL First Vice President Joel Harrison, W5ZN, in presenting the Executive Committee's recommendations. ''In fact, without a doubt, Morse is Amateur Radio's 'religious debate.'''
>
> The entry-level license class--being called ''Novice'' for now--would require a 25-question written exam. It would offer limited HF CW/data and phone/image privileges on 80, 40, 15 and 10 meters as well as VHF and UHF privileges on 6 and 2 meters and on 222-225 and 430-450 MHz. Power output would be restricted to 100 W on 80, 40, and 15 meters and to 50 W on 10 meters and up.
>
> ''The Board sought to achieve balance in giving new Novice licensees the opportunity to sample a wider range of Amateur Radio activity than is available to current Technicians while retaining a motivation to upgrade,'' said ARRL CEO David Sumner, K1ZZ. Under the ARRL plan, current Novice licensees--now the smallest and least active group of radio amateurs--would be grandfathered to the new entry-level class without further testing.
>
> The middle group of licensees--Technician, Tech Plus (Technician with Element 1 credit) and General--would be merged into a new General license that also would not require a Morse examination. Current Technician and Tech Plus license holders automatically would gain current General class privileges without additional testing. The current Element 3 General examination would remain in place for new applicants.
>
> The Board indicated that it saw no compelling reason to change the Amateur Extra class license requirements. The ARRL plan calls on the FCC to combine the current Advanced and Amateur Extra class licensees into Amateur Extra, because the technical level of the exams passed by these licensees is very similar. New applicants for Extra would have to pass a 5 WPM Morse code examination, but the written exam would stay the same. Sumner said the Board felt that the highest level of accomplishment should include basic Morse capability. Current Novice, Tech Plus and General licensees would receive lifetime 5 WPM Morse credit.
>
>

> ''This structure provides a true entry-level license with HF
> privileges to promote growth in the Amateur Service,'' Harrison said.
>
> Among other advantages, Sumner said the plan would allow new Novices
> to participate in HF SSB emergency nets on 75 and 40 meters as well

Unfortunately, there are far too many for whom the value of their
license is measured in how many people it allows them to look down
their noses at. Their only motivation for moving up was so they could
gloat over how much better they are than anyone that isn't up to their
standards. This is also the primary reason that contests and awards
are rubbed in our faces in most of the magazines and newsletters. This
is the crowd the ARRL has been cutivating for years, because they
don't care about advancing the state of the art, or building their own
equipment, helping others, or any of the other aspects of the hobby
that used to make it great. They simply want to buy the newest,
coolest, fanciest or most expensive rig to help them along on their
ego trip, which keeps the advertisers happy.

Somebody let me know when QST no longer has any contests or award
notices in it. Then I *might* be interested in looking at it again.

Bob McConnell

I disagree with your premise Bob, I hope that you are not so insecure with your manhood that you would find the success of others a threat.

Many of us older farts strive for excellence, we use various means to measure how we compare to others. Do not confuse pride in accomplishment with ego.

In spite of what the feel good types tell you, competition is a basic human instinct. Keeping score is the way to quantify the competition.

To distain the accomplishments of others as "ego" is both supercilious and lacking in the basic understanding of the human condition.

At 6'4", I don't usually need a ham license for that. :-)

I have very little problem with my manhood. I have a son with a Master of Music (Education) that is a respected teacher. He has a lovely wife and three wonderful children. I have a daughter with an accounting degree that manages a billing department responsible for preparing invoices totalling nearly $30M last year. I have another son at Fort Brag NC in special forces training, and a third son learning the construction business from the ground up. I survived 2 trips to Vietnam on a US Navy destroyer. My wife (also a Navy veteran) and I are approaching our 31st wedding aniversary. Any of these acomplishments are far and away more important than any award or recognition available from amateur radio.

My problem, due to a number of hams of all ages I have met both in this area and elsewhere, are those that use their ticket, awards, contest status or shack as their primary means of identifying who they are and how necessary they are to the hobby. Maybe they never learned what is important, or just don't have a life. Maybe that's what all Ivy Leaguers are like (most of these are from Cornell). But they sure seem to be in the majority in this hobby. And it appears that most of what the ARRL has done in the past several decades was simply to encourage them with more wallpaper to brag about.

Yes, I know there are others out there that are more like you claim to be, and without them, this hobby probably would have died out years ago. But around here they are few and far between. I know of at least two clubs in this area that don't have any. (Actually, one of them did have two, but one got called up and sent to Iraq two years ago. Then the other got frustrated and left the club.) Neither of those clubs does any public service events, offer any classes or do any demonstrations or open houses. Their planning for field day sounds more like preparation for war, and outsiders are not welcome. They are so self centered, that they won't even talk to newcomers until they know how they stack up. That means they still won't talk to some of us that have intermittantly attended their meetings for over three years. I know of three hams that flat refuse to attend their meetings any more. One of them sold all of his VHF and UHF gear so he wouldn't even have to listen to them on the air. He focuses entirely on HF DX.

I hope conditions are better in your area.

You Sir have the opportunity to corrct all that. The beauty of Ham radio is that anyone can start a club.

Maybe it's time you do so and correct all the ills you have observed.

Remember every one has a purpose in life, even if only as a bad example. Now that you know what NOT to do, the rest is easy.

They Pissed and Moaned when incentive licensing hit...

And they still Piss and Moan when non-incentive licensing hits..

what goes around, comes around...

Pete

Yeh, BUT-- Moby, Michael Jackson, and, Eminem, and Bono, WITHOUT the degree (and, probably without even a High School deploma)! are Beating your son, meanwiile,

Former ENRON accountants, are running circles around your daughter! Shall
we sink
ALL STANDARDS? (Got an idea: Lets legalize BANK ROBBERY, as those that
commit it
need the dough for their attorneys-- too many murders? simply legalize them
as an act of
MERCY!! , ect. Why have ANY standards?? Do your own thing! Granney (at
age 56)?
yeh, send her over Niagra Falls? Yeh that the ticket! When you fail to
jump over the bar,
lets just eliminate the BAR!!   That (Unfortunatly) is what has been going
on for too many years!
Jim NN7K

Jim,

I've been curious about this since I first saw your response. Who's left field have you been playing in?

If you really want the ham license to mean something, forget code, voice, rtty, packet or any other mode, obsolete or current. Require everyone to pass an oral exam in front of an FCC field engineer which includes assembling a QRP transceiver from a pile of parts on the desk, a soldering iron, wire cutters and a couple of terminal strips.. That's the only way to bring respectability back into the hobby. Anything less is no more than a super CB license.

<end sarcasm>

The only requirement for a ham license should be the ambition to study
enough to pass the test. The ability to use an obsolete mode should
have nothing to do with it. Of course then you end up with people with
no respect for the rules, no courtesy or no manners, and that might
even disagree with you. But how is that different from what we have
now?

Bob McConnell

HUH? Most FCC "engineers" can't pass this test! They have EE's which have nothing to do with assembling QRP rigs. They don't teach soldering in school. Get a life.

There aren't many of those guys (FCC "engineers) left in the Commission,
since Uncle Billy and his henchman ALGORE, reinvented the Commission,
and layed off 75% of the Field Operations Folks. Better look for some
other folks to admin your goofy exams and build your QRP Radio's.

I suspect that Bob McConnell is being facetious with his suggestion about building a QRP rig as part of a ham examination.

whell here is my two and a half cents worth.

i am just a newbe (less than one mo).
i do not know code at all, but i am working on it,
i would rather not have to know it as too much to do these
days to keep on and trying to studying so i can work it at a
good rate, it is hade to find time some weeks.
but do not want to see it go away as it looks like a decent way
to yak to someone else.

but do not realy see a need for knowing code just to use parts
of the radio waves.

when i go for my general i plan to know some code, but not sure
if i will have a need for said.

If you can't build one from a few parts and get it on the air, you don't deserve to be called a ham.

Any CBer or welfare ham can turn on the latest, greatest, Kenwood.

If you have even the most rudimentary understanding of electronics, you should be able to build a transmitter.

How about something as simple as a crystal, a digital hex inverter and some wire and a couple of capacitors?

Whoops! that requires knowledge not gained from memorizing a set of questions.

Mores the pity! There have been no real hams since the FCC stopped giving the exams. If that pisses people off, please take note of the mistletoe pinned to my coat tail....

Thats very well put. If I have to take a code test, then why dont the
Business Band, Radio Stations and all other commercial licensees?

Im not going to do code, so therefore I shouldnt be required to take
it to talk via phone.

Business Band operators don't have to take any test. Just pay money for a license to operate on a fixed frequency with a limited use FCC certified radio. So different from Ham radio I don't see how anyone can even compare the two services.

Ed

Hey Bob,
I get QST...always have. The contesting stuff doesn't interest me, so I just ignore it. Occasionally I'll see a familiar call and think "hey, I know that guy", then move on.

I was beginning to wonder if anyone caught that. The initial suggestion was that a ham license was worth less after the last restructuring eliminated half of them and reduced the CW requirement. My sarcastic reply was that if they wanted to revert to a time when the license was more difficult to obtain, they weren't going back far enough, but should revert all the way to the era when only an FCC engineer was qualified to test and issue licenses. Then add the assembly to really separate the hams from CBers that can memorize the text book.

Apparently, high schools no longer teach sarcasm as a literary device. Even my pseudo HTML tag didn't clue them in.

I am curious about one thing. In 1977 I took the FCC test series for the commercial phone license. I breezed through third class and passed the second class elements, but missed first class by 6 points. If I had turned around and taken the amateur tests at that time, without the code requirement, what license would I have ended up with?

I'm looking for Pioneer PR7820 laser disc players. These players were used in GM dealerships for training and showing off the new line of GM cars. They were also used in Dragon's Lair arcade games. The players need not be in working condition but should be complete and unmolested.
If you have any you want to get rid of please e-mail me at this address pr7820@yahoo.com
Please let me know if you can help.

I've recently just become interested in ham radio. I'm 22 year old college student with somewhat limited funds. I've heard of people building radios. Is that something you can do with just instructional books or is that something only advanced people do? And what kind of radio would be good for somebody like me, just getting into it? Thanks for any and all help.

Ranger AR 3500 For Sale. Asking $125 OBO. Unit powers up and
everything appears to work fine, but I don't know much about these
radios and do not have a means to fully test all the functions.

Please email for photos and more information.

Ken

Hello Jason, if you are not licensed as of yet then that would be the first place to start, get your tech license and that will allow you to talk on 6 meters and up which would include 2 meters and 70 centimeters where there is alot of activity due to the use of repeaters stuff like that. however activity will depend on your location.
There are alot of do it yourself radio kits available but for what they cost you'd prolly be better off trying to buy a used hand held or mobile radio, but building is a great way to learn about electronics but i don't know if it's the best way to start..
check out www.arrl.org for all the info you could want on getting your amateur license and do a search for local clubs in your area, they will most likely be able to direct you in the right direction.

whatever you do I encourage you to get your license if you don't already and upgrade as far as possible. upgrading and getting on the HF bands where world wide contacts are possible with a piece of wire and 5 watts is a very cool feeling, plus to be HF is 90% of amateur radio..

I will do that. Thank you for the help. Is there any study guides or
books you'd reccomend as far as the tests go?

Oh, and I forgot one of the most important questions: what kind of
radio should I buy? I have no idea what to look or ask for, or even
where they sell them.

www.arrl.org has info on buying study guides, i'm not sure but radio shack used to sell a study book also. your going to be looking for something that will get you your tech license..

> Oh, and I forgot one of the most important questions: what kind of
> radio should I buy? I have no idea what to look or ask for, or even
> where they sell them.

you can check out www.ebay.com for new or used gear.. depending on how much money you want to spend you should look for a nice dual band or single band hand held or mobile radio.. look under the ham radio catigory.

do you use AIM, Yahoo, MSN or ICQ? if so, lemme know how I can contact you, maybe we can talk one on one..

Study guides are available through the ARRL at www.arrl.org. For the Technician license, "Now You're Talking" is the book that you will need. They also have study guides and material for the General and Extra class licenses.

As far as radios go, the ARRL study guide has some info on that even though that is not on the test.

As a Technician, you will have full privileges on the VHF and UHF bands. I would recommend starting with a mobile VHF/UHF radio. These are FM only and primarily good only for local communications (and packet radio, a digital mode) unless there is a major band opening/ Good brands are Kenwood, Yaesu, Icom, and Alinco.

To fully explore the Technician privileges, you may eventually want an HF/VHF/UHF all mode radio so that you can work sideband on the VHF and UHF bands. This can give you a lot more range. Plus when you upgrade to General, you will already be equipped to use the HF bands. Good brands are Kenwood, Yaesu, Icom, and Orion.

I recommend that you join a local club to get advice on licensing and on radios. Different radios have different combinations of features and it is difficult to say what might suit you.

To find a club in your area, check the ARRL website. If that doesn't show anything, do an internet search for amateur radio for your location. That's how I found a new club when I moved.

Dee D. Flint, N8UZE

Yep you is right
```

DX shud be at   rec.radio.amateur.dx

There are guidelines as to what Ham topics go where -- at URL:
http://faqs.jmas.co.jp/FAQs/radio/personal-intro

But being NG's are mostly unmoderated -- folks put their for sale items on
all of them.
As well as the OT political rants. Oh well.

Playing NG cop will do little good -- at least it hasn't for the past 4
years (;-(

Have you seen poker on TV and want to get in on the action? Do you
already play but want a great bonus?  The Gaming Club Poker room will
give you up to a $200 bonus on just a $20 deposit.  The bonus is given
to you in $20 increments as you play more hands.  You will get a total
bonus of $200.  See the link for details.
http://www.gamingclubpoker.com/promo/15free/index.asp?s=aff90044
You will also get an entry into a rookie freeroll tournament with a
$5,000 prizepool.
Hundreds of thousands play here everyday, it is totally safe and
secure.  The cashouts are quick, and they also have many tournaments
that you can play

Hi,
  Anyone familiar with this portable radio? It is transisterized and
without batteries is heavy. It has a dial under the volume dutton
labled "MCG".
Thanks,
Mike

I concur on trying to find a club...it would be much easier. I was a Ham in the 1980's...Let it slip, and am just coming back. I studied using some online resources, and you can download the "Pool" questions from the ARRL.ORG site. These are the entire question list from which they make the tests..It is a good excercise, once you study, to see what you know....Don't memorize them, but try to learn by them.

As far as building equpment, the best way is to look for QRP equipment. QRP is low power .1 - 5 watts or less. It is usually restricted for the HF bands (80Meters, 40Meters, 20Meters - all below 30 Megahertz). The VHF-UHF stuff gets tricky to build because it is higher frequency.

I have purchase lots of stuff of ebay. Most of it is good quality. My experience is Amateur Radio Operators are a good bunch, and rarely will you get stuck with junk. If you go for the TECH Exam (No Morse Code), look at a 2 Meter or 440 Rig. I have seen them for around 50-100 bucks. Also check out eham.net. They have a classified section. Because VHF/UHF stuff is line of site, you usually use this equipment with a repeater. A repeater is a receiver/transmitter on a tower or hill, that receives your signal, and retransmits it on a different frequency. Your transmitter has an "OFFSET" switch (600 Kilohertz for 2 Meter) that automatically send your signal on the right frquency. You then listen on a different frequency. I have purchase 2 Meter HT (handi-talkie) for about $50.00.

To talk globally, you will want to get on the HF bands. That takes learning Morse Code at 5 Words Per minute. It is pretty easy, and there are tons of learning tools on the Web. I downloaded several, that let you cut and paste text into, and plays morse through your speakers. The ARRL also has Code Lessons, that let you learn. Once you get your 5 WPM Code, you can talk on the High Frequency ham bands...Then you can build and use that neat QRP equipment I talked about.

Also, every June, they have "Field Day". This is an emergency excercise, where clubs and indivuduals set up portable equpment and make contacts. It is to prepare for emergencies, but is also a social event.

This is really a good hobby. I don't know if you heard, but my local CBS affiliate in Los Angeles talked about HAM RADIO helping out with Hurricane Charlie relief efforts. The Cell Phones, and Phone Lines are down, but Hams with Portable equpment are providing emergency comm's in the area. Let me know if you need any additional information, I would be glad to provide it.

I didn't think you could reverse a payment from a confirmed PAYPAL member. I am a confirmed member, and the payments go straight from my bank account. I use a Credit Card for a backup. Why does PAYPAL allow this? If that is the case, I will not use it, or get my money before shipments. The whole idea of PayPal was a secure means of exchanging money.

Guess I learned something.

Now it is SELLER BEWARE. His promise of paying doesn't mean squat, until he dishes out the money.

One I use exclusively, aside from the ARRL DX Bulletin is the
Ohio/Penn DX Bulletin (more extensive than the ARLDX bulletins).

Ohio/Penn DX Bulletin: http://www.papays.com/opdx.html

Both can be read on the WWW or received through e-mail.

I have a Yaesu FT-530 with the MH-29 hand mic. I have had the
rig for several years and it has been very reliable.
Recently however I have begun having troubles with the MH-29.
First, one morning I turned on the FT-530 and discovered that
the button on the MH-29 that up to now had flipped between 2 meters and
440 now was changing the frequency of the tranceiver. I do not
have the manual for the MH-29, and so I do not really know if something has
become mis-mapped, or if this is difficult to resolve.
About a week ago the PTT switch on the MH-29 began to work intermitently.
There seems to be no clear pattern, and it does not appear to be
caused by the cable. Any insights or pointers into the resolution
of these difficulties would be sincerely appreciated, or
perhaps it is time to track down a replacement? Thanks in advance!

Many nice clear pics.
All items are real inexpensive.
No Junk here folks, all exactly as described.
This is my entire list on Ebay.
You may want to check others while you're there :-)

I have, for sale, a Yaesu FT 890 AT all mode ham radio tranceiver. All features are 100% functional and in great condition. Included with radio are: Original hand mic, 12 VDC power cord, mobile mounting bracket, operation manual, and complete service manual. Radio also has CW filters and has been modified to allow MARS operation. Great first radio and fantastic for use in the RV. First $450 takes it. Call Rick @ (602) 438-8325

I passed my Element 2 exam last week and am eagerly awaiting the posting of my Tech ticket on the FCC site. In the meantime, I have been doing research on radios. I have considered as many factors as I know of, including TX power, physical size, and portability. My needs have led me to look for a good handheld unit. Before anyone chimes in with a recommendation to go for a mobile, let me say that being able to carry the radio with me wherever I go is a must, which rules out mobiles.

I am looking for opinions about HTs that cover the 2meter and 70cm bands and have at least 5 watts output. I value the opinions and experiences of other hams, so I figured that these newsgroups would be a good place to solicit them.

Please either post your opinions here, or feel free to email me at "entrekin-at-iname-dot-com" with the appropriate symbols (low-tech anti-spam measure). I look forward to getting lots of input!

Thanks,
Andy Entrekin
Bedford TX USA

For any of you who frown on cross-posting:
Sorry for the cross-posting, but I wanted to get as many responses as possible. If I hadn't cross-posted, I would have just copied this same message in to each post to a single group. This just seemed smarter.

I haven't bought a new dual-bander recently, but I love my Yaesu FT-530. It has been bullet-proof. I have dropped it, overheated it (both internally and with sunshine on a car seat) and it keeps coming back for more.

Based on my experience, you should have
    -- a radio with external 12V power input
    -- a radio has a detachable antenna (BNC mount probably best)
    -- an external speaker/mike for your radio (I think they all accept one.)
    -- a repeater directory for your area (or find one on the Internet)
    -- at least one outside antenna cabled into a favored operating location (2M j-pole also works on 440)
    -- a holder for your HT that props it up on a desktop or bench
    -- an accessory battery for long-term worry-free portable operation (Gel-cells are good.)

5 watts on VHF/UHF will generally take you out to the radio horizon, or to a high-level repeater even with a rubber duck antenna. The outside antenna will help you QSO with low power stations or somebody with a bad antenna.

Welcome to the amateur ranks.

I like my Kenwood TH-D7a, which gives me essentially two radios in one (as opposed to a single radio that can be on one of two bands) plus APRS and packet capability.

Congratulations on your ticket!!!!!!!!!!
I agree, the FT-530 is a GREAT radio!! Also, check out the Alinco DJ-580T. Almost the same and built like a tank also! These are older radios and a bit larger.
This is not a bad thing! They usually have louder speaker audio than the tiny HT's of today, although the Alinco DJ-580T has the edge on speaker audio. . One more favorite on mine is the Yaesu FT-50R. It is smaller than the other 2 and works great with LOUD speaker audio. This is a dual band radio but one band at a time. The best part of all, these radios can be gotten at a good price that won't kill you!!

There are any number of good radios out there, a lot depends on personal
preferences.
```

But, the one thing I urge you is to invest a few more bucks on a telescoping antenna. For less than 20 bucks, you'll double or more your effective power, plus improve your reception, as compared to the rubber duck that comes with most HT's.

Of course, the telescoping antenna will be a bit more bulky than the duck, so that may or may not be a factor for you, depending on how you intend yo use the radio.

Indeed.. The duck that comes with the Kenwood TH-D7a is by far the WORST
antenna I've ever seen.. A comet SMA whip tripled my range.

The other thing that's a big range booster, is a "tiger tail", which is
nothing more than a 19" wire and a lug to fit under the antenna connector..
This provides a counterpoise for the antenna, and acts as a crude dipole.

With a good antenna, you will find that the 5W setting is rarely needed, and
mostly just chews up batteries.

I have the TH-F6 and it is a Tribander for around $300.00 you can't beat it.
I get around 16hrs per battery charge

my 2 cents

Don't blow all your cash on an HT. By all means get one, but save some dough for a nice starter rig like a Yaesu FT-857 or an 897. You'll get all-mode on a lot of bands for not a ton of cash.

Kudos on your ticket!

Well you did get many very good comments. I won't repeat any.

I have the TH-F6. I can't compare features, but what I think can be important to you:
* You can get an AA battery pack for when your Li=Ions are dead in an emergency, or you are too poor to afford new ones (Tx power lower however)

* I believe it has the widest general coverage available for a "dual bander".= 100 KHz to 1,300 MHz. AM , FM, Wide FM, U/L SSB, CW. You name it (except the CW beacons on 902 and 1296) and you can probably listen...TV, CB, AM & FM broadcast, FRS, GMRS, Aircraft...wad-I-miss?

Fine tuning on HF down to (sort-of) 33 Hz.

* It does 222 - kinda rare. Lets keep the band alive!

* It is pricy, but it is around a very loose rule of thumb for cost of 'about' $100 per band.

* Better antennas are available. I have a 19 inch for mine, when needed.

5W,   .5W,   .05W on internal

5W,   2W,   .5W on external 12 V sig lighter plug avail.

I forget the double A power, possibly 2W, .5W, .05W

The beeps are pretty "blind-friendly"

Disadvantages (to some - I'm ok with it)
* SMA Antenna connector.
* It doesn't receive FM below 29.7.
* Doesn't receive CW & SSB above 470MHz (See beacon comment above, but AM or FM "works").

True for most HTs, and a very good idea.
I have AA packs for all my emergency gear, and I keep a stock of batteries
in the car which I rotate out into the kid's toys periodically.

Andy,

Congrats!   I have two I recommend, will give the drawbacks to both.
ICOM W32A, very good radio, short battery life transmitting on high power 2 hrs max 50 % cycle, 5-7 hrs listen on NiMh, direct battery charge from wall wart and will run off of wall wart has built in charge controller, excellent output, dual receive, weak audio, dual scan (memory and frequency), dual independent vfo's, direct frequency input, v-u, v-v, u-v, u-u, splits, cross-band repeat, weather, 100-999 M. receive except 220; easy to program can be programmed off a computer with cable and sw, 200 memories total split between U and V, onboard instructions, alpha numeric display, new around $250, haven't seen one used.
Kenwood TH-77A, a little harder to program than the ICOM (manual only to one memory bank), older model, dual band, dual receive, outstanding audio, dual scan (memory and frequency) v-u, u-v, u-u, v-v, I don't know if it will crossband, receive 130-500 (I think it can be extended but VFO's are tight, not as flexible as the ICOM), excellent battery life 12-14 hrs on MH PB-8 metal hydride batteries, only 40 memories, direct frequency input 2m drops first digit, will run off of wall wart (dc jack) but not charge battery (external only), outstanding front

end and transmitter very solid, I have 2 of them both used for $100
each, no weather or air receive, not computer programmed, my knock
arounds very rugged, one is my base, the other I carry every day
around the yard, truck, etc.

Congrats on the new ticket! I just got mine Tuesday, so I was in the same spot last week. I settled on the Yaesu VX-5R, and got a Diamond SRH77CA antenna to go with it. I picked it because it hit the sweet spot on price/performance for me, and it seemed to get the best reviews on eHam.net. I love my Icom R71A, and was really looking for another Icom, but they all seemed to get picked on for pricey accessories and susceptability to intermod.

Seriously though, it looks like almost all the HTs in the $200-$300 range are pretty good, I've since had recommendations for the Icom W32A and the T90A. I think anything that can put out five watts on 2M will make you happy, all the rest is just flavor.

73,
-- Tracy Nelson, KC0SZW

I went with the VX-7R which is a little more money, but worth it to
me. It has a good LI-ion battery that does well and runs a reasonable

power.

>Seriously though, it looks like almost all the HTs in the $200-$300 range
>are pretty good, I've since had recommendations for the Icom W32A and the

I think the W32A is one of the best duobanders put out. Good enough that after it was discontinued there was still enough consumer demand they brought it back and it's been back over a year. The W32 is really from an earlier generation that is quite a bit larger than the VX-5 or 7. For those of us who wear bifocals that is not all bad.

I happen to like the little Yaesu radios, although the VX5 and 7 are not really Yaesu. They are listed with them and maybe built by them, but the name plate lists a different name. Mine's in the car and I don't remember the new name.

I have a complete set of the Diamond mobile antennas with both mag and lip mounts. Well I did until my wife drove into the garage without lowering one.

I use the large one on top of a 4-runner and have had it ever since they hit the market. It has hit a few bridges and parking ramps knocking the whole thing off the roof, but it still works fine on both 144 and 440. (That is one tough mag mount). I did break one though.

Yaesu just introduced the FT-60R handheld that meets your requirements
- it is a great HT for $200!

I still don't get what the big deal is all about. I've yet to be with
a woman who had any trouble enlarging my penis whenever she wanted to.

This guy's mistake was opening his mouth. He should have simply tracked them down and launched his campaign. No violence, merely anonymous harassment.

Make sure you read the data sheet first if you're thinking these might
make good general purpose amps! Those MMICs are only for the cellular
frequency range--minimum freq of 800MHz.

Posting this for a non-newsgroup amateur

Wanted: Interface cable from Yaesu FC-757 tuner to Yaesu FT-980 transceiver

If you have one of these cables and would like to sell it please contact
Paul - N0PL - at plinnel@nemontel.net

Thanks for the help

K7SAM

I have a new in box Motorola M1225 LS 25-40Watt Mobile Unit, MINT/UNPROGRAMMED. still with mic and clip, hardware, manual, and safe op manuals. The split is 450-470 UHF. Never programmed. Photos upon request
Model # M44DGC95A2AA
asking $275.00

With whip rubber duckie, Kenwood rapid charger and 1 good battery.
I will sell for $90 shipped CONUS. Photo upon request

Also for sale, cleaning up:

I was given a new RS pro-96 for a present. We do not have digital here. I am selling it since I already have a BC780XLT. The package is complete from RS, box, manual, antenna, clip and regulated external PS. I will sell the package for $475 shipped. POSTAL MO only.

Also, 1 pair (2) Motorola 2 channel Radius P110 with 1 good battery (new one costs $30) ,
antennas, 2 chargers.

Model #'s P44QLC20A2AA

Asking $220 for the set OBO

Photos of
all units available. Postal MO preferred. I do not use paypal. I will consider COD if paid by buyer.

I am looking for a excellent condition Garmin GPS III + If you have one that you are not using, I would be interested in hearing from you. I do have a few items that I could offer up for trade + some cash if needed for the GPS III +.

They are as follows:

Heil HM-10 Microphone Excellent Condition

PK-232 MBX
A Cannon Digital Camera

Any of these items may be offered in full or partial trade for your GPS III +. If interested, please visit my website below.

Please let me enlighten some of you "youngsters" and some rather lazy ones I might add on what us "oldtimers" consider ham radio really is. Amateur Radio is truly changing .... right. It truly started with a Mission Statement to serve the public in case of emergency. It's become a super CB'er gab medium "legally" allowing more distance and power.

1) Back in the mid 50's we had to travel to an FCC office and pay a few bucks to take a supervised exam both written and International Morse code. Under those non VEC conditions I received 4 full college college credits for my General Class license that to this day appears on my transcript from Univ of the State of NY.

2) Back then ALL us hams read thoroughly the ARRL Amateur Radio Handbook, some of us built our first receiver (usually super-regenerative) others purchased our receiver but definitely we all built our first transmitter from "junk" parts or purchased a kit.

3) In keeping with the Amateur Radio Mission Statement us "old timer real ham" ultimate dream was and still is today to possibly someday save some lives of public that may be in distress by monitoring one of the international distress frequencies almost daily.

4) For those of you interested try some of these links for ideas to set up a schedule.
http://www.tpub.com/content/istts/14225/css/14225_25.htm
Because of propagation skip I monitor at home here in Phoenix:

* 500 kHz -- International CW/MCW distress and calling (Because I do copy CW 60+wpm)
* 2182 kHz-- International voice distress, safety, and calling (Thanks to Ham radio I speak 6 languages fluently and 9 more broken enough to pass an urgent message)
* 8364 kHz-- International CW/MCW lifeboat, life raft, and survival craft (CW proficiency plus past USN enlistment)
* 121.5 MHz-- International voice aeronautical emergency (am licensed private pilot - single engine/land)
* 3023.5 and 5680 kHz-- International SAR frequencies for the use of all mobile units at the scene of a search. Also for use of shore stations communicating with aircraft proceeding to or from the scene of the search. CW and voice. (I am involved in Search & Rescue being member of volunteer branch of local Sheriffs Department and a private pilot)

5) In case some of you "modern VEC hams" aren't aware a signaling device capable of CW can be made from something as simple as a "back wired" cheap transistor broadcast receiver capable of signaling a monitoring "old-timer antiquated" ham like me to summon help thus saving lives. I have to date logged nineteen (19) actual distress calls since 1954 including 9 merchant ships, 4 military aircraft, 2 commercial pleasure cruisers, one 52 ft pleasure sailboat in S Pacific, and 3 lost private aircraft. Most have been "CW" and only two were AM voice. Lets hope that if you happen to be among survivors of a disaster there is a "real old time ham" available that can from the most simplest "junk" signal for help to another "real old time ham antiquated" just in case your $3000 SSB transceiver is damaged beyond toast and unusable. (hihi)

It never ceases to amaze me that you die hards seem to think that the only thing not damaged in a distress situation will be your modern technology transceiver (of which I have three).

6) Lastly: Believe me I have spent my share of years "ragchewing" SSB, SSTV, ATV, AM, packet (both landbased and with space shuttle), but mainly daily my specialty is mucho, mucho CW. Man I do love it!!!

Summary: Well, if you have read this thread this far you must know that I know my xyl and I are excessive because we can signal with a flash lights, automobile horn, and even with semaphore, etc. Repeating Amateur Radio's Mission Statement deals first with the commitment to aid the public in case of emergency and secondly with self pleasure. I personally don't feel a person should be able to call themselves a "Amateur Radio Ham" if they can't from the simplest means be able communicate with others in an emergency situation to offer service to the public. A lot can be done with just 5wpm CW by signaling with horns, lights or a simple "dirty" (spurious) transmitter. We recently had a ham with a flash light AND a mirror that did not know simplest CW go as far as setting an entire forest on fire destroying property and homes to signal a helicopter for help. Dumb!!!!

No, my friend CW will never be "toast", thank god for the lives that have been saved in the past and will be in the far future centuries to come and forever. You and others like you definitely won't be a part of it though ....unless you change your attitude. Nothing will ever replace it because it is so basic and simple!! Unfortunately many hundreds or even thousands have been lost because of not knowing this simplest means of communications .... International Morse Code. Some old timer friends and I have been working on a transmitter technique using natural surrounding minerals using damp tree branches for an antenna and without using batteries, tubes, or transistors, that generate legible spurious noise heard by any sensitive receiver for signally .... that is by CW, of course, sorry no USB/USB or AM!! (HIHI)

I want to be a doctor but why should I have to take those tests for.
Lets get rid of thoses tests.

The Man said it all only those cry babes that are to lazy to learn
something new. Get a Life If you dont like learning code then go to
the Internet or CB..........

Incorrect analogy.

Here is an appropriate one; if I want to become a doctor in society TODAY, as in, right now, the time that I live in, what's the point in takeing classes, courses and earning degrees in alchemy and astrology and waisting time learning about the black arts, potions, witch's spells and/or voodoo? They're out of date.... there are new more effective and applicable methods to get the job done.

Would you call a person with a PhD in brain surgery "lazy" if he didn't want to learn how to brew bat wings in the blood of a newborn pig under a full moon in order to get rid of headaches?

Thank you for playing, goodbye.

Clint

While I do tend to agree that cw is mostly an older form of
communications and agree with Roland (btw, well said Roland) I would
like to ask the "old timers" as to how many of you have recently,
within the last 3 years, have actually taken someone aside and offered
to try and teach them cw??? I have been slowly trying to learn cw but
have found that locally VERY few people actually willing to try and
teach cw to anyone. It seems odd to me that so many people are so
willing to complain that no one wishes to learn cw when in fact I
belive its the other side of the coin in that so many are unwilling to
teach it to younger people. Thanks for your time, 73, Billy
KE4PJR

Perhaps a better question would be: "How many of you old timers have had people express an interest in ham radio and asked for help in learning CW".

Answer: Several for the first part, zero for the second part.

Hi,
Wrong! Nothing goes out of date. We learn and build from old.
I am still using CW regularly.
I am on other modes as well but not as much interested as CW.
I see still people riding horse drawn buggy and climb mountains on foot.
I still see people writing letters instead of emails using fountain pen.
Still people paint pictures instead of snapping with digital camera.
I dont see anything wrong with that.
Let it be and let everyone do/enjoy whatever s/he likes.
Season's greetings, 73.
Tony, VE6CGX
P.S. How about guys who do not know how to drive manual?
      Are they real drivers? They should give driver test
      using stick shift.

Hi Billy,

Thanks for answering with your very intelligent response. Although I am 60+wpm I was not naturally that speed at birth. Here is the very simple secret to learn CW and is taught to USN Radio operators with amazing 99.9% results. I was already a ham for 5 yrs with I joined the USN in 1959 but I saw guys & gals from tractors on farms to large urban cities learn CW with great ease and fun.

Yes, Billy, I have directly taught scores of boys/girls men/women CW with the following method:

1) CW is rythmn!!!!!! Like music with a metronome!!!! CW was taught in the USN with music playing in the background at a "medium" speed.
2) Every student Radioman had an old fashioned "straight key" connected

to a code oscillator and then learned to SEND CW starting with the
letter A, B, C, etc. They learned the structure of letters by sending
them thus "automatically" learning to RECEIVE CW. Great, huh?
3) So, forget code tapes and code broadcasts until you learn the
structure of the characters again by sending plain text (newspaper,
magazines, etc) to yourself at the rythmn of music or just patting your
foot!!!
   4) If you want some help getting started I can do it by telephone to
start you with the rythmn needed. Simply email me with your telephone
number at address below.

Because when the FCC, in their infinite wisdom, decided not to require a
sending test any longer. Everyone stopped bothering.

That is how I learned CW, back in 61. It worked for me. I now do 50 easy.
And have done so for years.

Roland is right on target. And BTW Roland I have saved your comments. Glad
to meet a real ham.

Dan/W4NTI

Hi,
I am a life time tuba player, hi.
There are many musician CW ops.
Season's greetings.
Tony, VE6CGX

Exactly Clint. You have in fact SUPPORTED his point.

You should stay with the internet and FORGET amateur radio.
```

It's far too "dull and old fashioned" for a trendy "modern"
guy like you!

Stay off the air and we will ALL be happier, including you!

Can you guys talk to him some more HERE please, so
he will be too pre-occupied to get on the radio?

Thanks!

Now Tony - you KNOW that Bill and his little buddy can't STAND any of
that WALKING!

Why would you do THAT when we have cars?

Lets see what the FCC has to say about that, Albert. In the Report & Order following the last round of restructuring, the FCC said;

"We are persuaded that because the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service. We note, moreover, that the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems. Given the changes that have occurred in communications in the last fifty years, we believe that reducing the emphasis on

> telegraphy proficiency as a licensing
> requirement will allow the amateur service
> to, as it has in the past, attract technically
> inclined persons, particularly the youth of
> our country, and encourage them to learn
> and to prepare themselves in the areas
> where the United States needs expertise."

Clearly, Morse code proficiency as a licensing requirement is out of place in Amateur Radio today, Albert. As is your attempts to urge anyone who opposes code proficiency as a licensing requirement to "forget" about Amateur Radio. The radio world is moving forward. Either we move forward with it or we become irrelevant. If we choose the latter path, we will no longer be worthy of the massive frequencies and operating privileges we enjoy - no irrelevant radio service is.

Actually, I like the "code quick" program, myself. I am in no way affiliated with the company that markets it, but it's money well spent. I don't recommend the computer program, as much as the tapes, but the computer program does allow you to paste in ANY text, and have it sent in morse code, (your email, etc) thus giving you fresh stuff to copy all the time. The tape set works with you on a more personal level, and actually uses about 5 different methods, at once, to get the code stuck in your head. It ignores the dits and dahs, and teaches you the characters by the sound of the entire character, likening it to a phrase, which sounds just like the character, when sent.

Here is an interesting, and true story. I took a total of 9 cbers, who were all dead set against the code, but finally decided it wasn't going away any time soon. All of them wanting to get on HF, and with a little prodding by the origional fellow who agreed to let me teach him well enough to pass the test in less than two weeks, guaranteed. They showed up for one hour a night for nine days. The nine day mark just happened to be the first available code test, after commencing our little project. All of them, seeing how easy, and fun it was to learn code, decided to take a whack at it at that code test. All of the nine, except 1, passed with perfect copy, and didn't even have to take the multiple guess test. Of the 9, one was totally blind, and took the test with earphones and a "blind typewriter" (not knowing the correct term for this device). The one fellow who failed, had only been attending the group for about 4 days, but just had the balls to give it a go, anyway. He later passed on his own.

I taught them using the code quick method, lacking all the tapes, and materials. I just did it live, using the guys HF rigs built in keyer, set to no break in.

Just to let you know how easy it is to learn code, ONCE YOU DECIDE TO DO IT... I'de be willing to bet you that I could teach a monkey to copy, in his head, 3 characters, in a days time. The hardest code test to pass will be the 5wpm... why? Because first you must get over all the reasons why you

1)don't have time to

2)are never going to use it

3)shouldn't be required to

4)can't learn it

AND JUST DO IT!

Once you see how easy it is, when motivated, you'll probably start using it because learning a new skill is fun to do. when you use it, your speed will increase without even trying. I really feel sorry for you guys who will never do it. All I can say is, upon passing my 20wpm test, and walking out the door to meet my buddies, with that piece of paper in my hand, well.... I haven't felt that good, no... GREAT, since christmas morning, when I was 3 years old, and got my first bicycle. And yes... I did conform to the rules, and learned to ride with training wheels... I didn't think I should just be able to ride it, without working on it first. And by the way... I'm no brain surgeon, and I went from no-code to extra in 4 months time. Since then, serving on a VE team, I've seen several foriegn exchange students sit down, and go from ZIP, to extra, in a matter of hours... including the old 20 wpm code test.

Anyone want help in the WNY area, I'll help you too. It really is much easier to pass the code test, than to learn all the extra info to pass the expanded written exam. Just respond here, and we'll see what we can come up with.

> Please let me enlighten some of you "youngsters" and some rather lazy ones I might add on what us "oldtimers" consider ham radio really is. Amateur Radio is truly changing .... right. It truly started with a Mission Statement to serve the public in case of emergency. It's become a super CB'er gab medium "legally" allowing more distance and power.

And we still are capable of performing emergency communications regardless of your downplaying a hobby that you participate in like a self-hating ham. Many of us train regularly with ARES/RACES groups and are ready when called.

> 1) Back in the mid 50's we had to travel to an FCC office and pay a few bucks to take a supervised exam both written and International Morse code. Under those non VEC conditions I received 4 full college college credits for my General Class license that to this day appears on my transcript from Univ of the State of NY.

Some universities might still do that. As far as the FCC issue, thank god they did that..... less government intervention in my life is better. Only a liberal democrat would wish it go back to the old scheme of testing.

> 2) Back then ALL us hams read thoroughly the ARRL Amateur Radio Handbook, some of us built our first receiver (usually super-regenerative) others purchased our receiver but definitely we all built our first transmitter from "junk" parts or purchased a kit.

Guess what.... some of us still do today! Generalizing the whole hobby by experiences with a selected group does nothing for the growth of the hobby.

> 3) In keeping with the Amateur Radio Mission Statement us "old timer real ham" ultimate dream was and still is today to possibly someday save

> some lives of public that may be in distress by monitoring one of the
> international distress frequencies almost daily.

And you were living in a delusional world if you think you were/are that self-important but training in message handling and communications is important if that ever does happen. Personally speaking, I also monitor quite a few frequencies as well.

Get with the times man, instead of dwelling on the past.

Uniden Bearcat BC248CLT Scanner 50 Channel Excellent Condition

There's a world of drama out there. And with the BC248CLT scanner, you can stay on top of the news as it happens. Tune into police, fire, weather, emergency, "ham", FRS, Military, Government, and more. 29 - 54MHz, 137 - 174MHz, 406 - 512MHz. The BC248CLT scanner brings together the finest engineering and styling plus all the quality that has made Uniden a legend among scanner enthusiast. The first scanner with integrated Alarm clock.
Features:
50 Channels You can program all of your favorite frequencies.
10 Bands Covers public service, ham, federal and military land mobile.
Review Feature Full frequency LCD display shows frequencies entered into each channel plus weather frequencies. Also includes an emergency weather

alert feature.
Manual Channel Access Go directly to any channel without stepping through other channels
Channel Lockout This feature allows you to skip over channels you currently don't want to hear.
Clock/Alarm Displays time and features any button snooze

$95.00 + $10.00 shipping

I wasn't trying to guilt trip anyone, I was only trying to get others
to look at themselves instead of knee jerking and complaining about
the lack of people who seem to be interested in cw. I myself have not
taught anyone in the last 3 years but I am just a no code ham trying
to learn myself. Thinking about an old saying, if you wanna change
the world, start with the man in the mirror.   Cheers, 73

> Clearly, Morse code proficiency as a licensing requirement is out of place
>in Amateur Radio today,

Iff you read afgain at the top I did not address that issue.

You had been going on about the technical frontiers and what is and is
not "with it" today - FOR YOU (unlike the many thousands of CW ops)

My remarks and your response are almost entirely unrelated.
You have difficulty understanding logic and plain English, aparently.

I merely suggested that if you don't like old fashioned things like HF
and CW that you stay on the internet where you will be happier.

It was about YOU not the FCC.

>Albert. As is your attempts to urge anyone who
>opposes code proficiency as a licensing requirement to "forget" about
>Amateur Radio.

Not anyone - YOU!

You obviously don't LIKE muych about amateur radio and are far more
comfortable grousing about it on Usenet. So fine! Have at it!

>The radio world is moving forward.

No shit!

>Either we move forward
>with it or we become irrelevant.

Again you are using totally faulty logic.
I am involved with digital communications using the latest
techniques.
And that is NOT via an old-fashioned cable or twisted pair
like Usenet has to rely on (grin!)

>If we choose the latter path, we will no
>longer be worthy of the massive frequencies and operating privileges we
>enjoy - no irrelevant radio service is.

Well you are entitled to your opinoin, no matter how confused you try
to get yourself! Enjoy the new frontier. I will enjoy BOTH the
traditional AND the new.

Attacking CW is absurd, and as was pointed out in another
thread, the nastiness always starts with the anti-CW mob.

I don't give that much of a rat's arse about whether the testing
gets stopped, because I don't think it will be the death nell of
amateur radio any more than hundreds of other change sthat have
aoccurred in the past 25 years by the FCC and by hams.

However, I DO think that what bodes ill for amateur radio is
the ATTITUDE and BEHAVIOR of aggressive, divisive people!

My comments were for you personally, and not about the
proposed changes for VEC testing etc.

Again, my suggestion for a guy who dislikes CW and HF is
this, Dwight:
You should probably stay with the internet and FORGET
amateur radio.

It's far too "dull and old fashioned" for a trendy "modern" guy
like you!

Thanks for the honest response Billy, and I truly wish you success in
mastering the code.  You will NEVER regret it, even if they no longer
require it at soime point.

It's one of the most pleasant and ralzxing modes you can
ever use!

Good grief, Albert. You can't even figure out which person you're talking to. I didn't say any of those things and you didn't say any of those things to me. That was a discussion you were having with Clint, not me.

I, on the other hand, addressed your opinion that those more interested in modern electronics and radio than CW (what you called "trendy modern guys") should "stay with the internet and forget amateur radio." And I did so by pointing out what the FCC said about the need to reduce the emphasis on telegraphy proficiency as a licensing requirement to "attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise." Clearly, even according to the FCC, the United States does not need expertise in CW today.

> Again you are using totally faulty
> logic.

I guess it would appear faulty to a person who can't follow along well enough to figure out which person he or she is talking to.

> Well you are entitled to your opinoin,
> no   (snip)

It's not just my opinion, Albert. It's also the FCC's opinion - you know, the federal agency that regulates Amateur Radio.

> Attacking CW is absurd, and as was
> pointed out in another thread, the
> nastiness always starts with the
> anti-CW mob.

I've said nothing nasty to you, Albert. The only nastiness, in the discussion between you and me, is coming from you..

> I don't give that much of a rat's arse about
> whether the testing gets stopped,   (snip)

Since the use of CW itself is not threatened in any way, the only issue at hand is the telegraphy proficiency licensing requirement (the code test).

> However, I DO think that what bodes
> ill for amateur radio is the ATTITUDE
> and BEHAVIOR of aggressive, divisive

> people! (snip)

The only bad attitude, bad behavior, or divisive behavior, here is your own. You're telling people who don't like CW to forget Amateur Radio. You've used more foul language in one message than I've used in these newsgroups in perhaps the last ten years.

> Again, my suggestion for a guy who dislikes
> CW and HF is this, Dwight: You should
> probably stay with the internet and FORGET
> amateur radio.

And my suggestion for someone obsessed with CW enough to urge others with different views to stay away would be to get out of Amateur Radio - attitudes like that don't "comport with the basis and purpose" of this radio service.

The response was addressed to the person who wrote it, Clint.

If that wasn't cl;ear I am sorry, but I think we can all figure out who the writer was even if the attribution got screwed up.

Sorry you are still in shock, OM!

the FCC is not tasked with deciding what we NEED. Rather they are
tasked with regulating what we DO with amateur radio.

Your statement is totally dishonest and is not worthy of discussion.

Twist twist twist....

You would make Chubby Checker proud!!

You are SO adept at twisting what others say.

For the confused, grumbling babies like Dwight, who think that
CW is dead, here is great evidence to the contrary:

TEENAGERS WHO LOVE CW:
http://home.alltel.net/johnshan/cw_ss_teens.html

http://home.alltel.net/johnshan/links_ss_cwin.html

YMMV

Try CW - it might just lower your blood pressure about 90%
there Dwight, old boy!

LOL!

Ahhh, so if you are not a CW fanatic, then you don't like amateur radio. Such a negative attitude as yours has been part of the reason why amateur radio has been in decline. Here in VK, recent meetings between the government communications body (ACA) and amateurs has seen overwhelming numbers in favour fo the removal of CW for the access to the HF amateur frequencies. In the meeting that I attended, only one amateur was in favour of the retention of CW as a mandatory access requirement for HF. Of all of the amateurs at the meeting, only one person in favour of the retention! Surprisingly, even the unrestricted operators (equivalent to extra calls) were all (bar the one anti) in favour of removing CW as an uneccesary barrier to HF access. As a result come 01 Jan 04, CW is not required in VK for access to HF. We still support it as a historical part of amateur radio, and indeed hope that it doesn't die off as a mode that amateurs use. Funnily enough, now it is not required (well in about 4 days anyway), the concensus is that it will probably become a more popular mode of comms - but in the end, that is what it is - merely one of the many modes of comms that is available to amateur operators. Long may it prosper, but not as an uneccesary barrier to HF access.

The bitterness does not start with just the anti CW mob - it is both their fault and those of the anti change establishment. To say that the anti CW individuals should stay on the internet is at best shallow, and at worst stupid - sorry, but I say it as I see it. If it hurst, then there may well be an element of truth in it. Have a think about it.

Never know your bad luck, you may well hear me on HF come 0100 (LIMA) on 01 Jan 2004 (that would be about 311300Z Dec 03 where the ruling in VK

changes all over the country). Hope you welcome all of us newcomers to
HF - many of us have been on HF for years on military and commercial HF
freqs, so are not exactly newcomers to the band in general. Hope to
speak with you then.

Matt

I wrote the words in the message Albert replied to and Albert properly attributed those words to me. However, Albert started out that message by blaming me for the things Clint had said in earlier messages.

No, the FCC is tasked with deciding what the basis and purpose of the

Amateur Radio Service is and what we need, from a regulatory perspective, to be able to meet that basis and purpose. The FCC clearly addressed that when they said "the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service."

> Your statement is totally dishonest and is not
> worthy of discussion.

I've simply quoted, and agreed with, what the FCC has said. If you think that is dishonest, perhaps you should take it up with them. However, I don't think it is dishonest for the FCC to say that "...no communication system has been designed in many years that depends on hand-keyed telegraphy..." And I don't think it is dishonest to say that alone is justification to eliminate Morse code proficiency as a licensing requirement.

Excuse me, but I have never once said, suggested, or even hinted, that "CW is dead." My comments throughout this entire discussion have solely addressed telegraphy proficiency as a licensing requirement.

> Try CW - it might just lower your blood
> pressure about 90% there Dwight, old boy!

And learning to read what a person has actually said, instead of blaming a person for things that person never said, may help lower yours.

I have one and it is a very good rig. You will need a good power supply and also an antenna tuner for the low bands. If you get one don't use the scanning function if you have it set for more than one band as it is hard on the relays that switch the filters in and out for each band.

For the vhf/uhf band you might want to start with a dual band vertical such as a Comet . That should get you into many repeaters. Later on you may want to put up some horizonta beams for each band as most ssb work is horizontal on vhf/uhf.

As with most antennas get them as high as you can. For the low bands you will probaly want to start off with some dipoles. YOu should look around for an ARRL antenna book or the ARRL Handbook. You don't need a new one as there is not much change in the basic information from one year to the next.

This scanner is brand new, unopened and not refurbished.

Full, continuous coverage from 530 kHz ~ 1650MHz.

(No gaps, locked out or restricted frequencies)

Any mode from AM, Narrow FM, Wide FM together with Upper & Lower sideband.
Increment steps vary from 1 kHz up to 100 kHz although when LSB or USB is
selected then increment steps as small as 100 or 50Hz can be used allowing
for true and accurate tuning of utility stations.1000 CHANNEL MEMORY (100 CH
x 10 BANK), 500 CHANNEL PASS MEMORY

Comes with antenna, car connector, NI-CD batteries (4), hand strap, belt
clip, earphone and English manual + Owner's guide and Operating Instructions
by Richard J. Wells

Price is $260 US + shipment

If you have any questions, please do not hesitate to contact me:

Try the Yeasu FT-100 and the ATAS-100 antenna. That will give you coverage from 40 meters to 70 cm and the antenna is for a mobile so it is small. The antenna also has a ground-plane kit for apartment balcony railings. Nothing wrong with the Icom 706 except that they don't have a matching antenna like Yeasu does.

get the 706. It's great.
you'll need different antennas for HF and VHF
build your own 1/4 wave antennas for VHF and UHF for less than five bucks and
attach to the edge of your roof
make a dipole for HF assuming you have general class or higher license.

excellent, excellent radio. i use it mobile and used it when I was a
radio operator at Red Cross HQ in NYC after the trade center was
attacked. we used local repeaters on 2m and 440 for comms (the police
and fire freqs were, understandably overloaded, and red cross traffic
was passed by hams).

i've talked to australia many many times from my car using a hamstick
on 20 meters. the rig is easy to use and program.

the 706 has 2 antenna outputs; 1 for vhf/uhf and another for 6m-hf. so
you need a combo 2m/440 antenna and another antenna for HF. the
vhf/uhf can be a mag mount. the HF will need to be anchored to the car
and grounded

Happy new year everyone-
my apologies for the cross-posting, please reply via email if you can help...
I am looking for advice and/or benevolent acts to aid a performance of Cage's Radio Music in Los Angeles on January 17. Our efforts at interpreting the score place the frequency range between 1900khz-5400khz (the tuning numbers in the score range from 55 to 156 -- we assume these are wavelengths, as the score is from 1956 -- please advise if we are wrong) and we need up to 8 radios for the performance. Thanks to any who can help.
We will be performing this at ASTO Gallery in Los Angeles on January 17 at 8 p.m. Other pieces on the program are Steve Reich's Pendulum Music and an improvisation with cello and laptop. On January 30, we will perform Cage's Solo for Cello and a cello/laptop improvisation. ASTO is in the Artist's District between Cafe Metropol and R23. More information can be found on their web site, www.artst.org <http://www.artst.org> .

OK, you are wrong :^)

Most likely, the tuning numbers in the score refer to the regular AM
broadcast band, i.e. 550 to 1560 in 1956-era kilocycles. Perhaps Cage's
radio lacked that last zero :^)

Actually, such crackpot "performance art" is one of the dumbest ideas I've
ever heard. A waste of good radios.

Are you ready to finally get that HAM Radio license that you always wanted?
Maybe you need to upgrade that license?

Take a FREE Online HAM Radio practice exam and see if your ready.  You can
take the exam as often as you like and best of all, IT'S FREE.

www.qsl.net/n4rpd N4RPD's HAM Radio Website has a practice exam for all the
current license classes.  A new exam is generated every time you visit too.

Good luck and 73,
Rob N4RPD

Hi!

There is a new realtime psk31 monitor available at
http://www.hamradio-portal.com/psk !

Watch propagation or your own signal on 20m at 14.070 Mhz !

Please use on the JAVA Applet below the RED color checkbox to get a zoom to

14.070 and don�t mind about the right scale ! If you use the red checkbox
you�re defently

on 14.070 Mhz.

This monitoring is available 24h every day...ocator is JO31SQ / Germany

Have fun !

Andre

I am looking for the operating manual for an old radio, a KDK FM-2033.

On the other hand, I would appreciate it if someone could tell me how to operate it if he/she knows how and can relate to me by e-mail.

Thanks.

I had one of those. Piece of junk, especially where noise rejection
matters. Get something newer.

----------------------------------------------------------------

Would you like some advice?  Ask him.  Hams are *very* particular about
their radios.  Save the element of surprise for something less important.

Hello All!

I have a problem I'm hoping someone can help me with.

I have a Kenwood TS-140S that seems to have a transmit problem. I think its the Microphone but I'm not sure. My funds are VERY limited at the moment so I don't want to buy a mike unless I'm sure thats the problem. I try to transmit and see no output on the meter. When I tap on the mike I see the meter deflect, or if i tap the mike the meter deflects with the taps. I checked all the connections and they are fine (Inside the mike also). If I whistle I also see the meter deflect for a second. The radio was fine and then this started the other day. I tried the mod for intemittent TX power that i found during a search but that didnt help (and the problem isnt intermittent).

Can someone steer a financially strapped Ham with some suggestions.

Thanks in Advance!

I'm not sure I understand your symptoms/observations correctly, however, are you sure it's not working correctly? What you describe regarding whistling or tapping the mic causing meter deflection sounds fairly normal for SSB operation - i.e., no output until audio is provided from the mic.

regards,

mark

ab1x

I agree with Mark, but want to take it one step further. If the problem is NOT in the SSB mode, try CW mode with the key down momentarily. Don't forget to increase the RF gain (more power) to see if the rig will give you a solid output level.

Steve KA4TMB

Sorry about the desription of symptoms....
If I try to speak there is no meter deflection , only if i tap on the microphone or whistle will the meter deflect....NOTHING if I speak ! and there seems to be no transmit unless i tap on the microphone and then it only deflects for the duration of the tap. I have looked in the mike and all connections seem OK.

Any ideas?

Have you only tried SSB - or have you also tried AM/CW or FM? If the radio still doesn't transmit with any of these, then it may well be more than a bad mic. If there is a carrier, try monitoring your signal and see if there is any audio - if none, then you have a pretty good idea that the problem is on the audio line, and from your description, it could well be in the microphone - having said that, there could well be other probems internal to the radio.

Matt

-- I vaguely seem to remember seeing a Tranciever comparison chart in one of the magazines. Can someone tell me which mag/issue? Or is there a web chart somewher? It's time to look for a new toy for the shack. The ancient and venerable TS440 works great but for how long is another matters. (2nd hand to me in 1990).

Thanks

John

Hello--

I have an Alinco DR-570 2m/70cm radio that,
when transmitting on high power, the display
will dim to arond 50% brightness, and the power
output meter will quickly go full scale, then drop

to zero, then go full scale--repeatedly.

I believe that the radio is trying to protect itself
from damage.

On low power, all seems well, except that the
display dims more than I seem to remember it
dimming during transmit.

Does anyone have knowledge of a good place to
send it for analysis and/or repair? It is approx 10
years old, so I have to consider the cost of a new
radio over the cost of repairing this one.

Thanks for any helpful input!

You don't have enough current going to the radio. Too small of wire or plugged into the cigarette lighter jack...

```

Clif--

You are 100% correct.

I took your advice, and looked more closely at the cabling,
and sure enough, I used a power pigtail that appeared to be
the same guage as my other red/black power cables, except
it wasn't...the insulation was just thicker.

Thanks for the heads-up.

This should be enough motivation for me to solder on all of
the Anderson PowerPole connectors I received, and do it
to the kit's heavy guage wire.

Thanks, and 73.

```

How are you powering your radio? If from an AC power supply, you may
have a failing power supply. Your display's brightness shouldn't
change at all regardless of your transmit power setting.

73, Sam

I realize you found the problem, but the answer to your question is:

http://www.therfshop.com/

I also have a DR-570, and Randy fixed my dead display.

Randy does FAST quality work. He had my radio back before
I even missed it.

Hi all

Was wondering if there is anyone out there who can help? I have just purchased a 7 element ATN 18-30-7 log periodic that covers 18-30Mhz. I believe there is another ATN aerial with the same boom length of 6 metres that covers 14-30Mhz. I was hoping someone with one of these beasts could advise the element lengths etc so i can convert mine to cover 20metres. I assume i will need to rearrange the elements, drill alternate mounting holes and change some element lengths and make some crossover straps for phasing harnesses but thats just a formality. My aerial comes with a diagram of the element lengths etc so was hoping someone could scan and send. I could start from scratch and try and design a unit but this would save me a heap of time. It appears that ATN is long gone. Any help would be greatly appreciated. I have quite a collection of amateur radio related service manuals in pdf and or jpg format so maybe i can return the favour.

email for reference is tstone12002@yahoo.com.au

Thanks in advance.
Cheers
Tony

According to their add in AR, ATN are still around, and still in business.
Email address is atnant at iinet.net.au - as sourced from page 54 of this
edition of AR.

Hi

I know that this is out of the Ham area but as I am one, and I am looking for information on Honda Navigation systems. I have Honda Odyssey with a Navigation system and it's all in Japanese. (Import Car)

I am looking for any old CD's to see if I can reverse engineer the thing to make maps for New Zealand or find any info on how to make a cd to load the maps ? Any ifo much appreciated. thanks !

This topic would get far more productive answers on the group sci.geo.satellite-nav.

There have been some recent threads related to New Zealand mapping.

In general, though, these systems are not set up to allow you to load your own maps.

Happy trails,
Gary (net.yogi.bear)

Hi Bill,

The SEA and Midland LMR 220Mhz repeaters & radios are now appearing on the surplus market, pulled from the (now bankrupt) narrow band trunking systems.

Securecor and Intek were large 220 smr operators in the late 90's. They had systems out here on on the US West Coast from Texas to Alaska.

They are hybrid ACSB units, the LMR and SEA formats do not work with the other.

SEA is still on line selling repeaters, however they probably wont do a lot to help you convert the equipment to Amateur Operation.

Two Surplus Dealers are selling used ACSB radios and some repeaters, look for them using the Ebay IDs of erac and rhoadeseller (might be rhodeseller).

I bought much/most of the 220 antenna combiner equipment as it is very high quality (Sinclair, Decibel, Wacom & Telewave) gear, of which I'm slowly parting out to get some of my money back. Watch for my auctions on

Ebay if you have interest in this sort of stuff.

You might be able to make some of the radios talk to each other on simplex
(direct), then figure a way to move them up onto the amateur band after
you get the programming right, but it's not a beginers task.

There are a few 220 smr system operators still in operation around the
country, you might do a reverse lookup on the fcc web page and contact
those people you can find for information.

cheers
skipp

I'm trying to find a way to measure the capacity of single -- mainly AA -- batteries. Some of my battery packs don't last as long as they should because of mismatches in cell capacity.

I've got a good assortment of electronic equipment, variable power supplies, high power resistors, etc. I've even got a Maha MH-C777PLUS charger/discharger. But this doesn't let you do single cells.

I can come up with some -- not so great -- ways to measure capacity, like discharging thru a resistor while monitoring voltage. This would allow me to at least match batteries somewhat but not really measure true capacity. For true capacity I need a constant current device, and that's where I'm stumped.

This could be electronic, if it's inexpensive and I can get the parts at Radio Shack. But I'm thinking more along the lines of a mechanical device to drain the battery in a constant current fashion. An electric motor would just slow down, so that wouln't work. What type of mechanical device pulls a constant current regardless of input voltage?

Does anyone have any suggestions on how to do this?

Thanks for your help.

You can use a 3 terminal voltage regulator and a resistor or two. They can be wired for a constant current generator instead of constant voltage.

Put an AMP meter across the battery. A "AA" should be good for about 1.2 amps or so. Make sure the multi meter is in the 10 amp position before you do this!

Good luck, John w5cgu

That was going to be my suggestion, for a split second.  Then I
realised the Vin-Vout differential wouldn't let this work on a single
AA.

You don't need a constant current sink to determine "true" capacity. If your load resistor is suitable rated and reasonably low tempco, then monitoring the voltage tells you the current to a fair degree of accuracy, so you can even work out how many coulombs are extracted before a chosen end voltage is reached.

Besides, how many loads in your assorted appliances are constant current?

We do discharge testing (as part of evaluating Li-Ion charging systems) using precision logging equipment monitoring voltage while discharging into resistive loads of known characteristics. The only limit is the accuracy you require, and in your application a couple of percent is probably the spec.

I could monitor and log the voltage across a fixed resistance, draw a curve, calculate the area... This would be a real pain in the rear for the number of batteries I want to test. So I'd really like to find a simple constant current device.

This Radio Shack digital multimeter does voltage logging on a PC:
http://www.radioshack.com/product.asp?
catalog%5Fname=CTLG&category%5Fname=CTLG%5F011%5F008%5F002%5F000&product%5Fid=22%2
D812
The details on the software are vague. Does anyone have one of these?

Here's a cool device that would do the job, and then some. But I'd like to keep it just a bit simpler:
http://www.yoredale.uklinux.net/electronics/capacity1cell.htm

Please see previous thread.

I'm trying to match AA battery capacities so they can be used together in battery packs and I think created a low-tech way to do this. I'd like to hear more informed opinions.

This would apply to NiCads and NiMh but it should work with lithium-ions too.

Take all your batteries of the same type and charge them all in parallel to the same voltage. Then one at a time remove them from the float voltage and attach them to a fixed size resistor (say 6 ohms) for a fixed period of time (say 3 hours) then measure their voltage. Well matched batteries should have similar voltages.

Does this wash?

The only thing I wonder about is the full charge state voltage. Say I'm doing Ni-Cads which usually top-out around 1.65 volts (where they experience a voltage drop), and I set the float voltage for the bunch at 1.5 volts. Would the maximum voltage of each cell make a difference here?

Thanks for your help.

One possibility is an LM317 voltage regulator, wired up with one resistor between Vout and Vadj to create a current source (see the data sheet).

Another possibility is a JFET, with source and gate shorted together.

Problem with both of these approaches is, they probably need several volts of "headroom" before they begin acting as "stiff" constant-current sources. If you're hoping to run an individual 1.2-volt cell down to, say, 1.0 volts to measure its useful capacity, neither of these will work.

One thing you could do is simply discharge through a fixed resistor, measure the voltage periodically, and use Ohm's Law to calculate the current being discharged at each measurement time.

```

What's really important for matching in a battery pack is that the cells have very close to the same capacity. If one has lower capacity than the others, the others will reverse charge it after it discharges. This further reduces its capacity, making it go flat even sooner the next time. The absolute cell voltage at any point in the discharge process is unimportant.

Unfortunately, you can't discern the remaining capacity of a NiCd or NiMH cell by looking at the cell voltage. The only way to accomplish the matching is to discharge each cell until its energy is essentially completely gone (i.e., to 1.0 volt at moderate drains), and select cells on the basis of how long they take to get there. Ideally, the discharge rate would be about the same as in the device you intend to use the battery for. But in practice, the capacity of NiCd and NiMH cells isn't a very strong function of the load current, so you've got quite a bit of leeway.

Many years ago I made up a discharger for this purpose. It's basically an adjustable constant current load with an adjustable voltage comparator. When the voltage reaches the comparison voltage, it disconnects the load. An old analog electric clock is used to record the time -- the comparator also removes power from the clock. Initially set at 12:00, it directly reads the time it took for the cell to discharge to the specified voltage level. These days it would make a lot more sense to use an A/D converter computer board and/or a microcomputer chip of some sort.

How about using a storage scope to plot the discharge curves and a computer program to work out the areas under the curves?

Many years ago someone associated with NASA figured out that the life expectancy of nicads (series or parallel use) could be increased significantly by matching the internal impedances. The recharge/charge life did not just double, but went up by a factor of ten (approx).
I think this was published in the some NASA Tech journal. It used to

be published about 10 times a year, it might still be.

As I alluded to in my previous, I suspect you will find simple
constant current and 1v5 are relatively mutually exclusive unless you
want to go to low voltage op amps and roll your own.

I don't know what you are using to post your n/g messages, but I use a
PC. They DO have other capabilities besides internet connectivity.
It takes but a few lines of code - even in humble QBasic - to log the
voltages at set intervals, calculate current, and do time integration
to obtain joule or coulomb figures. Having a constant current device
as your load won't make this task any easier in reality.

>This Radio Shack digital multimeter does voltage logging on a PC:

>The details on the software are vague. Does anyone have one of these?

The average "affordable" RS-232 equipped multimeter seems to invariably have a poor overall accuracy spec. This won't affect repeatability or the validity of comparisons, but does obviously impact on absolute numbers you obtain.

Seems the RC car community matches batteries based on a number of
criteria like capacity, internal resistance, and average voltage. The
websites I found on this don't give specifics.

Buying a $200 pieces of test equipment to measure all this is slight
overkill. I think I came up with a way. What to you think of this?

Charge all the batteries in parallel to the same voltage, say 1.5
volts. Then partially discharge them all in series. At this point
quickly measure the voltage of each cell while still under load.
Matched cells would have the same voltage.

Why charge them in parallel? Having them all charge the same in the real world should be part of the matching. In fact, if you start out with all batteries in the same state, and charge them in series, you can quickly pick out oddball by measuring the charging voltage across each cell.

Well, if you don't mind spending some money --

http://www2.towerhobbies.com/cgi-bin/wti0001p?&I=LXCJG7&P=7

This is a great charger. Not only does it do a great job with my R/C plane batteries, but it does my ham batteries too. It can charge or discharge 1-24 cells, and can do NiCd, NiMH, Li-Ion, Li-Poly or lead acid bateries.

For one battery, you just charge the battery, then set it to discharge at perhaps 1/4 C, and tell it to cut off at 0.9 volts. Once done, you'll know exactly what capacity it has.

As another poster mentioned, the R/C communities know all about batteries. Read their stuff on it, you'll learn a lot. :)

Oh, if you do use a charger like this to charge a battery, be sure to make sure you've got a direct path to the battery itself -- trying to push 1 A through a charge circuit that lights up a LED and such is a great way to let out the magic smoke -- even through the battery can handle it no problem.

If this is too much for you, there are other alternatives, but few are so flexible for this `little' money.

It's not difficult. I use an supply to power an op amp which senses the current across a small resistor and drives a power FET. It does fine down to less than one volt. In fact, it was actually designed to use as a constant current source for charging a NiCd battery from a solar panel, and it does double duty as a constant current load for testing battery and cell capacity.

But be aware that the way they're using batteries is very different from the way you're likely to. So some of the characteristics important to them might not be important to you, and vice versa.

Bruce,

Here is a crude way to do unattended tests. There are any number of cheap battery powered clocks that run off 1 or 2 AA cells; you would use external power instead. Put one of these in parallel with your load, and see how long the clock runs. You could add an opamp to set the trip point to a particular voltage. Use an opamp whose common mode range includes the negative rail.

>
> I've got a good assortment of electronic equipment, variable power supplies, high power resistors, etc. I've even got a Maha MH-C777PLUS charger/discharger. But this doesn't let you do single cells.
>
> I can come up with some -- not so great -- ways to measure capacity, like discharging thru a resistor while monitoring voltage. This would allow me to at least match batteries somewhat but not really measure true capacity. For true capacity I need a constant current device, and that's where I'm stumped.
>
> This could be electronic, if it's inexpensive and I can get the parts at Radio Shack. But I'm thinking more along the lines of a mechanical device to drain the battery in a constant current fashion. An electric motor would just slow down, so that wouln't work. What type of mechanical device pulls a constant current regardless of input voltage?

That's a great idea.

It wouldn't really be important to trip at a particular voltage if you're interested in finding out the capacity, provided that the clock will run at one volt (which any device designed to run from an alkaline cell certainly should)(*). There's very little energy left when a NiCd or NiMH cell reaches one volt, and the cell voltage will drop from there to the point where the clock shuts off in a very short time compared to the total discharge time.

Roy Lewallen, W7EL

(*)Unlike NiCd and NiMH cells, an alkaline cell still has a subtantial amount of energy left when the cell voltage is one volt, assuming a low or moderate load. Well designed devices running from alkaline cells should operate down to about 0.9 volt per cell at low or moderate drain, or about 0.8 volt at heavy drain, in order to extract nearly all the cell's energy. Ideally, a NiCd or NiMH powered device should disconnect from the battery at one volt/cell to prevent reverse charging of a weak cell. Even that isn't sure-fire if there are more than about 5 cells in series, and if one is considerbly weaker than the others.

I'd add a prior step: Fully discharge the batteries.

Rob

There is someting broken at the CorvetteForum.com and the above URL no
longer works. Just send me an e-mail if you are interested.

Hi all I am after some parts for the Icom M-800 HF Marine Radio

I need a remote controller unit with all the leads and I need another set of connector leads and a mic Oh and the proper DC Leads :0)

does any one out there have any of these parts or any contacts for these parts ????

I have two Radio bodies and one controller but no connector leads or mics ..

The controller part number is EX-803 Remote Controller
DC Power cable for Controller 12v-1 amp OPC-089A
Interface Cable for Controller OPC-172A

Main Unit Power Cable 12v-30 amps OPC-077

Also is there a mod available to get general coverage TX ???

Please feel free to reply to my email.

maleaton@bigpond.net.au

My Kindest Regards to the Group.

73 De VK3UME

First of all, forgive my cross posting. I was not sure where would be best.

I am a new ham. I have been looking around for some mobile 2m radios to put in my car. Some of them I see are capable of 50w 65w or 75w transmit power. Would I need to do any kind of MPE calculations for radios that transmit above 50watts for mobile radios? Considering that an antenna mounted on the top of the car and that exposure would be only momentary to anyone I drive by.

Technically yes. There is a site that will do this for you. I have
lost the link, however a search should find it.

I should show that you are within limits. (A 5 watt HT held next to
your head is worse then a 50 watt transmitter 8 feet away.)

Dan

Battery matching.

Here is how I would go about it. Charge the cells individually untill their voltage starts to drop, aka. peak charge them. Measure the peak voltage. Then hook them to a fixed load and measure their discharge time to 0.9V. Let the cell rest. The next day repeat. Take the measurements and compare close discharge times and close peak voltages. If you could measure internal resistance it would be nice, but I don't know of a simple way. In my opinion the important qualities are.
1. Close discharge times
2. Close and low internal resistances
3. Close peak voltages

With out doing the math, I'd bet the HT has a stronger signal level
against the side of your head than a KW at 10 feet.

Any one care to do the math?

The internal resistance of the battery changes as the battery is discharged.
Also things like temperature, age and other factors effect it.
I think the proper way to test your battery is to fully charge it to the manufacturer specification and discharge it at a given amp hour rate.
Compare your discharge curve with the manufacturer. Choose the same discharge rate that the manufacturer does btw. If your curve is a little less than what the manufacturer says then your probably ok. If it is much less then you need a new battery.

Canada just happens to be a world leader in this field. The body of knowledge is summed up quite nicely in Health Canada's 'Safety Code 6'.

www.hc-sc.gc.ca/hecs-sesc/ccrpb/publication/99ehd237/toc.htm

More links:
www.google.com/search?q=health+canada+safety+code+6

In general, if your 2m antenna was mounted on the trunk lid and someone was sitting in the back seat and you transmitted 50 or 75 watts for the full six minute averaging interval, you might be in a situation where you'd be in excess of the guidelines. In other words, your passenger's head might get slightly hotter than recommended. With a top mounted (VHF) antenna, there is not likely to be any problem - but who knows without checking... You're in the nearfield and that complicates things...

The whole RF Safety field is still somewhat immature (IMHO).

Hi Folks:

A buddy of mine in the RF field of the military use to stand in front of microwave satellite transmitting dishes to keep warm on the really cold days. He said you, "..feel warm all over!". Sounds nuts! Today he's well over 80 and still cuts his own grass.. Must be OK..

Harry

The problem is, no one really knows what is safe and what is not...Unless it is doing obvious damage.

With a 2-meter mobile I'd not worry a bit running 160 to 320 watts to the antenna. Standing beside the car should be no worse than using an HT with the antenna against the side of your head.

Blank1. Kenwood transceiver TS-430s, with am, fm, cw, ssb and cw crystal. With this transceiver comes a PS-430 power supply, Mc-60 mike, a hand mike, a AT-250 automatic antenna tuner, and all their manuals. The price is $475.00 US plus shipping costs.

2 One Kenwood 9R-59D communications receiver and its' manual. The cost of this rare receiver is $100.00 US plus shipping costs.

3 One Kenwood KPS-12 power supply. $50.00 US plus shipping costs.

4. One Yaesu FRG-7700 communications receiver with its' manual, a Yaesu FRT-7700 antenna tuner, a Bencher audio filter and a Palomar lf converter. The price is $250.00 US plus shipping costs.

5. One Radio Shack DX 440 portable communications receiver. $50.00 plus shipping costs.

6 One ICOM IC-505 6 meter all mode transceiver. $125.00 US plus shipping costs.

7.One Amrco 1.6-54 mcs pre-amp. $30.00 US plus shipping costs.

8. One Astatic chromed and amplified mike. $50.00 us plus shipping costs.

9. One Eico resistance-captaincy bridge. $30.00 US plus shipping.

All this equipment looks good and it works well.

If you are interested please email me at
peter.christensen@shaw.ca
Thank you. Peter Christensen.

I believe you need to change a reference crystal as well as fiddle with
the jumpers.....

1stly sorry Nick!!!...it is an xtal change as well!.
my jpg file was rather small!

go here for the service manual ftp://80.164.5.88/yaesu-service/
then see image47 in the ft23r service manual file.

i have had one for almost 20yrs now, magic 'bullet proof' radio.

though i warn u...the mod needs the VCO unit removing!!
NOT easy.

mike
P.S sri agn to Nick.

> then see image47 in the ft23r service manual file.
> i have had one for almost 20yrs now, magic 'bullet proof' radio.
> though i warn u...the mod needs the VCO unit removing!!
> NOT easy.

Thanks for the information.
I looked at the .jpg file, it wasnt all that clear (resolution).
The crystal needs to be replaced from 12.8MHz to 10.24MHz? (guess - can you verify?).
-> Guess based on following idea that the crystal will be pulled by the trimmer capacitor hanging
-> at the end of it and squinting at the side comments on the service manual:
-> 12.8MHz in ratio to 12.5MHz
-> 10.24MHz in ratio to 10MHz

Looks like I have to remove a lot to get to the main board (i.e. free it from the case)
and then unsolder the PLL board (which is a right angles to it) before I can unsolder/solder the bridges and perform the crystal replacement.

The ensure that the frequency is correct - by altering the trimmer and using a frequency counter.

It does look a bit difficult.

Regards,
GW7ABW

I am curious to see what the outcome is. I have had a couple of the PMR versions of those sets (basically the same as the FT23) and you can make the display read in 5/10khz or 12.5/25khz steps by changing a jumper (not sure which now) but to actually change its RF operation from one to the other a reference crystal change was required.........

Regards

Neil

We would like to invite you to discover our recent updates on
http://etols.halfin.com (electron tubes online shopping)

- new presentation of the homepage
- a more friendly search engine
- quick links to most wanted tubes
- new products such as tube sockets, boxes, top caps

Special offer on :

ECC81/12AT7	RFT	11.05 US$
6SL7GT	RUSSIAN	3.05 US$
6V6GT	RUSSIAN	3.15 US$
6L6GC	SVETLANA	13.90 US$
KT88	SVETLANA	40.00 US$

Matching 1.75 US$ per tube

But also : EM4 - F2A - GZ37 - 5300B - 6C33/CB - EF86 - F2A11 - VT4B -
RS1003 - EL34 - 12AX7 - EL84 - ECC83 - 12AU7 - 6L6 - 6SN7 .

Major brand : MULLARD - SIEMENS - TELEFUNKEN - WESTINGHOUSE - DARIO - VALVE
ART - VALVO ..

Man gets "spam rage" over penis ad
By Adam Tanner

SAN FRANCISCO (Reuters) - Call it spam rage: A Silicon Valley computer programmer has been arrested for threatening to torture and kill employees of the company he blames for bombarding his computer with Web ads promising to enlarge his penis.

In one of the first prosecutions of its kind in the state that made "road rage" famous, Charles Booher, 44, was arrested on Thursday and released on bail for making repeated threats to staff of a Canadian company between May and July.

Booher threatened to send a "package full of Anthrax spores" to the company, to "disable" an employee with a bullet and torture him with a power drill and ice pick; and to hunt down and castrate the employees unless they removed him from their e-mail list, prosecutors said.

He used return e-mail addresses including Satan@hell.org.

In a telephone interview with Reuters on Friday, Booher acknowledged that he had behaved badly but said his computer had been rendered almost unusable for about two months by a barrage of pop-up advertising and e-mail.

"Here's what happened: I go to their Web site and start complaining to them, would you please, please, please stop bothering me," he said. "It just sort of escalated ... and I sort of lost my cool at that point."

The Sunnyvale, California man now faces up to five years in prison and a $250,000 fine, with a preliminary hearing scheduled for next month on charges of threatening to injure someone. He said he did not own any guns or have access to anthrax.

Booher said the problem stemmed from a program he mistakenly downloaded from the Internet that brought a continuous stream of advertising to his computer.

The object of the Californian's anger was Douglas Mackay, president of DM Contact Management, which works for Albion Medical, a firm advertising the "Only Reliable, Medically Approved Penis Enhancement."

"This went for a long, long time. He seemed really dedicated to this," Mackay said from Victoria, British Columbia in Canada. "He seemed like a guy just crazy enough with nothing to lose that might actually do something."

He said his firm does not send spam but blamed a rival firm which he said routes much of their unsolicited bulk e-mail through Russia and eastern Europe. Mackay said such firms gave a bad name to the penis enhancement business.

In other cases, Internet vigilantes have bombarded spammers with both unsolicited e-mail and regular mail and phone calls, launched attacks on spammers' computers and posted spammers' personal information on the

Internet, according to reports.

Separately, lawmakers in Washington said the U.S. House of Representatives was poised to vote for on a measure to outlaw most Internet spam. Lawmakers hope to pass a national anti-spam bill before a much tougher California state law goes into effect on January 1.

The RadioCom program does not control the scanner or any other receiver. It appears to simply process the audio output.

Does the DTMF generator in the microphone still work? I love the IC-27 series, but the DTMF generator has gone out on all of my mics.

I see the DJV5 is listed at 199quid
for 50quid more you could get the Kenwood TH-F7
http://www.wsplc.com/

I have for sale an ICOM IC 207-H. I will include the manual, power cable, and original box. The programming software and cable will also be included. I have two of the thumbscrews to attach the radio to the mount, and the other two are just regular screws. I do not have the other hardware to mount it (just the bracket) or the mike clip. I would like to get $300.00 for the outfit. I will ship UPS from 37871 at no charge to the buyer when I receive payment. I accept PayPal payments or money orders. Pictures upon request.
Thanks.

I guess you would like to get that kinda money for a used radio ...

http://www.yv5.com/icom.html has 'em brand new for the same price.

Andrew ZS1AN will be operating from Dassen Island Lighthouse during International Lighthouse and Lightship Weekend using the callsign ZS1AN/P. Dassen Island is the smaller and less accessible of the two islands in IOTA AF-064, the Western Cape Province South West group.

Andrew plans to operate from approximately 1600 UTC on Friday 16th August until 1200 UTC on Sunday 18th August. Mode will be primarily CW, operating on or around the following frequencies: 7026, 14026, 21026 and 28026 KHz. He will be designing a special QSL card with the relevant IOTA information for the occasion. Please QSL direct to PO Box 350, Newlands 7725, South Africa. If you would like a direct response then please include a green stamp or IRC. All other replies will be sent via the bureau.

Please note that the operation is weather dependant as the island can only be reached by small boat. Additional information can be found at www.qsl.net/zs1an/dassen.html.

RF Parts in California is also a useful supplier for various parts, once you
determine what has failed.
http://www.rfparts.com

IF you have a bad transformer, send it to Peter Dahl. Don't fool with
anyone else. Peter reworks/rebuilds for the government, military and
commercial broadcasting industry.
The fact that he performs the work for amateur and short-wave hobbyists is
RARE.

IF you think it is too much $$ for you, pack it together and sell it on QTH
or eBay as a "parts" unit - stating what has failed or known wrong. Take
the money and buy a working one - they are showing up in volumes -- due to
the rising cost of the "sweep" tubes (6KD6) that they run on (no longer
made, but a few Eastern European and Chinese substitutes available)

Gentleman,

It doesn't matter who you buy from, just make sure it's an AMERICAN dealership, not some YV5 bootlegger from Miami. They're prices are just AWFUL compared to other places like HRO, AES, and simular. Reason? South American goof balls pay anything for radios so they can run their illegal drug traffic. I'm sure YV5 whateverhisnameiss sells the radio at list price, plus ten percent, AND includes a Ham license inside each box. Typical.

The FL 2500 is virtually the same as the FL 2000. The 2500 had 160 meters where the others only cover 80 to 10.The FL 2100 used 572B's as i recall. The transformer from the FL2100 will probably work and the Peter Dahl is a good choice. Dahl will build one to specs if they don't have one off the shelf.

I hope its just the diodes not the transformer. I think I saw the 2500 listed and I recall it said it was working....guess not.

Hate to say it but if the transformer is gone and unless you just want to spend a bunch on the amp as a collector you might as well sell it for parts or just junk it. It is doubtful if the transformer out of a FL 2100 will

work as it uses 572 tubes that operate at a much higher voltage (probably
about 3 times as much) .

At one time the 6KD6 tubes were inexpensive compaired to other tubes but now
they are very high in cost.

Now just how is the FL 2100 transformer going to work in the FL 2500 as the
voltage for the 572 tubes are around 3 to 4 times the voltage of the 6KD6 ?

What about wiring the primary for 240 and use a full wave bridge on the sec.
(be about 800 volts)
Problem is you could only run it on 120 VAC and have to rig up a heater
supply

As previously announced I plan to be operational from Dassen Island Lighthouse (IOTA AF-064, ARLHS SAF-042, WLA LH-0423) from 1600 UTC on Friday 16 August until 1200 UTC on Sunday 18 August for International Lighthouse and Lightship Weekend 2002. This message is the final announcement and includes the latest weather and operating information.

WORLD LIGHTHOUSE AWARD

The World Lighthouse Award has issued the number LH-0423 for Dassen Island lighthouse. This will be its first activation for the WLA. My thanks to Don W9DC for facilitating this. My QSL card will include the WLA number as well as ARLHS and IOTA information.

WEATHER

I have discussed the latest weather forecast with the skipper of the boat which will be taking me to the island. Although it is somewhat windier than hoped it is still likely that we will be able to make the trip on Friday afternoon and be operational by 1600 UTC on 16 August as planned. If the weather does not play ball on Friday then I will go on Saturday morning instead, in which case I should be operational by 0800 UTC on 17 August. I plan to operate until 1200 UTC on Sunday 18 August; however it is possible that the weather will keep me on the island longer than expected in which case I will remain operational until I am able to leave the island.

OPERATING SCHEDULE

I have updated my operating schedule to take into account the latest solar flux index forecasts for the weekend, which are substantially better than the forecasts I used previously. My planned schedule is as follows (all times UTC):

0500-0600	7026 CW
0600-0800	14026 CW
0800-0900	No operation
0900-1000	14026 CW
1000-1100	14226 USB (primarily for ZS lighthouses)
1100-1200	No operation
1200-1500	21026 CW
1500-1600	14026 CW
1600-1900	21026 CW
1900-2100	14026 CW
2100-2200	7026 CW

This schedule will be repeated on all days for which I am operational. Please see it as a guide only as my operating times and frequencies will take into account actual propagation conditions and I will take breaks to walk on the island etc.

Further information, including propagation forecasts, can be found at http://www.qsl.net/zs1an/dassen.html

QSL INFORMATION

Please QSL direct to

PO Box 350
Newlands 7725
South Africa

Please include a green stamp or IRC if you would like a direct reply; all others will be sent via the bureau.

If you are a FISTS member and your QSL card (with your FISTS membership number) reaches me before the end of September then I will QSL via the FISTS bureau at no charge. I intend to send a single parcel of cards to the FISTS bureau in early October. My FISTS number is 8921.

Hello, friends -

Here is a story that may give you something to think about if you are considering a radio purchase.

Some years ago I bought a Yaesu FT-5100 dual band (2m/70cm) transceiver. It has worked quite well for me. However, over the past two years I have noticed that the liquid crystal display has begun to show a crescent shaped black mark in the upper center. So far this has not caused any problems, but I can foresee that it will grow and eventually the display will be unreadable.

I spoke to my favorite dealer and he told me that he could get it repaired with a shorter turn around time than if it went directly to Yaesu. OK, I said let's give it a try. Unfortunately, his technician promptly sent it to Yaesu.

After nearly six weeks, Yaesu told the dealer that there was more wrong than just the display. It had also lost power - that is it was putting out about 20-25 watts instead of the expected 50. Cost of total repair would run in the neighborhood of $450.

My response was "just fix what I asked for, no more"

Yaesu's reply was to the effect that it was an "all or nothing deal". They would not just replace the display.

At that point I said don't bother, just send it back. Consider that I can at this time buy any of the following from AES:

Yaesu FT-7100M $300
Kenwood TM-G707A $300
Icom IC-207H $300

Why in the world would I spring for half again as much to repair the 5100 when all three of these mentioned have more bells and whistles?

If someone from Yaesu wishes to defend their all or nothing policy, I will be happy to listen. Until then it will be a cold day in Hades before I purchase another Yaesu product. In the meantime, buyer beware.

Chuck

I'm in need of a set of schematics for the Icom IC-2000H VHF mobile
tranceiver.  I'm off the air untill i can get it fixed.  If anyone has a
copy that they can e-mail me i'd be most greatful.  Thanks in advance.

Sounds like you do not own an automobile of this age.
Good luck, you are going to really surprised.

Maybe you should just lease the radio,
most people seem to lease their cars these days, so they always have a new one.

Check the filter caps. Also, if the xformer is ok, and
if the amp does not have a step start circuit, add one.
Consider replacing all the diodes if you are going to
get this running again.
Some HV xformers, like those in many microwave ovens,
intentionally ground 1 secondary terminal. Don't know if
that applies to yours or not.

Hi there!

Our new Magnetic Loop Website are now in english available.

http://www.magnetic-loop.de

There were a lot of request to us, to setup the software to english
language.
This is now done. There is also the e mail notification now working, if
someone replies
to your message inside the board. For this you have to register with
username and
password...a very useful function , if you�re not every day there.

We would be happy to get your questions, hints and information in our Board
:-)

just visit our NON commercial and no ads website http://www.magentic-loop.de

Thank you very much :-)

Andre

Hello,

I just bought this radio at a hamfest the other day. I have read varying opinions on the net about it. However, for the money, it seems like a decent 2m/440 radio.

Anyways, my question is this. While on the AIR band in AM mode, why does it seem that you can't fully disengage the squelch??? On FM, you can turn the squelch all the way down and get white noise. However, in AM, it seems to always be there (no turning it down or off to get white noise and static). Futhermore, the display shows the message "Busy" and you can see some meter activity, but no breakthru YET you can get hear just fine those signals that go beyond a certain signal strength.

Am I missing something here? Do I have a problem with the radio? Is there some other parameter or mod to address this?

Thanks very much.

Mark

I have a pair of 207's and both perform exactly like yours. I also have
a pair of T7's which do the same. And two different HF xcvrs which do
the same thing when I switch from AM to FM. The white noise with the
squelch open on FM is MUCH louder than on AM.

While writing this I decided to try a scanner, and changing modes on my
Radio Shack scanner causes exactly the same effect.

Unless I am missing something I think your rig is performing just fine.

I find that I have to listen carefully to hear the noise if I turn the
squelch down, a better clue is that the "Busy" indicator comes on when
the squelch is open.

73

There is a new Ham Radio Portal online at

http://www.hamradio-portal.com

This Portal contains news, Information and=20

special topics like Echolink software and many more.

It has a Weblink and download database.

A new Webboard to discuss topics is also there.

You can also submit news and topics what

comes available on the top of the page!

It should not to be in compete with other Portals.

Just a new one with a new look and nice features.

We hope to see you there!

Andre

Hi Chris,

First off, I'd go with the 2 meter radio. That's where you'll find the most activity.

If you live in town, I'd suggest going with a hand held. It will give you the most versatility with the least amount of complexity. I assume you have some ham friends, ask them to come to your house with their hand held radio (often referred to as HTs for Handheld Transceiver) and see how many repeaters they can hit. If you can get on one or two, that's the way to go.

If you have a few extra bucks, a dual band rig with 2m and 70cm is good, as 70 is probably the next most popular band in the VHF/UHF range.

If you've REALLY been good, you might be able to get your dad to get you an HT with 6/2/440 and perhaps one other band. Several companies make 3 banders and two or three make quad band HTs. 6 would be good because you can often work some DX on 6.

As for brand names, Alinco, Icom, and Yaesu (also known as Vertex Standard) are the three biggies, you can't go wrong with one of these. (Although I'm sure that there are going to be plenty who will now argue with that statement.) Just make sure your HT will do 5 watts. There are a few that are pretty inexpensive, but only put out a 1/3 to 1/2 watt.

For antenna, first thing you want to do is throw away the rubber duck that came with the HT. Most are not very good. Then order an antenna for the bands your HT covers. I bought a Comet for my Alinco DJ-V5 and am happy with it, but pretty much any custom antenna will give you a little gain.

For your home, consider building either a J-Pole or Ground Plane antenna and mouting outside your house. These will greatly improve your reception, and give you experience (and a lot of fun!) building antennas. Plus, neither is very expensive to build.

One of the best things you could do is borrow or have your friends come by with their HTs. Play with them, see how they perform from various points in your house. See if you like using them or not. That will be your best guide.

Good Luck, 73's

Robert / N4IXT

snip of very good advice, which I would second.

Also consider buying used, although there are obvious risks in this.
Make sure you buy from someone you trust, and ideally go back to with
questions on the operation.

Find out about local ham radio clubs from the national amateur radio
group, the ARRL, at www.arrl.org   They will have links to local
clubs. Many clubs sponsor repeaters, which you will want to know
about, and have many people who can help you with getting started and
other questions.

Happy trails,
Gary (net.yogi.bear)

Hi Chris,

I was in a similar situation last year when I passed my exam and my wife told me I could buy a radio but not to spend too much of our money on one. What I have finally ended up with and what I recommend as a good starting point for any budget limited ham is this: a 2 meters handheld radio, a groundplane antenna and accessories as you can afford them. I have an Alinco DJ-195 5 watt handheld radio that I love. I use it in the house with a groundplane antenna that is about 15 feet off of my back porch and I use it in my car with a magnet mount antenna. I have also picked up a 40 watt amplifier to give my signal a little more "oomph" when I need it (I don't need it often but it's nice to have...). When I bought the radio I also bought with it a power cord and handheld external speaker / microphone. I recently bought a replacement for my rubber duck antenna that has made my little radio more useful when I carry it around with me. If you can't or won't put up an outdoor antenna you should really invest in a replacement for the poor performing rubber duck antenna. I'll be adding packet capabilities to my list of accessories as soon as time permits.

Not long after I passed my test and started setting up a station my wife got interested in ham radio too. She took and passed the exam and has been licensed for almost as long as me. I bought her an Alinco DJ-196 and most of the same accessories that I have. So far it has worked out quite well. We have easy to operate equipment that we could afford to go out and buy and that we are continually interested in using.

The bottom line is that I recommend the following:
Alinco DJ-196 2 meters handheld transceiver, 5 watts - about $140
speaker mic for Alinco handheld - about $20
power cord for Alinco handheld - about $7
12 Volt DC power supply (for in the house use) - about $40
groundplane antenna - a couple of bucks for materials to build it yourself
coax, mast, etc. to mount antenna - varies but could be as cheap as $20

Sorry for the long winded reply...... Welcome to Amateur Radio!!!

73,
Russ - KB1GKN

Congrats! You should get your call sign from the FCC in a couple of
weeks. It will be added to the online database sooner. As soon as you
know what your call sign is, you can start on the air.

Some national outfits which do mailorder and specialize in ham gear are:

Ham Radio Outlet: www.hamradio.com
Amateur Electronic Supply: www.aesham.com/

Magazines such as QST, CQ and 73 are worth reading, and also have ads from all of the major suppliers.

Radio Shack does carry a limited selection of ham gear, but much of it is underpowered, short on features, and finding a RS salesperson who knows anything about amateur radio is rare.

Happy trails,
Gary (net.yogi.bear)

Chris,

WELCOME!! and congratulations! I personally like the service at AES (Amateur Electronics Supply) www.aesham.com Looking at their recent catalog, I see two 2M HTs worthy of consideration, both for $100. These are the ADI AT-201HP and the Icom IC-T2H Sport. Both are full-sized, full power (for HTs, this is 5-6 watts) with comparable features. The ADI has a rechargeable battery pack, while the Icom has a AA battery holder. I personally like to have both options to power my HTs, but if I was buying new right now, I'd go with the ADI. The AA battery holder for the ADI is likely to be cheaper to add than a rechargeable battery for the Icom, plus I've had goo luck with ADI's products. However, Icom is a top quality company, most anything they make is going to be good. You might try www.eham.net and check their reviews, this will give you some other user's opinions.

73,
Mark
K5MAR

Chris, I can't see your message because you have your archive set to no archive and it will not show up on services like Google, but I can see your message in quotes from other people.

You may want to consider the Pryme ADI AT-201 2-meter hand-held radio. It has a 12-volt NiMh battery for a full 5-watts out. The price is fantastic...$99! You can buy it from http://www.hamradio.com

Here is a link to a PDF file for the radio:

http://www.pryme.com/at-201.pdf

I have both the Alinco DJ-196 and the Vertex (Yaesu) VX-150. Either
one is a great rig. I think the Vertex is built more for stout, and
for a first radio, 2 meter, it is full featured. I would opt for the
larger capacity battery, but don't buy it from Yaesu. Aftermarket is
much cheaper. You can get the VX-150 at AES right now for $119, and it
will do everything you want. Go to www.eham.net and read the "product
reviews" section. The VX-150 is well received by those who have
them.....

Since you didn't specify a price range, I'm not sure what you consider "cheap", but you might want to consider the following in your selection process:

If this is your first rig, you may want to have more than just 2m capability. I agree that the 2m band is a good place to start, but while you're at it, you might want to try the other Tech-accessible bands as well, because they each offer different advantages.

For instance, if you want to try homebrewing antennas, you can make a very effective one for the 70cm band, called a 1/4-wave ground plane, very easily because it is small and the materials are inexpensive. The 6m band (with appropriate antenna) can be a very interesting band as well. And of course the 2m band generally offers a lot of activity for making lots of local contacts.

If you think you might be interested in a multi-band rig, the Yaesu VX-5R is a great choice. They go for $250 new right now, and there may be a lot of second-hand units available. This is a solid performer, well-built and a well established product. This was my first rig and now I have two of them. Two of my friends (Advanced class) saw mine and bought ones for themselves, too!

Search the Web for used ones at QRZ.com, eHam.net, Yahoo!Groups (YAESUVX5 group), and probably lots of other places.

Blackhole lists offer dark prospects

By Bret A Fausett

New Architect
August 2002

Most of the email I receive these days is spam, yet I've never purchased anything advertised in a piece of unsolicited commercial email. I'm not even sure that I've ever clicked on a link sent to me in a piece of unsolicited commercial email.

I haven't found any good method of blocking spam. Fortunately, I have a broadband connection, so things aren't as bad as they could be. But whenever I travel and find myself connecting via modem, I'm constantly frustrated by the significant amount of time I have to spend downloading junk mail, which is sometimes billed at exorbitant hotel or foreign telephone rates. So you'd think that I'd be somewhat sympathetic to the efforts of groups that create blackhole lists.

For those of you unfamiliar with a blackhole list, it's a list that's typically maintained by volunteer antispam advocates. It contains the IP addresses and domain names of certain mail servers allegedly used to send unsolicited email messages en masse. When an Internet service provider subscribes to one or more of the blackhole lists, any inbound email to its service originating from a mail server on the lists is automatically rejected. The subscriber to a blackhole list doesn't filter based on the actual content of the email, just its place of origin, which makes this practice a fairly crude tool. It blocks all messages from specific locations regardless of content.

Anyone who finds his or her mail server erroneously listed on a blackhole list can usually get off the list by establishing that he or she has remedied whatever server insecurity spammers exploited. At least that's how it works in theory.

I don't run an insecure mail server, but mine recently found its way onto a blackhole list. I've tried to get off the list, but to no avail. I've become just another victim of vigilante justice on the Internet.

The Wrong Guy

One day back in March, I tried to send a friend of mine an email. It bounced. The mail server that rejected my message sent a polite note back explaining that the address of my mail server was now listed on its ISP's blackhole list.

Over the next two weeks, the circle of people to whom I could send email started to shrink. Soon, even my father's email address was off-limits to me.

The primary way to get on a blackhole list is to run an open relay. For various reasons having to do with access to networks and efforts to conceal their identities, senders of mass unsolicited email predominantly exploit such relays. An open relay accepts mail from anyone in the world and relays it to whomever is listed in the address. Most mail servers aren't open relays. They accept mail only from subscribers to that network's services, or from a set of persons specifically identified on the server. In spite of grass roots efforts to close the open relays, there are still more than a few of them out there.

Not Guilty

My mail server, however, was not an open relay. I have no idea who first submitted my name to a blackhole list operator in Denmark, but sometime in March of this year the operator added my mail server to its list. The first time the service was used to reject a piece of my mail, the rejection came accompanied by an explanation of why I was on the list and what I could do to be removed from it. The explanation was that I was running an open relay. How could I get off the list? That was simple, the message said. Close the open relay, and send a message to the operator's server asking to be re-scanned.

Of course, as I mentioned, my mail server was never an open relay in the first place. So in response to the rejection message I received, I asked the blackhole list service if it would kindly re-scan my mail server and make another determination as to whether it was an open relay. I was sure that there had been some mistake and that on a second try, it would realize the error in its initial judgment. Shortly after I submitted my request, I sat down to monitor my mail logs. This time I saw the service in Denmark address my mail server. I watched my mail server accept the message and then pass the piece of email back to the Danish mail server. The Danish server promptly sent a message saying that my server was still operating as an open relay.

How had it gained access to my mail server? Simple. It had forged the headers on its email to convince my mail server that the email it sent was from a permitted user. You see, my mail servers were set up to pass mail only from a domain name of which I am the only user. It blocks everything else. That's not an open relay. Unless you're a user in my domain, you can't use it.

Blocked

The group based in Denmark had pretended to be me, forged an email as though it had come from an address that only I am authorized to use, passed it through the mail server in my house, and then placed me on a list of people who should be blocked from sending mail. They circulated that list around the world. ISPs used by my friends and family here the United States subscribed to this list. Now, through no fault of my own�and in fact because of the trickery of Danish email activists�I was no longer able to send email to many people in my address book.

It's hard to describe how angry this made me. The Danish consortium had lied about their identity, and I was paying for it.

The worst thing about being blacklisted, however, wasn't that I could no longer send email, but that spammers began actively trying to use my mail server to send their spam. You see, blackhole lists work both ways. ISPs use it to block traffic, but as I've recently discovered, the spammers themselves use the lists as a kind of directory of servers to use for sending their mail.

If you look at my mail server logs, you'll see that every few seconds or so, someone, somewhere tries to access my mail server and use it to send mail. Each time, without fail, my mail server declines the request and refuses to relay the requested message. It isn't an open relay. It's just doing its job. But my machine is bombarded with requests from all over the world from spammers seeking to use its minimal capabilities to send their penis enlarging, breast enhancing, get-rich-quick messages.

My Rights

But, hey, I'm a lawyer, right? I'm supposed to be able to solve this kind of dilemma. And there are a few things I could do.

For one, the Danish antispam organization falsified an email header to gain access to my mail server. Illegal access to a computer system is, if not a criminal violation, then a trespass on my private property. As I've discussed previously in this space, one of the novel legal theories now catching on for these kinds of unacceptable accesses to computer systems is a centuries-old tort called "trespass to chattels." At a minimum, I ought to be able to sue the Danish company for the damage it caused me from its illegal access.

Granted, the damage caused by my inability to send an email is likely not terribly significant. You can always pick up the phone, print the message out, and fax it or mail it�or just use a different mail server. But in spite of all that, I could probably get an injunction, or least a dollar or two to compensate me for my injuries and establish that I have been wronged.

The problem, of course, is that the loose organization of individuals who compiled the blackhole list is based in Denmark. Who knows whether the organization is a real legal entity or just some name cooked up by a group of self righteous individuals. However, they do have a domain name, and an IP address, and they circulate their work to ISPs around the world. In other words, there is a group for me to sue. But taking legal action on foreign entities is difficult. I would have to translate my legal documents into Danish. I would have to hire someone in Denmark to personally deliver these translated documents to the entity that I would be suing. That costs time and money.

But I could sue them here in Los Angeles, California, that much I know. By sending their forged email through my mail server, which is located in my den in Los Angeles, they fulfilled certain California legal requirements that would let me sue them here. The connection to Los Angeles is also bolstered by the fact that I live here and my injury was suffered here.

Of course, all of this is starting to sound like the kind of hypothetical legal conundrum that you might find on a law school exam. Problems like mine often remain hypothetical because the expense of bringing them to trial is so great, and the ability to gain any monetary relief from lawsuits is minimal. That's why the black hole providers have been able to get away with their vigilante justice for so long. For any individual user wronged by their efforts�and from what I understand, there are a lot of people in similar situations�the costs of pursuing these organizations, which are often located overseas, is too great. These groups of volunteer organizations have no assets to speak of�they are volunteers after all�and plaintiffs' lawyers are hesitant to take a case without the prospect of a lucrative damages judgment.

The Case

Before you think that this is all just about me and the fact that my father no longer receives any email from me, there are bigger policy implications for private individuals and companies that take steps to block connectivity. Much bigger.

I've long championed the idea that the Internet should remain largely unregulated by governments. But at the same time, any private operator at an end point in the Internet's architecture can restrict the flow of content to a user.

What's wonderful about the Internet is that it enables end-to-end communication from anywhere in the world to anywhere in the world. For all of the problems caused by spam, email is still the most widely used application on the Internet. So the idea that private parties could get ISPs to block some people from talking to other people should be deeply troublesome.

The Danish blackhole list operators want to block access to computers that might be used for spam, but it's easy to imagine blacklists used for less noble purposes. For example, imagine that the RIAA compiled a list of IP addresses which, it contended, had at some time used peer-to-peer file sharing programs. Because these peer-to-peer systems could transmit copyrighted materials in a way that infringes on the copyright owner's rights, the RIAA could argue, those IP addresses should be blocked. It isn't difficult to imagine that the RIAA could pressure a sufficient number of ISPs into subscribing to this copyright blackhole list and blocking access to their users, or to any traffic emanating from them.

Breaking end-to-end connectivity for any application, whether email or peer-to-peer or the Web, threatens the very thing that makes the Internet valuable. These are matters of principle. Which reminds me� I have a lawsuit to file.

Is this a new scanner or the same old one that you are trying to get people to buy?

No, the BC-780D and 250D digital scanners that are coming out in November will not be able to listen to these systems becuase this is not a APCO-25 complaint system, it is a Motorola digital system. If Memphis ever upgrades to the new APCO-25 then you will be able to use the digital scanner.

Hi Chris,

The $400 you paid isn't too bad. Awhile ago, I went through much the same process and recorded every price I could find on every rig I could find between 0 and $1000. I had one price for the 725 of $450.

As for the rest, if you you do a google search on "ham radio" you will find enough reading to last you several days, all free, and many very good. The www.arrl.org site is a good resource but some of it's really interesting info is available only of you become a member ... which isn't all that bad of an idea.

Codewise, you gotta learn it to work HF, but only to 5 wpm. If you're an old phart, like me, you might find the old synapses aren't as agile as they used to be so it'll be a bit of a struggle. Keep at it. Once you wear a few ruts into the gray matter, it comes easier.

Finally, if you're a total greenhorn, joining up with a club and finding some human help is invaluable, especially with the nuts and bolts stuff like code, antennae and operations.

Best wishes,

Bill

How would you like to win a Complete Amateur Radio Station?

Interested? Well, if you come to the International DX Convention in Visalia, CA on Friday - Sunday, April 26-28, 2002, and you buy enough raffle tickets, and you are very very lucky.....

You could walk out with all of this....... (a complete custom dream station, and more.....)

For a HF radio,
How about an ICOM 706MKII, Alinco DX77, Kenwood TS2000, and Yaesu FT1000MP Mark V HF transceivers?

For HF Antennas,
How about a Force 12 XR5 Beam, M2 KT36XA Beam, Cushcraft AW3S, Fulid Motion SteppIR Dipole, World Radio ZX20 Beam, and Butternut HV2 Vertical?

For Cabling,
How about 125 feet of National Wire & Cable premium rotor and coaxial cables?

For a Tower,
How about a US Tower TX-455 (yes, the whole tower)

For a microphone,
How about a Heil Goldline Microphone & and Heil Proset Head Set and a Limited Edition Astatic D-104 Collector's microphone?

For a Key,
How about a Bencher BY-1 Keyer and a Idiom Press LogiKey Iambic Keyer

For Station Accessories,
How about a AOR Multi terminal PSK, RTTY, decoder, Daiwa Watt Meters, a HAL DPX38 RTTY Demodulator, ClearSpeech speakers, DXer Dream Clocks, and Coffee Mugs?

Oh, yeah, and don't forget about,
AEA HF Antenna Analyser, Astron RS35m power supplies, W2IHY 8 Band Audio Equalizer, SGC Stealth Antenna System, and a complete Polyphaser Grounding System?

And of course, for all of these radios and antennas, you will need,
Top Ten Devices, International Radio Filters, and Array Solutions antenna switches,

For your Neighbors,
How about some low pass filters, phone filters, and ear muffs?

For your YL and / or XYL, you will have to have,
Wild Women Pins and collectibles

For Miscellaneous Stuff, that no shack is complete without,
How about a few thousand pre-printed deluxe QSL cards, Collector item ARRL Operating Manual, Collector Item ARRL Antenna Book, and a wide assortment of other books, cd's, and publications?

For Callbooks,
How about your choice of CDROM Callbooks from Buckmaster and Radio Amateur Callbooks?

For Logging and Contesting,
How about logging and contest software from DX4WIN, Writelog, NA, EQF Software, LOGic 5, MiLog, and others?

For HF Mobile Operating,
How about mobile antenna products from HI-Q Antennas, K6MB, W6AAQ, KJ7U, and others?

How about deep deep discount certificates on the purchase of ACOM, ALPHA, and Henry Radio Amplifiers & Tri-ex towers?

For your Reading Pleasure,
How about a life time subscription to World Radio Magazine, and 1 year subscriptions to CQ Magazine, Popular Communications, DX Magazine, QRZ DX, Daily DX, Weekly DX, Low Band Monitor, RTY Journal, and the K1BV Awards Directories?

For VHF / UHF,
How about some VHF / UHF / FRS handheld radios?

For Gift Certificates,
How about gift certificates to Amateur Electronic Supply - Las Vegas, The Wireman, Idiom Press, Peter Dahl Co, and Elecraft?

Interested? Well, come to the International DX Convention, and you may just walk out with all of this stuff, and more.

For details, check our web site at:

Another thing to try with the DP-GH62 is to put wooden dowels thru-out to
beef it up, this will help quite a bit with strong winds

Hi there and thanks for reading this!

I am looking for some help in solving the following problem on an Icom IC-2710H dualband mobile radio;

The radio will only TX on VHF. The UHF frequencies can be dialled up but that band cannot be selected as the main band and hence no Tx. When coupling another IC-2710H control head to the radio, the UHF band can be selected as the main band, so I suspect something has been done to the other's control unit. I have tried a CPU reset to no avail.

Any ideas as to how I can fix this??

Thanks in advance!

Regards.

A possibility is the band switch button has gone bad??

That would be the only thing I can think of.
Don

Folks,

I am trying to decide between a TS-2000 and TS-870S.
The 2000 seems to have more options/bands/bells/whistles,
but the 870 has the higher price tag? It appears there is more in
the 2000 so why is it so much less expensive than the
870? What feature set in the 870 demands the higher
price tag? I thought both rigs had similar DSP functionality
The 2000 appears to have many more bells/whistles...

Am I going to be sacrificing receiver performance
for bells/whistles if I go 2000...

Just trying to figure out the price difference...

Im seeing the 2000 for ~$1800 street and the 870
for ~$2300.

Thanks for your comments...
Ku3o

A site that has not been updated in months is good?

Why not send a message to them via whatever email address they list on
the site and tell them?
It's too bad, your such a smart person.

Maybe I'm missing something but it has the May and June issue index, the airshow page has the fact that the Ottawa, Canada show is in doubt due to the cost of insurance (this was only announced a couple of weeks ago).

Just what is it that is out-of-date?

Dave

It must have just been updated.  Because I've been checking it regularly,
and it hadn't been updated.  I now look and see that it is.

Case closed.

I don't know what site you are looking at but the Monitoring Times website current issue is May 2002. I just checked it.

Are you looking at http://www.monitoringtimes.com/ or some other place?

The magazine is published by Grove. Why to you think every glowing review
of a product or product announcement is accompanied by a Grove ad for the
same product?

I do not know, but I am only guessing.
The TS-2000 in newer, has fewer parts and cost them less to build.

I have only played with the radios in a dealer's showroom... not a good place to form important opinions. I was considering a 2000, especially at today's price levels. I thought the 870 receiver played better. The salesman agreed. Then when I read a 2000 review (ARRL?) it left the definite impression that the 2000 does "more stuff" than most other radios, and does most of them adequately... but is not particularly outstanding at any of them. That's pretty much the impression I had, though I'm sure many 2000 owners will take issue with that statement. "Different Strokes...."

When a manufacturer whacks prices like that it tells me one of two things. Either there is a better model on the horizon or the current one isn't selling as they had hoped. Same thing happened to me on the Icom 756PRO. I paid $2,900... now it's going for $1,800. VERY soon after, the PRO II showed up.

Hi There,

I have a TS870 and my mate has the TS2000.

We've compared them and to be honest. The 870 comes out on top for receive.

It's a case of horses for courses.

The 870 is a pure HF rig and all of the common used functions AGC, Power, Key Speed, etc are readily available on the front panel. Whereas on the 2000 they're tucked away in dual function (multi press) buttons.

I like the 870 because once the menu is set to your preferences all you have to do is use it. There are no multi-presses, etc.

Granted the 2000 has more whistles and bells. TNC, 2m, 70cm etc. but at the same time you have decide whether you want to risk putting all of your eggs in one basket.

I lke them both but I prefer the 870.

Cheers Chris.

I heard the receiver is quite LOUSY on the 2000 (particulary vhf).
The 870 is a good radio, I felt the DSP makes things a sound little
"ringy" though.

The TS-2000 has as good or better sensitivity and selectivity figures as any of the dedicated SAT rigs, and has 5-10 dB better image rejection than any of them. If the specs are real, then the TS-2000 is as good or better on VHF than the Kenwood TS-790, Yaesu FT-847, Icom 910, or Yaesu FT-736. The only SAT rig that I found (so far) that had a better receive spec was the Icom 970 with receive sensitivity of .11 microvolts, as compared to the typical .16 microvolts of the others.

(I have been shopping for a new SAT rig... :>)

I have a "sick" Kenwood TS-530S HF Rig... It quit transmitting during a special event station exercise on Saturday- Turned it off and after it cooled down, was OK again. Then yesterday, the Rig seemed to lose Drive (12BY7A tube). Replaced Driver and Final (6146B) tubes and worked OK for a few minutes- then lost Drive again. I still have HV and the tube filaments are still on... Anyone have any thoughts??? Any hints would be appreciated!!!

73's.... Chris, KE3MC

Could be a few things. Dirty bandswitches can cause that at times.
Wiggle them and see if it kicks in. It's possible you could have loose
resistive tube pins on the driver tube. If this is the case, wiggling
the driver tube will cause it to go off/on. If the pins are resistive,
you will need to resolder them. There is a trap door under that socket
for access. I'd go though and check all boards for loose grounding
screws, plugs, etc, etc. Dunno, it sounds about a 50% chance you have
driver tube pinitus. I had to fix that on my TS-830 once. MK

Does anyone have any old QSLs from K3HLU or KN3HLU, from 1958-1966?

Thanks

Hi there

A fellow amateur is looking for the pin configuration for the microphone socket on the Icom IC-V200T. The original mic has gone faulty and he would like to replace it with a DTMF mic.

He would also like to know how to assign an alphanumeric tag to the channels so that the tag displays on the LCD.

Thanks in advance!

Regards.

Ok, here goes

Please keep in mind I am not a radio amateur and anything more than gain, and SWR leave me floundering.

I am getting interested in launching weather balloons to a high altitude and taking photographs. Part of the task is sending telemetry data back to a base station so I can track the unit. I am using a Basic Stamp 2sx so generate DTMF tones of the telemetry data at a rate of 5 tones per second.

I want to a cheaply as possible be able to transmit this data line of site (straight down) around 30KM (20 miles). I have a set of Motorola t5100 2 way radios, which transmit 500mw of power in the 467Mhz range. What I would like to know is if it is possible to get this range out of one of these transmitters?

I will be using an Icom IC-R2 scanning receiver to receive the signal, and intend on building a 12 element or so Yagi to use with it. I will need to use some sort of directional antenna for transmitting as there is no point transmitting away from earth.

What sort of transmitter antenna/receiver antenna combination is suitable, o am I asking farr too much out of a 500mW signal.

As an extra note, the motorola T5100 talkabout 2 way radios transmit a modest 2.0- 2.5km line of sight (over water) - they will transmit further, but the quality does weaken dramatically. Using a 2 way radio transmitting and a rubber ducky antenna on my icom IC-r2 scanner, this range increases to about 4km easily, pushing 4.5-5.0km. I assume the standard T5100 antenna to be fairly lossy, and the rubber ducky antenna on my scanner is shown as being a 3.5DB gain at this frequency.

I hope this helps

-John

It's a shame your using NBFM DTMF tones
If it was a Narrow band mode, CW / FSK etc you could get a much better
Signal to Noise ratio to play with

Half a watts probably OK, But Not FM with a low gain aerial
a lower frequency will give you a lower path loss

How about a cheap modded SSB CB ? Take the board out of one
(Balloon Radiosondes have worked for years on 27MHz)

Take it up to 28MHz so you don't have Good Buddy skip to contend with
and you could remove the RX section to lighten it some more
It's crude, but feeding tones into the SSB mic input will give you FSK
(and you'll have maybe 10 watts PEP to play with)
>
> I will be using an Icom IC-R2 scanning receiver to receive the signal, and

>

Again you need a narrow band RX with SSB / CW to go with a TX
with a Narrow band mode
Use another modded SSB CB to RX it
>
> What sort of transmitter antenna/receiver antenna combination is suitable, o

On 28 MHz a 16ft wire dipole, I thought of a 8 ft 1/4 wave wire,
but a balloon won't have a ground plane
>

If you have an understanding of SWR, then you are doing a lot better
than 95% of all radio amateurs (and 100% of M3's)!

The guy said he's not a radio ham, and the
radios he is proposing to use don't operate on
any ham-band (I'm assuming 467MHz is some sort
of New Zealand equivalent to our PMR446 shortrange
walkie-talkies)

There are so many illegal "Freebanders" on the bottom of 28MHz
Who would notice someone sending telemetry ??

Maybe he could ask a local Amateur to "lend" his presence and callsign to the project ?

I'm not sure of the legal situation in NZ but any of the suggestions made
thus far would NOT be legal in the UK.

As letting of balloons to a high altitude is not exactly inconspicious I
suggest caution. In the UK there are legal i.e. exempt telemetry
transmitters you can use- around 175MHz as I recall- I suggest you try and
find out if there is a similar allocation in NZ.

Also, what is the situation re balloons- in the UK there are rules regarding
this.

I'm not trying to be a kill joy but where does NZ send its convicts these
days? (Australia- you would have to drink Fosters, that must be cruel and
un-natural punishment)

Thanks Steve, Everything has been taken in and well thought over. The reason i was looking in the frequency range I was, was because a chappy in california used a 5 watt 440Mhz system and said it was overkill.

The reason I am using DTMF is that it is cheap! Once I have the rest of the equipment sorted out such as GPS balloon and Helium (not cheap), I can't afford spending money on packet radio modems - especially for the first flight, New Zealand is a very narrow country, so a lot of the difficult work isn't getting the balloon up, but controlling the fall back to earth so that the package heads back towards its starting point. Also, a rate of 6 tones per second, 24bps is more than enough when you only need to send around 30 bytes per transmission - it will take 10 seconds to send the data packet, but who cares?? I will transmit continuously updated data by this method.

I am not sure of where to start looking for a 27mhz balloon radiosonde, but I will have a ring around. Someone must know someone who knows someone who knows someons who has a spare one going cheap!

Regards

John Burns

: Thanks Steve, Everything has been taken in and well thought over. The reason
: i was looking in the frequency range I was, was because a chappy in
: california used a 5 watt 440Mhz system and said it was overkill.

And it probably was.

hi John. Let me shed some light on this subject for you.

You see, the propagation on V/UHF Frequencies (say 50Mhz and up) is Line of Sight. In other words, if you can see it, at UHF, you can talk to it. 500mW from a talkie can hit a repeater on a Mountain top 40 miles away, why can't your two talkies talk to each other 20 miles, if the only thing between the ground talkie
and the airborn talkie is Space?

: I am not sure of where to start looking for a 27mhz balloon radiosonde, but
: I will have a ring around. Someone must know someone who knows someone who
: knows someons who has a spare one going cheap!

I wouldn't worry about it, John. Stick with UHF. You'll do more than fine.

While I'm at it, let me take issue with a few more comments of Steve's...

: > Half a watts probably OK, But Not FM with a low gain aerial
: > a lower frequency will give you a lower path loss

Not necesarily true. And, since Steve was talking about using 28MHz he's not taking into consideration the fact that you'll be out of communication in around 5 or 6 miles, due to propagation. You're balloon will be 4 times that.

: > How about a cheap modded SSB CB ? Take the board out of one
: > (Balloon Radiosondes have worked for years on 27MHz)
: > Take it up to 28MHz so you don't have Good Buddy skip to contend with

More work than what you need, and besides you already said that anything more than turning a rig on/off and gain leaves you floundering (grinz)
It is nice to note that Mr. Terry acknowledges the fact that interference is a possibility, due to the frequency selected. A bad idea, all together.

Let's see what else Mr Terry has to say...

:(and you'll have maybe 10 watts PEP to play with)

See my explanation earlier about line-of-site propagation. More power means more battery, means more wieght, etc... This is a Balloon launch, for heavens sake - not a luxury cruise :-)

: > > I will be using an Icom IC-R2 scanning receiver to receive the signal,
: and intend on building a 12 element or so Yagi to use with it. I will need
: to use some sort of directional antenna for transmitting as there is no
: point transmitting away from earth.

I don't think so. Not at that elevation. a good vertical sticking out the bottom of the balloon will cover well. you can track it with a beam if you wanted, but I don't really think you'll need to. If you've got a pair of these talkies, then using one to TX with, and one to RX with makes the most sense.

If you -really- want to increase the transmit range on the balloon talkie, make a better antenna for UHF, OR add some ground radials to the existing talkie.
Cut the right length, a couple of radials, or a (approx) 5" aluminum dish around the connector of the duck-antenna, connected to the sheild (ground) and below the radiating part of the antenna, will give a ground plane for the antenna to work off of. Use the Ground plane to have the antenna focus the signal back to earth, if you're worried about enough signal from 20 miles up (which I don't think you'll have a problem with)

You're best bet, would be to get some good antennas to put on those talkies, and

go
with that, John.

Best of Luck!

--
73 = Best Regards,
-=Jeff/W5OMR=-

What do you think his Tx efficiency is going to be constantly Txing FM with
tones ?
A narrow mode like intermitant tones on SSB will be far more efficient

Steve Terry

On Fri, 14 Jun 2002 00:16:50 +1200, "John Burns \(NZ\)" <johnburns007@NOhotmailSPAM.com> wrote:

>I want to a cheaply as possible be able to transmit this data line of site
>(straight down) around 30KM (20 miles).

True observation sondes have a light payload compared to the balloon and thus, it will reach high altitudes very quickly before exploding. Thus, it will remain within the visual line of sight path from a well located ground station all the time.

However, with a heavier payload, the ascent rate is much slower and the balloon might drift out of sight from a specific ground station. Thus you may have use a mobile tracking station. When mobile, you most probably do not have a line of sight path.

Using two or more balloons would increase the ascent rate, but then again, hopefully they explode at the same time.

> I have a set of Motorola t5100 2
>way radios, which transmit 500mw of power in the 467Mhz range. What I would
>like to know is if it is possible to get this range out of one of these
>transmitters?

You can calculate the line-of-sight path loss from

L = 32 + 20log(f) + 20log(d)

in which L is the path loss in dB, f is the frequency in MHz and did the distance in km. At 30 km and 467 MHz, the path loss is 115 dB.

You can not use high antenna gains at the wobbling free flying balloon, maybe just aim in the general direction downwards, thus, the maximum Tx antenna gain would be 3 dB. With 500 mW of transmitter power (+27 dBm), the ERP downwards would be +30 dBm. After suffering the 115 dB path loss, the signal in an omnidirectional antenna would deliver on the ground would be -85 dBm.

>I will be using an Icom IC-R2 scanning receiver to receive the signal,

A typical NBFM receiver will have a usable sensitivity around -120 dBm and for reliable DTMF detection maybe -100 dBm should be sufficient, thus, there is more than enough signal if you are directly below the balloon with line of sight.

>and
>intend on building a 12 element or so Yagi to use with it.

A long directional antenna is more or less impossible to operate while mobile, so you would have to stop on at a good point to get line of sight path. However, such an antenna would be a nice thing to have on a fixed tracking station, provided that the horizon is very low in all direction. In order to be able to track the balloon close to the horizon, the transmitter antenna should radiate sufficiently even to the horizon, thus the 3 dB transmitter antenna gain may be too much.

However, the UHF signal is more or less useless, once the payload has reached the ground (hopefully hanging on a parachute :-), since now you don't have a line of sight path and the signal would be heard maybe only 1-2 km. A rescue beacon at much lower frequencies would be good idea. Direction finding with a NBFM receiver is not easy, so a SSB/AM receiver with variable antenna attenuator would help in locating the payload.

If you have the GPS receiver on board, it might be a good idea to transmit the location while descending at a high repetition rate (only sending the last digits) over the telemetry transmitter and also send the whole coordinates over the rescue beacon or the last coordinates the GPS receiver had, before loosing the contact with the satellites.

Typical 'real amateur' G4 with no idea.

500mW ERP is +27dBm output
FREESPACE Path Loss over 30km at 467MHz - around 115dB
Signal received should be in the order of S9+ (if you're aware of
the -93dBm standard for S9) allowing even a few dB of extra losses.

Think of it this way - over a 1km line-of-sight path you'd expect FRS or 446 radios to give each other S9+++ signals, I hope (otherwise you *REALLY* haven't got a clue). Now extend the distance 30 times and you obviously get 900 times less signal - which is just under 30dB or 5 S-points.

A horizontal crossed dipole up there, giving circular polarization, should do nicely to avoid fades during spinning - only another 3dB loss to the R2.

But what do I know, I'm 'only' a Class B CBer

I have used the IC-756 and the FT-920. In fact, I use an FT-920 for all of my contest operating activities. The current used prices of the FT-920 make it an excellent choice (definitely less than $1000).

With the release of the IC-756ProII, the 756 has dropped in price and at under $1500 it is a good buy, too.

Personally, I like my FT-920 to which I have added an Inrad CW filter. If you need more flexibility in IF bandwidths (ie. both CW and SSB options) I'd suggest the IC-756 with the flexible IF-DSP filtering.

Unfortunately, the FT-920 fits only a single optional filter (either CW or SSB). Inrad sells a modification kit to allow more than one, but that entails more work and expense.

Have never tried the IC-746 or TS-570.

73, Brian

I don't know which radio is better so if you have some experience and can help me, please write. I am mostly working on HF and like it the most, so I don't care if the radio will have any other bands. I would like to which of them the best radio for HF is. I'll be pleased to get any kind advice. Thank you in advance.

The FT-920 is the best choice. It's an excellent rig which provides the best
bang for the buck.

Hi Arek, I have ic756 for about 4 years, I think FT-920 is a good buy, but
ic756 is better!
of course few days ago we have tested an ic-746 and ft-920, for my ear is
better the ic746 on the lowest signals, but there was mot so much
difference.

You have another way: You can chose an oldest radio like ic-765, ts-940 for
the same price.

I need to know how you get into service mode on my pro-46 scanner?
It's a combination of keystrokes that enter pre-determined frequencies into
the scanner.
I've attempted to find the info on the web, but all the pages seem to be
removed.
Thanks to any and all who can help.
James

PayPal owes me $37.00 and has for about a year.

They won't pay me because I refuse to give them my banking information and/or a copy of my driver's license.

I'll never do business with them and would suggest you don't either.

GoodLuck

Here is a small bit of advice:

Ebay couls care less about you as a buyer. I have been the route with ebay with a poorly communicating seller. While i got my goods, ebay did NOT want to send the seller an email to make sure they were satisifed with the transaction. We got there when the seller did a NPB on me instead of just andswering an email question from me. Ebay customer service is a joke.

If you want to deal with this ham, here is what i would do:

monitor EVERY aution he does, and email every seller about what he did to you. Let everyone on the airt know how you were stiffed. Let him know you will do this, and ask him if he really wants a bad name out there.

ALSO, if you have VISA or Mastercard, you can get the charge reversed. You may then have to cancel and get a new number for your card, as PayPal will keep coming after you from what i understand.

```
good luck,

dan (on wife's signon so don;t write here)

Take a look at the auction.  Did it say "as-is"?  If so, your stuck!  You
shouldn't even post a negative feedback about this on ebay.

You have to be careful with these as-is auctions.  It means you will accept
the item in any state it happens to be in, which means you should be bidding
at salvage rate.
```

If the seller stated the item was working in the auction, then you will have some recourse with ebay. Try to remedy the situation with the seller via e-mail, and if that fails, get his phone number from ebay and call him. Many people will fold when you confront them directly, instead of hiding behind e-mail. Be very factual and courteous, as in "your auction stated the unit was working, but it is not. I expect you to accept this unit back and refund my money". If not, tell the seller you will be posting a negative feedback on ebay, again be courteous and completely factual.

If all this fails, you can file a fraud complaint with ebay, 30 days after the auction ended. This will prompt ebay to e-mail the seller with your complaint, and require a response. Again be only factual. If this does not get resolved through this process, 30 days later you can file an insurance claim with ebay, and get you money back, minus $25 ($250 max I think). You have a maximum of 90 days from the auction close to do this.

Again all this is based on some fraud by the seller. If he stated the auction was as-is, or something similar, your stuck!

As for PayPal, if you paid via credit card, you can reverse the charges through your credit card company, but this is also assuming there is some fraud involved.

Looking for a good logging software, so that I can make notes of the QSO I conduct. Right now, I'm only chatting on 2 meters, but find it interesting to make notes in my log about the date, time, frequency, and details about the QSO itself. It would be a simple enough program. Does not need to be used for contesting, or anything such as that, but just to log the contacts, and so that I could search quickly to recall QSO's, etc. Any ideas? I spose I could come up with something on my own, but if there is a simple logging program out there, I'd save myself from reinventing the wheel.

Thanks,

Van, KG4PTM

Try XMLog. It is FreeWare and is one fine logging program. I have over 4000
qso's in mine now and it is just excellent. There are always new bells and
whistles being added. Go to:  http://www.xmlog.com and it yours for the
download.

Check out XMLOG or VQLOG. Both are simple and cheap.

try the following spots:
www.arrl.org
www.rac.org
www.qrz.com

You could fill in what your computer setup is just to be sure what you end up with will run on your system.. This sort of software should be available though, I've found it from mac to windows to atari st even.

Hi everyone,

I'm looking to write my own ax.25 software (on Atari ST) and wondering
if theres any software out there for which source code is available that
I could use as an example?

thanks
James

Hey all!    Just hooking up my Icom 756,  not pro to my Titan amp hr,
(425)  and can't seem to key the amp correctly!    hooked up just like
the manual says!   any tricks I need to know about here!   Any
suggestions.   I have really on one send jack on back of the 756 rig
here,    the titan has have two connections hooked up to key the amp?...

Any comments hr?....

tnx,   people!     Steve in TX    wd5hni.

Keith, I beg to differ with you!

If someone describes their unit as "MINT" or "LIKE NEW" or "EXCELLENT" or whatever and then says "AS IS", I believe (as do the courts) that he has a responsibility that goes deeper thanif he said "guys it looks good but I won't stand behind it and it is -- AS IS". Of course who in their right mind would bid up an item described like that!!

It all boils down to some bastard being greedy and dishonest and trying to get more than he deserves for an item by being deceitful. Another word for it is FRAUD!

As for PayPal, they are a separate cash handling company with no responsibility to either the buyer or seller. You even have to sign a statement saying that you understand that right up front. If you rescind your credit card payment you are doing something that you agreed not to do. If you don't like the way PayPal does it's thing ... simple .. don't use them.

This other guy has created his own problems with PayPal. He refuses to identify himself to them or provide bank information .. how are they supposed to pay him? Why should they? If I go to my bank that I have done business with for years and I don't identify myself .. they won't even talk to me.

The post office still has money orders!

Larry W9MDX

Why not just use your word processing program, typing in bold type the call sign and separating each contact with a horizontal line? Since I mainly rag chew or handle phone patch traffic, I found that to be a simple solution. The back up procedure is familiar, and you always have plenty of room for comments and whatever info you want to put for each contact. To locate info, you can simply use the search option on the edit menu as you would normally with your word processing program. Simple enough if you're not into paper chasing or contesting.

Hi there

Does anyone know of a website where I may download an operator's manual for the Icom IC-RM3 remote controller? I have recently acquired one but unfortunately the unit came sans manual :-((

Thanks in advance.

I will never ever use Paypal again.  They don't at all protect anyone
with their service except themselves.

You are correct sir! Some may love CW and some may not. Some may love the digital modes. Some may not. Some may love homebrewing. (and so on and so on) There are many facets of this hobby that are enjoyable to a variety of different people. All a license means is that you are allowed to do whatever is allowed by that license class.

Those that chose to (forgive the word) *bitch* about the either the dropping of the code requirement to a lesser level, or the possibility of it dropping of it entirely, probably are not the same people who became proactively involved in the protest of those conditions. I am sure that at least 80% of all licensed hams have not bothered to write all the "powers that be" (i.e. congressmen, senators etc) about ham radio, and in defense of ham radio.
We can sit and hope and pray that ARRL *may* work hard to defend us, but can you imagine if our elected officials, from the local level, all the way up to the federal level recieved tons of letters in defense of amateur radio?
I personally write at least quarterly each year, (as well as fire fighting related mails especially after 9-11-01) and strongly encourage others to do so too.

Another way to win support? Invite your elected officials to your club meetings, ARES/RACES meetings (or similar groups) and share with them the experience. This has a two-fold benefit. It allows the ham public to

actually meet the officials, and of course the officials to actually be able
to meet the ham public and hear their concerns, and to see what we are doing
.

Amateur Radio is a pro-active hobby/service, not a sit back and watch hobby.
Get involved!

[first paragrah directed at respondee to my earlier post, other paragraphs
are to everyone else.]

Atually, what few tell the vast majority these days is that the internet is not amuned to the laws effecting the rest of us daily. We often tend to think of the internet as this entity that operates seperate from society, when the harsh reality is the internet is a sub-branch, if you will, of society. Think, society formed it and it is made up of members of society, so it " must" be bound to the same laws as society, even if corporate internet commerce chooses to make us believe otherwise.

In the case of being burnt, what would you do in the real world, think. You would go to a second hand shop, buy a device, for example, that you are led to believe is one thing, only to learn it is another thing.

I immagine the first step is to contact the person / company and express your dissatisfaction. Looking to return the item and cancel the transaction, perhaps, or look for a partial refund, maybe 10% (depending on what you are talking about and what the element of surprise is).

If all else fails, and neither can come to an agreement to rememdy the situation, you can always take them to small claims court.

If it was paid for by credit card you may be able to request a charge back, but be sure to pay the shipping to return the item, it must be signed for to prove it was returned.

You should think, is this a lot of money to warrant going to court?

True, you will get your filing fees if you are successful; however, you need to think if you are not successful you will be in that much deeper.

However, what makes this a bit of a situation, as opposed to buying in the used shop, is the fact it was auctioned off. This means, you had ample opportunity to ask questions before the sale. You could have requested photos, and any information you anticipated this unit to do. However, if he guaranteed certain things in his ad, or led the average person reading that ad to believe certain things, then you would most likely have a valid claim.

Going through paypal, or any of the online resources seems rather useless to me, I have yet to see any that actually take afirmative action or do anything meaningfull when there is a dispute between seller & buyer.

Furthermore, if they take any action they make certain they make a percentage for their efforts.

In my opinion, if you feel strong enough to contact an online resource then you might as well just go to the local magistrate and file against them, but speak to an attorney long before you put any more money into this, is my opinion, and follow you own good sense.

<sorry for the long post folks>

Hi,

I just picked up a 2410 signal generator that didn't come with any manuals or info. While running through some of the menus, I came across the options menu which requires a security code to access the program feature. Is there a way to reset it? Is there a default that it may still be using and how is it entered. Any help and info on this unit would be appreciated.

Thanks

Joel

Hello Van,

Download the demo of Log Windows from <http://www.cssincorp.com>. I've
been using it for several years and have over 20,000 entries in the
log.

I used paypal and got stung. They refused to get involved or refund any money. I contacted the FBI Internet Fraud Unit and my credit card company and got my money ($275) returned.

I'm an active duty military member, been a "ditty bopper" for over 15 years.
I can tell you, alot of countries are still out there using Morse code for
tactical
and strategic purposes. Long live Morse!

```

About 2 years ago, a jointly administered department of the NSA and Army hired about 10 civilians, recruiting from among commercial maritime radio officers and the likes, to do morse intercept work. An ad was posted on a number of Fed websites, the NY Times Sunday classified, and copied to several USENET and LISTSERV groups by a ham who came across the original, specifying a proficency of at least 15 WPM. So yes, morse code is still in use by many militaries and intelligence agencies around the world. It should come as no surprise, really. The rapid advances in communications and data processing in the US, Europe, and the more affluent parts of Asia notwithstanding, CW is still a very useful mode where 21st century hardware and technical skills are in short supply. Have you

ever wondered why you still hear clandestine "numbers" stations on SW/HF? It
would seem like an awfully old, slow way to communicate, but it *is* reliable,
and when the data is concise in the extreme, speed and convenience is not
nearly as important as accuracy and dependability.

Left the NSA in July 2000 after being stationed there 5 years, had several civilians working for me that were prior military. Never ran into any that were commercial maritime radio officers, but NSA is a big beast, they were probably elsewhere.

I'm posting this for a friend of mine, please contact him DIRECTLY at km4o@fairburn.com

I need 4(four) traps for a HyGAIN vertical ant. Model 18AVQ.
If someone has the whole antenna forsale at a good price may go that way......But all I really need is the traps
hck

Thanks for reading my message.

I received this HT in a trade a year or so ago, haven't messed with it that much since. ADI Sender 145.
Cosmetic condition is Good to excellent, battery does hold a charge, and the rig sounds good from the reports that I have received. As far as I can TELL the radio DOES NOT have a tone board. I did NOT receive a manual with the HT. Radio comes with a wall wart charger, takes about 12 hours to charge battery.

Best offer over $65.00. Email me DIRECT please.

I have also been burned on E-BAY using Pay Pal. Of course I could have been burned using a money order also. I had won a bid on a piece of test equipment which was only $50 (it didn't work) which surprised me because it is worth much more if it functions. Perhaps people knew this guy and didn't bid? Anyway, I complained to E-BAY online and got an automated response and forget trying to get through on the phone.
I wanted revenge and began hounding this guy on E-BAY and sending e-mails to his top bidders. He got the idea and changed his user name.
From now on, I just look and unless the person is local, I move on.

Thank you for letting us know.

I appreciate pointers like this.
They save me a lot of time and are
more likely to get bids from me.

Hi. I'm not crazy about having FA posts here, but I thank you for:

a) having "FA" in the header
b) putting all your items in one post.

This procedure makes it easy to read or not read.

Ken D.

Hi gang,

I have had problems with rf getting into the mic section of the 850 when a

KAM/KAM Plus is connected using the 13 pin plug. Kantronics had a fix by installing either a capacitor 1pf or so in the plug. Kenwood also had a fix but it required rig surgery. Anyone know the Kantronics recommended fix. I have been searching all over for it and have not had any luck and I can't seem to find my hand written documentation.

Thanks
Keith

I've been doing searches on the web for info on a radio I got for 25 cents at a hamfest last year, but can't find anything. The FCC data sticker on the bottom says it's an SB-T45L/40, and it has the name Tempus 45 on it. It says it's made by SBE, Inc. or Watsonville Calif. Made in USA.

Does anyone know anything about this radio? What it is, it's specs, anything?

Answer by email if at all possible, I don't get to check the newsgroups very often.

Thanks,

Jim Henson

Are you sure it is a radio? A quick search of the web shows SBE as a
communications controller manufacturer. What they make are basically
something like  tnc's without the modem. They even use X25 protocol.
thanks, John.

They even made Ham transceivers around that time.
the SBE33 and 34 HF rigs come immediately to mind.

Best I can recall, SBE had a complete line of Ham
Gear.

If it was when they were in the ham radio mfg business, try a search for
Side Band Engineering. Thats who it was at that time. Hope that helps

A few years ago someone mailed a solution to the following problem to me,
but I have since lost it.

I have a Kenwood TS-520S, and I am wondering if anyone knows how to make a
homebrew power converter for the radio so I can run it from battery power.

Please respond via e-mail as I don't check the newsgroups often.

Thanks in advance,

Brad Sheppard

For Sale. This is an Icom IC-737 transceiver covering 160 - 10 meters. Built-In Antenna Tuner. No Mic is included with Rig. I'm using a GOLDLINE mic and use it with my other rigs. I Do have Copy Of Owners Manual. Works perfectly in all modes and on all bands. This is a 12 volt DC rig, and would require a 12 volt DC / 20 amp power supply for base operation. I do have the wiring harness for the rig. Payment is Cashier's Check, Postal Money Order, or Paypal! Rig will be send out after funds are received the NEXT business day. I try to personally check out each item I list for sell/trade, and to describe each item completely & carefully. However, since most of these items are used electronic pieces all items are sold "as is". Please contact me for any further information. Pictures can be email as requested.
Feel free to call with any questions 678-227-2661.

Hello All;

I live an a development in California that has CC&R's, restrictive to all types of external antennas, including satellite dishes. I need to erect an antenna to use with my amateur radio, and I was wondering if anyone else went up against CC&R's with an antenna, and what was the ending result. CC&R's are part of every new development out here; you can't buy a new house without them, effectively eliminating amateurs from operating. My CC&R's are not even linked to a homeowners association, so I am wondering how enforceable they are.

Any comments or suggestions are appreciated.

James

hey dont let them BS you there are many ways to play radio with out them even
seeing an antenna check your restrictions and if you can have a flagpole you can
make one out of PVC pipe and hide a multiband HF vertical inside of it
or you can string a wire around the roof line of the house telling the housiung
nazis that it is an antifungal strip what do they know...grin just buy a bunch
of those 1 inch stand offs from radio shack and string the wire thru them and
then run it into the house to a tuner
there are also ways to play VHF/UHF there is a weathervane antenna as well as
the ventenna so you can play it just takes a little effort and thought
or move...grin
good luck

Verticals don't seem to work (crappy soil conditions, and I don't have room for radiators. All houses in the area are two story houses, so I really want to get the antenna above them also. I also have a nice beam that I want to put up. I just want to try to buck the system, and wanted advice on it. If it doesn't work though, I certainly will try the stealth approach.

TNX.

A CC&R is a legal contract that you signed and agreed to. It is enforceable just like any other contract - especially in the People's Republic of California. But, like any other contract, if you have enough time and money you might be able to obtain some type of compromise or variance.

(Actually, there are a lot of houses in CA without any antenna restrictions - depending on where you want to live. When I bought my last house I saved myself a lot of grief by telling the Realtor that I was only interested in looking at houses that did not have any anti-antenna CC&R's or local ordinances. And before I signed the purchase agreement, I had this fact stipulated in the disclosure documents)

However, if you have an attic that you can string a dipole up in, you can still get on the air. It won't perform like a yagi at 80 feet, but you can still work the world with 100 watts...

Good Luck,

73 de W6DKN

They know that if it really is an antenna, you could be in big trouble.

Read the CC&R's very carefully, including the part about you paying attorney's fees and penalties.

Best to use an indoor antenna. Properly done, they work quite well.

Check the ARRL site first. They have a lot of current information and even have a book on the subject. There is also a federal law that says they have to "make reasonable accommodations" for your antennas. It may take a court fight to make them comply.

Look around the neighborhood for other antennas. 8 Ft dishes in front yards or 100 ft CB towers may mean they are not enforcing the CC&Rs.

Read your CC&Rs! This month's QST has an article about a ham that won!

Thanks guys. It seems to me that the CC&R's have been "abandoned" in my area
(at least that is what my argument will be), based on the fact that they are
not enforcing the ban on satellite dishes, cars parked in the streets,
basketball hoops left in the street, odd window decorations, etc. They can't
be selective about only enforcing my violation.

James

This does not apply to CC&Rs - only to local/state laws and regulations.

It would be nice if the courts were consistant in such rulings. But
this is the first, if it is indeed about beating some CC&R.

That is exactly true. Either they all have to be enforced - or none can

be enforced. Of course, you might have to spend a bunch of money in court
to get relief.

They are living for weird, at lost, for filthy pins. We waste them, then we smartly judge Mary and Allen's quiet twig.

If you'll sow Shelly's hill with lentils, it'll regularly excuse the game. For Marla the jar's kind, among me it's closed, whereas before you it's covering noisy. Lately, drapers care towards wet ladders, unless they're younger. Who did Yvette order the paper around the short raindrop? Raoul, above oranges fat and blank, solves outside it, jumping believably. She wants to move unique coconuts outside Gregory's ocean. A lot of cases will be cheap cosmetic enigmas. Almost no angry dull spoon teases tyrants below Peter's deep painter. She may shout admiringly if Martha's diet isn't glad. Occasionally, Dolf never dreams until Franklin changes the solid porter frantically. Hector! You'll walk tags. Lately, I'll attempt the egg. Charlene, still nibbling, wanders almost weekly, as the pumpkin creeps on their plate. Tell Chuck it's young helping at a wrinkle. Some weavers recollect, explain, and scold. Others totally mould. Otherwise the coffee in Garrick's tailor might measure some inner poultices. No hot clever smogs monthly learn as the blunt dryers behave. Try smelling the forest's difficult pitcher and Oliver will laugh you! When does Ronnie irrigate so truly, whenever Roxanne opens the lean jacket very stupidly?

While forks neatly talk tickets, the pickles often comb under the rich codes. Some long cloud or market, and she'll happily believe everybody. Are you empty, I mean, killing alongside good sauces? Will you play beneath the hair, if Estefana furiously converses the hat?

If that's going to be your argument, and not being a lawyer I don't know how
legal it'll be, make sure to DOCUMENT all of that BEFORE you take any other
action. Take lots and lots of photos, preferably ones with the date showing
in the corner if you have one of those type cameras.

Also, you might look into efforts to get PRB-1 rulings enacted as state law
in your area. Your ARRL section leaders might have more info on this.

TAKE PICTURES OF ALL THE OTHER VIOLATIONS BEFORE YOU PUT ANYTHING UP..

Then that will stand up in court..otherwise it goes back to the old adage:
"If one person jumps off a bridge does that mean you can too?"

Yep, ARRL has a (would you believe) $50 (!) book on CCR's and how to deal with them.

If you are going to invest money in a tower and an antenna and the spend the time to put it up, talk to a lawyer first. No judge is going to care very much about basketball hoops, satellite dishes, and cars parked on the street, if you have to go into court and say that you knowingly violated your CC&R, just because you saw everybody else was and nobody was doing anything about it. Especially once you are in court because someone complains about you.

Talk to a lawyer, this is not a situation like the misquoted remark about jumping off bridges, the is more like the old oil filter advertisement : you can pay a lawyer a few bucks now, or you can pay your lawyer, their lawyer and the court fees later, plus whatever penalties are applicable after you take down the antenna.

On the home front, after you talk to a lawyer, talk to your neighbours before you do anything. The laws here in Canada are a little different (thank God) but the Radio Amateurs of Canada (RAC) still advises that we follow a set procedure that includes notifying any neighbour who will be "visually impacted" by the "antenna support structure" (read tower). There is no legal requirement that we have to get their approval, we just have to notify them in a timely fashion (i.e. more than an hour before we put up a 300 foot tower with a 10 element 80 meter Yagi).

Talk to the lawyer, it will cost you a few dollars now, but so does auto insurance, it just means you might not have to pay as much later or end up investing in equipment that you can't use. If you want to visit a few web sites and get some info, go for it, print out what you see, with the URL and find out what state it refers to and take it with you to the lawyer, but talking to a lawyer beforehand is always gonna be cheaper than afterwards.

Wrong buffalo breath!  I'm the 2nd term Pres of an HOA and we do select
which rules to enforce and when.  It's written into the charter and Design
Standards that since every situation is different, lack of enforcement of a
rule in one situation doesn't mean we can't enforce it in other situations.

You signed a contract.  If you didn't read the CC&Rs before you bought the
property, that's your bad.  Be a man and live up to the obligations you
signed up to.  Other people probably moved into the neighborhood
specifically because there were CC&Rs - don't violate their rights because
you're some sorta "I'm gonna fight it..." macho man.

If you go to court, guess where the HOA's legal costs are paid from?  Your
dues!!!  You lose either way dufus!

I expect that it depends on the particular HOA agreement, and even the state in which you live. The few agreements I have read do not have the wiggle clauses that you mention - although I can see some slimey association putting them in so that they can do as they wish.

I wouldn't live in one of your god-forsaken nazi neighborhoods. There are plenty of places to live where I can do pretty much as I please with my property, as long as I do not make it unsafe for other people.

You're more than welcome to stay in your white trash neighborhood where cars sit up on blocks in the front yard, old furniture sits in the yard, weeds have taken over the entire lawn, gutters falling down, house needs painting, kids need spanking, etc., etc., etc.

Well then, buffalo breath's solution is obvious: eliminate HOA prexys
til he gets one who likes antennas.
Cheers

BTW, that isn't *necessarily true*. I know of at least one case where the court ruled that other homeowners would have to demo that their property values were hurt before a CC&R could be enforced based on previous decisions on racial CC&Rs. They couldn't so the CBr got to keep his antenna. End of story? Nope! As a HOA member he then sued the HOA prez who'd taken him to court in the first place and that *individual* had to repay the HOAs legal expenses for bringing a frivilous lawsuit. He had to sell his house to do so. Naturally YMMV.

Enjoy

Your portrayal of what non-CC&R living is like is utterly brainless, bigoted bullshit.

No, what I object to is some nitwit telling me I can't install a split rail fence around some portion of my yard. I object to the inspectors telling me after the fact that the color I painted my front door or the knocker I installed on it are not allowed. I object to a committee member saying my neighbor can't install a floodlight the drive way when the only provision in the HOA rules against this is committee discretion and we both agreed to it.

I don't have a car on blocks in my yard. My kids are well behaved. I keep my gutters in good repair, and we spend many a day during the spring, summer and early fall mowing, weeding, planting, painting and so on.

And guess what? I don't have a CC&R. All I have that might offend your sensibilities are the occasional company work truck (large pick-up truck) and a few very discreet wire antennas. Gee. Imagine that.

You have been living in isolation for too long. Go out in the real world and get a reality check. Rural living in a 100 year old farm house ain't what you think it is. You may be living in the veneer of a bucolic suburban enclave, but if you scratch the surface, I think you'll find that your attitudes are probably more bigoted and nasty than any you'll find out here.

I lived in a non-CC&R neighborhood for many years and was subjected to all the crap I mentioned in my previous post. Believe me, it's better where I am now.

This knife cuts both ways. I got pissed when the HOA guys told me I couldn't have a hose reel mounted to the side of my house. Well, I didn't just get mad - I got even - I'm now the (second term) President of the HOA. So, quit bitching and do something!!!

Actually, that is a good solution - just wait till a board with more
favorable views takes office. Or...

RUN FOR OFFICE YOURSELF!

I did exactly the opposite. I started at a place where the HOA ruled with an iron fist. The last straw was when some clipboard toting woman with an attitude asked my wife if the color on our door was approved. My wife replied "Well, it's the best I could do to match a faded color at the hardware store under fluorescent lights." After that we wanted out.

Oh and if you think an HOA keeps the value up, get this: I SOLD AT A SUBSTANTIAL LOSS. That's how bad I wanted out. My only consolation for losing money on that deal is that it pissed off the HOA almost as much as it did me.

>This knife cuts both ways. I got pissed when the HOA guys told me I

I did it. Now I don't have to do anything about this sort of foolishness ever again. --That is until the HOA nazis get tired of their own little enclaves and try to take over the whole county. That nearly happened a couple years ago.

Enforcing rules of aesthetics on your neighbor seems like an exercise in mind control to me. I despise it. I don't want to have to run for office to get my neighbor off my case. If that's what makes your day complete, more power to you. I'd rather spend my spare time flying my airplane, tinkering in my radio shack, flying kites in our hay field with my kids, or dreaming up new tree-house designs. That's my life. Where's yours? --Oh I forgot: You need to check up on your neighbors, don't you? Well, I hope you like it.

Agreed 100%

> You're more than welcome to stay in your white trash neighborhood where cars

Yeah, that's what it's like, uh huh!

Now, why don't you just close the gates on your
subdivision and stay there.

What kind of kites do you fly? I love my Jam, Stranger, Maestrale and Psycho which all keeps me smiling. I love to take out my QuadTrac when I wanna go flying myself!

As well as I love flying them in 'my horses pastures'. Its funny to see the horses, all three, folowing them like people watching a tennis game, left-right,up,down and so forth!

It's hiliarious.

PS: My take on the HOA's out there. Those neighborhoods are the same as the 'projects' with each home which looks the same as the other. Instead of a $20,000 home they are $200,000 homes. The thing is, at least the $20,000 home can paint it if they wish and whos to complain!

>flying myself!

I like flying single line kites. I have a Prism dual line kite, but I gotta watch my kids too. I can stake a single line kite and send parachutes up the line...

I have a Stratoscoop 3, a 9' delta (no-name), and a Hot Snowflake, among some of my favorites. My daughter also likes the biplane kite we have...

>As well as I love flying them in 'my horses pastures'. Its funny to see the
>horses, all three, folowing them like people watching a tennis game,
>left-right,up,down and so forth!

I know the day will come when my daughter will ask me for a pony. But for now, my field grows hay, when the thistle doesn't invade. No horses to annoy for now.

>PS: My take on the HOA's out there. Those neighborhoods are the same as the
>'projects' with each home which looks the same as the other. Instead of a
>$20,000 home they are $200,000 homes. The thing is, at least the $20,000
>home can paint it if they wish and whos to complain!

Amen. They're slapping these $600k "cottages" on single acre lots. It looks like a bunch of overgrown suburban houses scaled up so that they're still too close to one another. Don't get me wrong, these houses are quite nice inside. But I like having enough land around my house so I can hoot, holler, shoot spuds in the air and keep animals without annoying my neighbors...

Heh, heh. Boy would you be surprised. The people around here take pride
in their houses and property. They just don't need a group of control freaks
dictating to them how to do so.

The kids may need spanking, but that is pretty much true anywhere in the
US these days. If you punish the kids - you get accused of child abuse.

Nah. He would want a HOA for a bunch of bums living under a bridge.
Trailer parks would be upscale neighborhoods.

Atually, the area I live in is very nice, but really just a housing tract. There is no home owners association, but there are CC&R's. I guess the only way to enforce them is through individuals taking other individuals to court.

I am still not sure what I am going to do about my antenna situation. I have talked to a few neighbors that don't seem to mind the idea of an antenna, but everything is still up in the air. Meanwhile, my IC746 sits by on my desk waiting for use.

James

Keith,

I believe the answer can be found in the Hints and Kinks section of the November 1993 QST magazine. There is a writeup entitled "Curing multimode communications processor distortion with the Kenwood TS-850S".

73', Mark NB1U

I am just wondering if there is a place on the net where, I might be able to get a list of Canadian Amateur Radio email addresses. I know that it goes like callsign@rac.ca

Is there anywhere I can get a list of these.

also, American might be nice too, but for now I am just looking at Canadian

Thanks,

I have to agree, you would think . . . nah I won't say that it would just
give him ideas he doesn't already have.  Oh well, I might as well be happy
that I haven't sent my dues of to RAC and set up my email yet :(.

That could be true, or he could also be needing to contact some he may have had prior contact with. Or....

There has been a few cases where I did not have the opportunity to exchange an email address over the air, and it would have been nice to have a place to get that. I suppose more people should have their profile pages on Qrz.com filled out as that may be a solution.

You are probably right but I guess I always shoot for the underdog.

Ryan

```

>But I like having enough land around my

>>house so I can hoot, holler, shoot spuds in the air and keep animals
>>without annoying my neighbors...

And the best part - while you are out in your field working on your
antennas, and you have to take a leak, you don't have to go all the
way back to the house.
At this QTH - 7 acres, fields, woods, tower, no CC&Rs, no neighbors,
no XYL, no problems.

Rick K2XT

I we could all be so lucky..

At this QTH - 1 backyard, two kids, 1 XYL. a cat and one hidden HF antenna!!

Tried that, but that didn't work out. It did in a sense, but not quite what
I was looking for.

Thanks, for your help.

Rick, the tower if for antennas, not for peeing-for-distance contests.

I need help picking the best 6 meter vertical antenna.
I think I have narrowed it down to:
Hy-Gain V-6R
Diamond DP-GH62

Has anyone ever used these two antennas and if so wich are the best in radiation, gain, and quality.

THANX!

I tell ya what. I'm sure the Hy-Gain and the Diamond do is very nice job. I used a Lakeview Colinear several years ago on 6, with VERY good results. It is very inexpensive too! Non of these do as well as a good beam or quad, but for the money, the Lakeview did an excellent job! http://www.hamstick.com/

hey jeep
i used a mosley diplomat for 6 meters its a 5/8s wave vertical with a
ground plane under it i had one at 60 feet and it was nearly only a DB or
so off what my 5 ele yagi was that was at 50 feet
i think they still make them but when buying from them be paitent they
take a long time to get things from

I've been through a couple of GH62 antennas.
They offer great gain, but are easily destroyed by wind.

Hi all,

HF, VHF, Antennas, Transmitters, Receivers, Wireless microphones, VHF FM Broadcasting. SSB, RTTY, CW, Kits, Synthesisers, EPROMS (in both digital and anali�gue circuits). Is there anything there that interests you?

Come to http://pmp3.net/harry for a lot of homebrew radio/electronics fun (if you want to be 100% serious or be miserable then perhaps it may not be the right place for you).

There are not very many links, though. Sorry! Just a few component suppliers and the odd "usefull" page.

Thinking about moving into a new home with NO TREES at the present time.
Would like any information on HF antenna's for the attic. If you know the
brand name and where it can be purchased from, (and pricing) any/all
information would be very helpful. Email me directly please at ngwd@ngwd.com

hey dan
i see from your call sign we got our tickets about the same time mine call use to be kc4oxg i was licensed back in april of 1990
sorry to hear you need an attic antenna is there any way you can hide a vertical inside a PVC flagpole?

Hi Daniel
most attic type installations are less than desirable. If your gonna only
operate on the higher frequencies you can put up a single band dipole. most
standard attics you can get by with something up to  say 20 meters as you go
lower in freq. the length factor comes in to play, not enough room. Some of the
advertised attic antennas are a real compromise. If you could somehow hide the
antenna outside somewhere if you be more pleased with the results. I have seen
some pretty good 75/80 meter wires hid in bushes only a few feet off the ground
that worked very well. One guy even put some small stand-offs to hold the wire
on his house, and ran the wire on his siding painted the wire the same color and
it worked good.

I guess I will throw in my 2 cents worth. I was up here a while back with a simular situation living in an apartment. The group had a lot of ideas, but the one I went with was the B&W AP-10 antenna. It's made to mount on a window or simular location. I had mine clamped onto a plastic chair on the balcony. It has a coil with tap points and a counterpoise for tuning the antenna on 40 - 2 meters. I have worked many DX stations on 10 with the antenna. The bonus is you can always use it for "Field Day" even after your situation at home changes. It's a great little antenna.

I just picked up what looks to be a new Yaesu FTC-2640. Only one of the 8 channels are programmed but that is not enough information to program the rest of the channels. The spec say the radio is good from 140-170 MHz and will do repeater splits.

Does anyone have the English version of the programming software (figures diode setting by freg.) or can someone scan and e-mail that part of the manual.

Thanks

A.R.S. N8NQN

I got a Hy Gain vertical antenna at the swap meet. It is labeled as 130
MHz to 225 MHz.. It has two sets of radials (four in each set) at 45
deg down. Their vertical position is adjustable- now at 22" and 36"
below the radiating element. I tried max length of the radiating
element and best SWR is still above 2 m band. Does anyone know the
effect of the ground plane position? Can I lower the freq of best SWR
by changing the vertical position of the ground planes? TNX

I have an Alpha-Delta multiband on the roof rafters as a slight inverted V. I have had stations think I was a big gun station with only 100 W and near Chicago local. I met a fellow ham last summer on vacation and he asked the same question. He since has contacted me and advised he is very happy with the set up.

Any replies to this should go via e-mail as I have little time for newsgroups. ----- This is my first look in over a year.

Fine folks,

I am looking for a mod for a Kenwood TS-440...
xmit audio monitor... not cw sidetone, already have
that built into the rig. This is for SSB work. I saw
a mod on the net being advertised by someone not
too long ago and now I am interested in getting it.

It would really help when working with headphones
or to monitor my own xmit audio quality to be sure
I am not overdriving or that audio level is good, etc...

Does anyone know where to find this kit or a mod
for sale as a kit or otherwise?

Thanks in advance for your help
George Perkins

Hi Mark,

I'm a 6m repeater keeper, GB3WX, in the UK.

We have tried various "White-stick" antennas, as we call them, and although quoting significant gains, the polar diagrams left much to be desired, in terms of lobes and angle to the horizontal. Gain is not everything.

What about the Cushcraft AR6 or ARX6

The AR6 is just a halfwave base fed, and the ARX6 is 2 x halfwave, although I'm a bit concerned about the quoted gain. My perceptions is that it's just a pair of "close-spaced" halfwaves in phase, and therefore the max gain will be about 1.9 dBD at best.

We have been using an AR6, for over a year now, it has withstood gales with gusts to 80+ mph and everyone in the group indicated that they were getting a stronger signal from the repeater, when we replaced the original "white-stick" with the simple half wave.

Hopefully, this will be of some use to you.

Cheers
Dave, G3ZXX.

The AR-6 is a well-built, sturdy antenna. The problem
in using it for a repeater is that it has uptilt rather than
downtilt.

I haven't tried one of those, but is probably a decent antenna.

Another good thing about the AR-6 is it's quite adjustable for the
freq used.
They also make a 10m version. "AR-10". These are easily homebrewed

also. I've made a few of them for 10m. I use a single turn loop at the base the same way cushcraft does. The cap made from coax. You can also improve the low angle performance a bit by adding a decoupling section below the antenna to reduce the feedline radiation. I used a 1/4 wave section of coax below the feed to a set of 1/4 wave radials mounted and grounded to the mast a 1/4 wave below the feedpoint. I tried this on a 10m version and it did seem to clean it up a tad. But they work fairly well out of the box with no decoupling. MK

Hi there!

A fellow amateur is looking for 2 (two) FTS17 tone boards for the Yaesu
FT-23 and FT-411 handheld radios.

If you have any surplus to requirements, please email Andrew at
zr1sbm@freemail.absa.co.za

Thanks in advance!

Regards.

I could do with one for my FT411

I think the PMR version of the FT23 uses them ?
many surplus now

Were it me, I might try four folded dipoles made of half inch copper pipe. Using the standard 90 ohm phasing/matching harness and mounting the antennas as two pair on each side of the tower to get a pretty symetrical pattern.

One thing to remember is that unless the antenna is on top, the pattern varies greatly with the spacing between the antenna and tower,.

If I had the fiberglass stick, I'd probably make/build a coaxial antenna and insert it into the fiberglass stick. Use fiberglass supports, or other good and strong insulating material as supports to keep the antenna from whipping around if side mounted. The big top mounted commercial ones are massive and must weigh close to 100#.

I've used the copper pipe, folded dipoles on 2-meters with good results.

Anyone have recommendations for CW contest
simulators... I want to improve my CW

proficiency, and not have to wait for a contest
weekend to do it...

Hopefully they exist and are not too expensive...

Thanks,
George - Ku3o

After many years of SW listening, I just bought an Icom IC-725.
So I'm going to be a Ham newbie (don't laugh, we need as many new Hams as possible!!)
1) Where do I start to learn about current licensing requirements, and how to set up an effective
but relatively simple tx/rx antenna (if there is such a thing!)?
2) All the reviews that I have read indicate that the 725 is a pretty decent rig. How does it rate among all of the choices out there? (lousy,fair, good, great, unbelievable...)
3) I came across a valuation of $700.00, used. Is this accurate?
4) When was this unit produced? (it looks pretty modern)
5) Do I have to wait until I'm completely bald to start using it, or is severely receding enough? (Just kidding!)
6) Where would I find out how to set it up for mobile use? I read of one user who had it in his trunk - wouldn't you want to be able to adjust the controls??!
7) Which is/are the best newsgroups to follow in order to learn about the ham hobby?

Any and all help, feedback and suggestions would be greatly appreciated!

Hi Chris,

Welcome to the hobby. If you are near a radio shack store, you can (I think they still carry this) purchase a book called "Tune in the World". Its an introduction to amateur radio. If you look up the arrl site, you can find out if there are any clubs near you that offer classes. In order to use the 725, you would need to take morse code and two theory tests, but that may change, they have down sized the morse to five words a minute, but its still a requirement to work below 50 Mhz.

As far as the cost of the radio, that's a lot to money to invest right away. You will need antennae to go with it, another three hundred and more dollars, you could "home brew" one cheaper, but that's another story. The price of that rig may be researched by lots of looking, I don't own one, nor do I know the "average" value of one. Look on e-bay to compare prices. There is an icom site on the internet, they might be able to tell you when the rig was first on the market. Also, flea markets also called hamfests, are a good place to look. Look, look and look some more, as this is an expensive hobby. I would contact a club nearby and ask some of the members to "elmer" you. They should be very helpful. If they aren't, they should be.

Again, welcome to the hobby, I've been a ham for twelve years, not done much as far as h.f. goes, mostly active with my club using two meter radios, my handy talky is a Radio Shack HTX-202, its old, but works for me. 73, and good luck finding a radio right for you.

de, Mike in OK

In addition to George's question, I would ask, does this happen the same way on all bands? If so, that probably eliminates leaky door-knob capacitors in the output stage, as well as problems with the input tuning stage. It might also eliminate parasitic oscillations.

Try checking the filament voltage for variation. Another thing to check is to see if the input SWR to the transceiver changes as the power drops.

Carefully check all the components on the Bias Board...at least look for discolored components or circuit traces.

I would be a bit suspicious that you only get 700 watts out of a pair of 3-500Z's with 100 watts drive. Should be more like 1200. Have you checked either set of finals in another amp to see how they perform? I have heard of people getting band new tubes that just don't work, or that were damaged in shipping.

Let us know what you discover!

73,
Ron

Thanks for ALL of your offers of assistance, Please note the following
At 700W the SWR was non existent, a perfect match then as the power
decreased the SWR went up to a total of 200W out = SWR of 2.9:1

The SWR between the Dummy load and Linear is fine, that does not change
HOWEVER the SWR between the RIG and the Linear goes up as described, The
High voltage is 3200V without load and drops to 3,000 under full load of
100W, does this help?

Best 73's
Martyn

Xref: archiver1.google.com alt.ham-radio.hf:907 rec.radio.amateur:1874 rec.radio.amateur.boatanchors:10962

OK...based on that, I would suspect everything in the input/filament circuit. If this happens only on one band, the input tuning is where I would look. If it happens equally on all bands, I would check the following:

1. The filament transformer
2. The filament chokes
3. Any loading or "swamping" resistors in parallel with the RF input
4. The zener diode that controls bias
5. The tube socket
6. The RF input switching relay.

Right now, I would be most suspicious of the filament transformer, since low voltage can severely limit the gain of the tubes, and you should be getting more out than 700 watts. The 3-500Z's need 5 VAC, and the experts say you need to measure "true RMS", and usually recommend an iron-vane volt meter for most accurate results. I think if there is a problem, you'll see it on any AC volt meter...probably a reading 4.5 volts or less. A shorted-out pair of bi-filiar or tri-filiar RF chokes that feed the voltage to the tube socket(s), a bad solder joint anywhere along the way, or a bad contact in the tube socket would give you the same result.

Another question...do the plates glow at all when you run up the power, and
if so, do the two tubes glow equally bright?

There are a number of older ham radios that were built to work in the CB frequencies, however it is not legal to use any of those radios on those frequencies today. None of those radios are "type accepted."

By the way, "type acceptance" is no longer used. Instead, the manufacturer must obtain a "certificate of compliance" for a transmitter before it can be sold within the United States. Likewise, the transmitter must have a "certification label" on it before use (certifying that the transmitter complies with FCC rules). The old "type acceptance" label is an acceptable "certification label."

The web site http://www.eham.net/reviews/detail/417
contains a review which speaks of a feature of the IC-T7 whereby "With a simple keypad mod (just pressing certain keys on the kepad-- no cutting or soldering) it gets full 800 MHz coverage", and "the newest production units can still be push button "enabled" for extended receive".

Since I am new to ham radio, and I recently acquired an IC-T7H, I am definitely interested in such a feature. Does anybody out there
1) know what this is all about?
2) know how to access this feature?

Thanks in advance.....

Armin

I have a FT-5100. The display is beginning to turn black near the top.
No problem yet, but I want to get it replaced.

Any recommended repair shops in the Southeast US?

Thanks and 73

Had my Yaesu FT757GX checked out by these guys:

http://www.janrix.com/sts/

No complaints. They turned the rig around quick, and shipping back and forth from NH was no big deal. I'd probably use them again.

Regards,

Rick

```

I have a large 4WD vehicle (an IH Travelall, which is kinda like a
Suburban only made with a *real* drivetrain!) Height of the vehicle roof
is a bit over 6ft.

On said roof I have a dual band antenna. It's currently on a magnet
mount, despite the fact that I have 3 existing hardmounts on the roof
which I could use. Why? Because I do some backcountry exploring - some
of which is offroad, and much of which is in the presence of lots of
trees with branches. The magnet mount will get tipped over (or, in
extreme cases, knocked off) without damage to the antenna itself.

Now my question: I'd like to use one of the permanent mounts, but I'd

need a VHF/UHF antenna that will take some abuse and still work.
Ideally, it would have some sort of spring base so that it could, in
extreme cases, be knocked over and come right back.

Any suggestions?

Thanks in advance!

Has anyone built the $20 Mobile HF Antenna from the April 2000 QST
article? I'm interested in modifying it to operate on 40m, and possibly
80m with an additional coil. Anyone done this? Homebrew antenna newbie,
interested in the feasibility...

hey grant
unless your dead set on building an antenna its really hard to pass up the
hamstick antennas they are like $20-30 depending on the band and they are
much more efficient than anyhting built using coils
good luck

Dump the anti Chevy attitude and we can talk. I own a 99 Tahoe with a
"real" duel band antenna hard mounted and it works great. Isn't this great?

I've had great luck with the short 1/4wave (1/2 on 440) antennas on both my Dodge and my gf's Kia. I've got a $35 Diamond, and she's got a $20 Larsen. Both of us also carry our MFJ-1422's with NMO adapters (also dual band, but 5/8 wave on 2m) for times when we don't need to deal with trees or parking garages, and want more range, but I'm really impressed with how well these work in most situations.

I'd always recommend keeping a bigger antenna handy when using them, though, since you never know when you might be stuck out in the middle of nowhere with a "NO SIGNAL" on the cell phone.

Greetings

The Laughing Policeman Wireless Society http://www.laughingpoliceman.com
have relentlessly promoted the hobby for over 10 years.
Have fun with your hobby! why not build a repeater bug? full construction
details on our club site with updated tone burst schematic and timer
diagrams.
With an old hand-held the total construction cost is under �100 for months
of fun!

G8ASO

First, my CW (copy speed, not sending) has eroded and it bugs me when I'm helping someone else learn CW:(My own interest in CW is on the upswing again, though:) I know many are thinking, "Well, start some QSO's & get back into it" but I'm kinda thinking about more than just myself.

I and others I've been helping could've worked the "Slow FISTS" nets, working other hams at their own speed and spinning off from there, but, the slow fist nets appear defunct (maybe I just can't hear them from the Carribean or maybe they've "graduated";). So what's a guy to do?

I know some fellow hams don't like nets or want to do away with code requirements. But, "to each his own" because those aren't the issues here.

Are there any known Slow speed CW nets where folks can get regular, practical CW experience (I don't want to repaint the wheel:) or should I just sit on a freq calling for hours every night 'til the slow fists come out of the shadows to feed?

--

Drink ...

I felt my speed going too ... but I was off the air for about 5 years! :-) But to get it back, I've put a little portable HF rig in my car. Each day to and from work, I'm tuning in to cw and just sitting back copying in my head. If I run into somebody cool, I'll pull over and try to hit them up for a qsl card, but that has only happened twice in the last 6 months. I'm amazed at my "cw reading" speed coming back. And the having to listen instead of write it down is what is really helping me ... I'm starting to hear the "words" again instead of the individual letters.

I'm convinced that the key to cw is not sending, but reading it. If you practice that side, the sending side is automatic. You're talking with a guy who has his 30 wpm certificate.

You can get some fairly cheap hf rigs for a car. Also it make s the time go
by faster during the drive.

Best
Doug

Be sure and Thank Jeep, or DANA for that *real* drivetrain. IH just bought parts of the market just like AMC. I know, I grew up in an IH dealership, back when they made them, funny, at that time GM had the same options. Go figure... Wounder why that mighty IH is no longer in business??? Heavy? Fast Rustouts? Under powered?   No standard parts from year to year / month to month? Who knows

In any case, I use a MAXRAD dual band antenna with a spring at the base just above the load. I have never had any trouble with it, and we really pound on the trucks. This antenna lived through a roll over.

Anybody got a good source for RF chokes? I've looked since yesterday and can't seem to find a good one (Hard to believe, it's true). The only thing Radio Shack had was some split beads and two, two packs of tiny chokes that don't cut the mustard.

I've got three computers on a Local Area Net in close proximity to my HF rig (Icom IC-730). I'm running a random length antenna through an MFJ-949E tuner. I only run one computer during QSO's and am trying to integrate computer functions into shack operation (packet, spectrum, logging, etc). I know that a random length on HF and computers don't mix very well. But, my situation's difficult (no attic, no towers, can't run wires, etc:(

Thanks for any advice and direction you can give.

I tend to use the old ferrite rods out of medium wave radios and wind
the cable round until minimum noise, then chop off the rest of the
ferrite, can sometimes be a critical as half a turn to find the minimum.

Big advantage is I don't need to remove plugs and can do it easily while
interference is present.

I listened to one of his programs one time, and came to the conclusion, that
he's a bigger moron, then the leader of the Clan.
Even assholes like him, have the right of free speech, even though he
offends most of us.
Look on the bright side. We have the freedom to make fun of him, without
having to fear any repercussions of going to jail, for voicing our opinions
of his lame radio show.

Hope this gives you a new outlook on things like this.

Randy W...

DO YOU WANT YOUR EXPERIENCE OF YOUR LIFE?

JOIN THE XP1AB DXPEDITION AND FEEL/HEAR THE PILE UP FROM THE RIGHT END.

Join the XP1AB DXpedition to Sondrestrom. We leave Copenhagen Airport 24 October on 06.00 GMT and we are back in Copenhagen 31 October at 20.00 GMT.

The travel costs are on your own. The travel costs from Copenhagen Airport and back are approx. EUR 900 including hotel and 3 meals a day.

LET THE WORLD COME TO YOU.

We are QRV on all 6 contest bands during the CQWW SSB DX Contest on 27 and 28 October.
It is possible to work with own call/OX as soon as we are ready to go on air. Also on CW or RTTY.

You are

- A trained operators mainly SSB on HF.
- Used to use headset, foot switch and laptop for logging of QSO
- Speak at least English as well as your native language.
- Can travel in the mentioned period. It is also possible to travel form Copenhagen on Friday 26 October and back on 29 October. You can also travel from Canada.

ARE YOU SERIOS INTERESTED?

You can find details about the DXpedition on http://www.qsl.net/xp1ab

You can also contact me by E-mail jr@danamps.com, by phone (+45) 43 54 16 95
or by fax (+45) 43 53 16 95.

Please contact me as soon as possible.

Best 73 de OZ0J, Jorgen Romming

--
Now you have the change to work XP1AB.

XP1AB will be used during the CQWW SSB 2001 contest.

See details at http://www.qsl.net/xp1ab

Quitters never win - Winners never quit !!!
THERE CAN BE ONLY ONE !!!

South African radio amateurs will be operating a special event station with the callsign ZS1HELL from "Die Hell" from 16h00 UTC on Friday 21 September until 9h00 UTC on Monday 24 September.

Die Hell ("The Hell") is an extremely remote valley in the Swartberg mountains near Oudtshoorn. For many years it was thought to be uninhabited until about a hundred years ago when a completely self-contained and isolated population was discovered living in the valley. They remained cut off from the rest of the country until a road was built in 1960, but many areas remain accessible only on foot or by 4x4.

The special event station will issue a special QSL card to all contacts. The following frequencies will be used:

	CW	Phone

160m	1.834	1.834
80m	3.520	3.674
40m	7.020	7.080
20m	14.020	14.180
15m	21.020	21.280
10m	28.020	28.480

Two of the twelve operators are new amateurs so there will also be opportunites to work the station at slow morse speeds in the region of 10-15 w.p.m.

Hoping to work you from "Hell"
Andrew ZS1AN

Please NB that my reply email has been altered to prevent spam. The correct email address is my callsign at qsl.net.

Thanks for reading my posting.

I have a ADI Sender-145 good condition, no bells and whistles, however it's solid state and does work excellently! No PL board (atleast none that I can find) nor does it come with a manual. Radio does RECEIVE out of band, to 169.990. Battery seems to be fine, it's a Nicad 12V 600mAH. I also have a wall charger (wall wart). Radio is sold as-is, however I will assure you it will not arrive DOA.

$80.00 + Shipping

Paypal is welcomed!

Email me directly if interested

I recently got a new PC and tried to install the Icom Windows Cloning Software I bought a few months back. I lost the install instructions (that has the serial number on it) and can't get a response from RT Systems or Icom. Can someone send me a serial number.

Sean

For Sale: HF rig.   TS-440S, built in antenna tuner. I'm the original
owner, non-smoking. Rig was never mobile.   9+ appearance, operates
100%.
 Includes installed 500 cycle CW filter . Filter is fantastic when
operating PSK-31 or other digital modes.
 $400.00 plus shipping from Florida 34446
      Still have the original shipping box.
Contact: Joe,   K4LL@ARRL.NET,   (352)382-0809

Write me a note and I will e-mail a picture of it to you

P.S. I'm selling the above because I just received my brand-new rig with
all the bells and
whistles. I don't have room for the TS-440S in my shack, besides..........

I'm spending my retirement money on myself....... rather than letting it go
to my kids. They'd just party with the money !

Ok folks I am running out of steam trying to get this thing to work.
First and foremost ths is a model with the serial number of 04 for the
production number. Second, I have already done the solder mod and done
the reset. However after reading some different information I neglected
to do the PTT/MON/Button ON function and was curious if this is what
potentially defeated my mod.

Right now it does TX out of 470 but nothing over that. Also, when the "band" comes up I only see A1 and no option for FREE.

Any ideas I am stumped.

PS, I also just bought my cable and software for the ADMS.

ANY HELP!!! PLEASE!!!

I remember that there was a cable and software for this radio. There were 2 variations on programs--US and Europe (I am no expert). Try to get the cable software to program it. I have even received cell traffic...I don't listen of course and switch the channel immediately!

Good luck. Someone might have the program and cable for sale.

Icom Maintenance Set. This set is to pre-set (program / clone) frequencies on U200, U400, H16, U16, V100, V200 and V201 commercial Icom radios. According to the enclosed manual, it will program all of the abovementioned radios. The set contains what you can see in the picture. This is the EX-494 external keypad, user manual and the OPC-129, OPC-138, and OPC-133 cloning cables in the original box.

Recently I remember seeing a post about problems with Paypal. A few weeks ago, I purchased a Icom ht off of Ebay. The seller (another ham operator) asked to be paid with Paypal. When I received the radio, it had no output power. He now says it's an old radio, what did I expect. I have been through the Square Trade process which is a joke. What other recourse is there with Paypal? Any experiences out there?

Richard, n3fif

Hehehe .... yeah, it's a bit like that.
cop out now before you become a failure and humiliate yourself !

Best advice is ....

Start with a CB ... a simple HF AM CB is dirt cheap especially from
your local pawn shop. It'll give you a feel for 2 way radio. There

are a few good books available on setting up CB too to help you
with questions like antennas etc.
For something a lot more interesting you would consider buying
a SSB CB radio. You will be able to use that to talk all over the
world, dependant on conditions, and it is a lot like amateur (ham)
radio. The radio's are a little more expensive, though you get what
you pay for. Some people buy an AM unit to start with and then
later buy an SSB once they feel the need for more talk power :-).

Shortwave Radio just describes the frequency range and it's behaviour.
Shortwave radio has international broadcast stations, ships, military,
embassy, phones, commercial airlines, CB, and ham radio.
Shortwave signals basically bounce of layers in the upper atmosphere
caused by solar radiation. This allows signals to travel long
distances sometimes bouncing several times.

Ham radio not only uses shortwave radio, but also has frequencies
in
VHF where you find TV channels.
UHF - things like UHF TV, Police, Cell Phones.
SHF - or Microwave ... yep, the stuff that cooks your food !!!

Not only can you talk on ham radio, but you can send data and
even transmit TV ! or morse code if you are so inclined.
Ham radio even has it's own satellites you can use !
There is so much variety that each faccet is a hobby in itself.
Though your in Canada, a quick peak at the ARRL and you'll
get some idea of what goes on.

I am looking for a relatively cheap handheld that can send and receive at cb (hf) and vhf. Chanel adjustment to cb chanels instead of mhz for ease of use would be nice. Any sugestions? I have access to icom products mostly.
Anyone here from greece to advice me more specifically???
Jason

cat-5e. good up to 350mhz, 50ohm impedence IIRC. Is it feasible for feeders for 10 6 and 2m antennas? Just curious as i have a shedload of cat-5 around here (Uber-geek) and rg-58/rg-8 is a little on the espensive side around here.

Just curious. twinlead and ladderline gave me the thought.

I'm interested in antenna design/theory/physics and all that jazz, so
any info is appreciated.

TIA
73, KB3GUF

I would not recommend using cat 5 cable for antenna line. There just is not
enough shielding and insulation on the wires.   I would expect to see a
large amount of loss and leakage from the able.

Josh,
    Loss is very high (thus the 100 meter limit for Cat5). Insulation is inadequate for all but QRP operation. In a phrase, "forget it".

```

I have a nice HT (Vx-5 0wnz ;-) which is all fine and dandy for what i use it for (got an antenna on the breather pipe at home for 6/2 and 440) but i want to move into the vehicle mounted area (tired of sticking the rubber ducky out the window to xmit and haven't found a good mobile antenna yet (recommend one? all i can find is "CB/amateur' (gotta be bad SWR) and "cb 2m".. any good 2/440 or 6/2s out there for under 50 bucks?))

So my main question is, should I buy a mobile rig (another 200 bucks) or just mount a 1:5 or a 1:10 amp in the car (50-100 bucks) (5w out on the vx-5 remember) and just "jack in" when I want to go "mobile".... Considering I don't have any HF privlidges yet (hopefully within the year) I see no reason to invest in something like the 706 MKII-G just for 6/2/440 mobile.

comments are appreciated..

TIA

Josh,
I have a good 5/8 wave magnet mount antenna that I got from MFJ. It works
great with my Realistic HTX-202 2 meter handheld at 5 watts. Go to the
website and look at the different antenna options they have.
www.mfjenterprises.com
There are several different dealers and websites out there that have lots of
good products for what you are looking for.
Good luck.

Is there anyone out there that has better instructions for programming the
Heath HW24HT dual band HT? The manual I have is so damned confusing!!!!!!!!
The manual for my Icom HT was a pain in the *#&$ but I finally figured it
out, but I am having a hell of time with this radio. Can anyone help?

I don't know of a readily available antenna that does 6m AND either of the other bands, but there are plenty of 2m/440MHz "dual band" antennas available. Several of us around here have had good luck with assorted brands of dual-band thru-glass antennas. I was really surprised at how well thru-glass antennas work today. My brother had settled for one (against my advice) because he really didn't want to drill a hole through his new SUV and there just wasn't any great way to run coax to the outside anywhere. Since then I chose a different thru-glass dual band antenna when I changed radios from an Alinco that had separate antenna connectors to a Yaesu that combined both bands through a single antenna connector -- it was easier for me to get a dual band antenna than to get a duplexer so I could keep my two single band antennas.

Another simple alternative is to use a simple quarter-wave antenna for 2m (about 19") -- that same antenna will also perform great as a 3/4-wave at 440. Depending on the terrain, a quarter-wave (and a 3/4-wave) will often out-perform the most 5/8-wave or other "gain" antennas in mobile use.

Either route should do pretty well.

Don't overlook the possibility of getting a used mobile rig - often considerably cheaper than a new rig.

So far as the amplifier idea goes, I don't recall seeing any tri-band amps that would do 6/2/440. There are plenty of dual-band 2/440 amps available, although most I have seen are a bit higher priced than you mentioned (Your price range sounds more like a single band amp).

One other possibility you might try -- and the one I would recommend you try FIRST even if you decide to do something else later -- is to just use the HT in the car using a dual-band (2/440) mobile antenna. At VHF and UHF the antenna location and the antenna itself make more difference than the power you feed to them. 4 or 5W is plenty for mobile operation with a decent antenna in most parts of the country.

Wow! Someone still has a Heath HW24HT!!   I had one around here somewhere, but I honestly haven't been able to find it in over a year. They were a great radio in their day. But yes, the radio is a bit tricky to program. Plan on keeping the manual with you if you expect to do anything more complicated than picking from among the channels you already programmed in.

As I recall the radio and the manual, it really wasn't a bad manual, it is just that the radio itself was a bit tricky -- when Standard designed the HW24HT it had features that no one else offered yet and you really did need to follow the directions step by step to get it set up properly. But, at least as I remember mine, it really did work if you sat down at a table with the radio and the manual; looked up each thing you wanted to program, and followed the steps. The steps were correct (more than I can say for several radios today) but the sections of the manual were not always in the order that a person would want to do them. I'd suggest reading through the manual to get an idea of what you can do and where each thing is in the manual. Then decide what you want to do (probably program the memory channels) and work through it by looking up the steps you need.

Since you HAVE the manual, let me suggest making a copy of the picture of the face of the radio with all the buttons marked. Laminate that copy and keep it. If the markings on the radio haven't already worn off, they will once you start carrying the radio around and using it.

Actually aside from the battery going south..... the radio is in almost
perfect order!!! If there is a scratch on it, that would surprise me. Just
need to figure out the steps involved in order to program it, set PL tones
etc... just like I do on my other HT and mobile rig. I am comfortable now
with both my Icom HT and my Radio Shack mobile to the point I could operate
the damned things blind. (except for knowing what frequency I would be on
in VFO mode)

Ryan

Get a mobile. Can you read that 1" high LCD at arm's length, in the day, while driving down the road? Not likely. And don't even try at night.

A mobile radio is much safer, is wired directly to the battery (frees up a lighter socket, no wires hanging) and is bolted down. The unanchored HT is like a cannonball in a wreck - hope it doesn't hit you.

Hello. Could somebody please tell me if it's possible to access the CB
channels on ham radio? For instance if I have a small 2 meter transceiver
could I talk to somebody on CB with it, or are the completely separate?

Also, I've heard that you can access the cell phone frequencies and make
phone calls with a ham radio. Could somebody explain how this is done? Is
it possible for anybody with a ham radio or only certain types?

Thanks in advance!

Nick

hey nick
there is no way for a 2 meter radio and a CB radio to commincate a 2 meter radio transmits on 144-148 mhz and CB is on the 27mhz so there is a lot of space between them
as for cell phone calls to my knowledge you can not make cell phone calls with ham radios
there are SOME repeaters that have a phone patch where you can make a local call or to call the 911 operator in case of emergancy but you need a ham license to be legal to do that

FWIW, Kenwood's got some great displays. Looks like the other mfr's do too, but I'm rapidly becoming a big Kenwood and MFJ fan.

I picked up a very slightly used TM-G707 with the voice synth module in it for $225, and it's almost too easy. The 4-level dimmer makes it easy to see in most conditions, and failing that, the '6' on the mic keypad makes it speak the frequency. I wish it would read off the memory name, too, since I have a few other frequencies monitored that I don't always remember offhand, but maybe that's asking a bit much.

You might also look into getting an extra case or something to keep the HT in if you're carrying it around in the car. A hard stop can send it bouncing off the glovebox lid, which is really bad for it.

In a pinch, fasten the passenger side seat belt, and clip it onto that with the display against the seat upholstery.

No sweat. The battery shell is glued together pretty lightly (unless
someone has messed with it). You can run a utility knife around the
seam several times and gradually work through it. The cells themselves
are standard NiCads and pretty easy to replace.

An HW24HT was my primary rig for over a decade. I could work it one
handed without looking, but programming it was something I sat down at a
table to do, with the manual in hand. Once it's programmed, it is
pretty easy to use (once you get used to the keypad layout) but I never
did find any easy logical ways to program it.

Since you don't have a ham radio license, what are you doing with "a
small 2 meter transceiver"?

> Also, I've heard that you can access the cell phone frequencies and make
> phone calls with a ham radio.  Could somebody explain how this is done?

The first step is to get a ham radio license.  This requires learning a
little about the rules and a little about the technology. The tests
aren't hard but they do require a little bit of time and effort.

I modified a large semirigid plastic cup with some squirt in foam
insulation and my dremel to make a nice little harness for the radio
with a velcro strap on it... sits in the cupholder pretty well.   just
lettign others know some odd ways of doing things.. ;-)

Well, as a few others have already said. It's not possible for a 2 meter transceiver to transmit on CB bands. Not to mention the fact that, if my memory serves me correctly, any ham equipment (such as a 10 meter radio) modified to work on CB bands is not legal, since it hasn't been certified by the FCC to work on those frequencies.

along those lines... what about the FRS frequencies? does one still have to give station ID on the frs frequencies if using modified/wideband ham equipment?

```

Always an interesting question for those that are interested, but dont
know the rules.
To work on the cb bands, equipment must be'type accepted' by the FCC,
and currently there are not ham equipment that is also type accepted for
the CB bands. However, there is lots of older equipment that can do
both, as at one time the CB band was a ham band, and for instance, A
Yaesu FT101B etc can access the cb bands. Is it still type accepted to
to do that? I dont know the answer to that. Same thing for the Cell
phone bands, it is now illegal to listen with anything but a cell phone
being used properly. However, there are lots of scanners that will do
the job, not to mention a bunch of old television sets.
Anyway, the real question is:
Why Bother!
Get a cb radio to work cb,
get a cell phone and call whomever you want.

On FRS frequencies, amateur radio gear is, again, not a legal choice.
FRS was approved for transmitters with a VERY low wattage (less than
one watt?) and must meet commercial requirements. There aren't any
station IDs with FRS being that they are itinerate frequencies.
Remember, utilizing modified amateur radio equipment is ILLEGAL and
can get you into hot water as some of the folks around here found
out!

"Josh Sponenberg" <Sponge14@ptd.net> wrote in message
news:3B53AB54.385D36D8@ptd.net...
along those lines... what about the FRS frequencies? does one still
have
to give station ID on the frs frequencies if using modified/wideband
ham
equipment?

Perhaps you missed the "IF I have a small..."  I don't have one, I was
simply asking for interest because when I finish up some university courses
I plan on studying for my amt. license.

ISTR seeing a 6/2 mobile antenna at Texas Towers. At any rate, it was 6 and something else that wasn't HF. This was in their store, so you might call them and ask.

>Several of us around here have had good luck with assorted
>brands of dual-band thru-glass antennas.

I still have one, but it's not hooked up, since the inside part keeps falling off in the 100+ heat.

>Don't overlook the possibility of getting a used mobile rig - often
>considerably cheaper than a new rig.

So far, I've bought all my radios except the first HT used. Got them in great shape, and saved a lot.

I'm assuming you're talking about a ham radio HT with FRS ability. It would probably be a bad idea to use your callsign on FRS for the simple reason that people may think you're using a FRS radio tied into a ham radio, whether you are making this connection or not. This type of interconnection between radios is illegal since any modification made to a FRS radio or antenna immediately voids the FCC license for that radio to operate on the FRS frequencies.

FRS does not require a license and therefore does not require any type of ID, callsign, etc.

Essentially, to sum up: If you're using a frequency in the amateur band, you must use your amateur callsign. If you're using a citizens band (be it 27MHz or 460MHz) you are not required to ID and using your amateur radio callsign here is probably a bad idea.

In some countries they have what is called PMR rigs for CB. I think these
operate around the Ham 70cm band on FM. So in that case it could be done.
The poster didn't say what country he lived in.

Well, as most folks have made it clear, you can't talk from CB to Ham. Just
not legal. So, I won't cover that again.

Also, you cannot access the cell phone frequencies from a ham radio. However, you CAN make phone calls, under certain conditions. I think this is what you may have seen done. You see, on the 2 meter band it is quite common to use something called a "repeater". A repeater usually sits on a big hill, and listens for incoming transmissions. It then takes those incoming transmissions and rebroadcasts them, usually at a high power. This is very handy, as it lets a ham talk over a much greater range to another ham.

Where I live, there's a lot of mountains, and on one of the mountains is a repeater. Using this, I can be on one side of the mtn, and talk to someone on the other side, a task I could not normally do trying to talk directly.

OK, back to the phones. Some repeaters have a regular telephone line tied into them. Using a special set of codes (each repeater is different) you can have the repeater dial a phone number for you, and make a brief phone call to someone. I use it sometimes, when I get caught in traffic to let my wife know I'm running late or something similar.

This function is known as an "autopatch", and is probably what you are thinking of. Not all repeaters have autopatches, and many that do restrict their use to club members and the like. However, they are quite handy, as long as they are not abused.

Good luck getting your license, I've had great fun since getting mine, wish I'd done it 20 years earlier.

Robert / N4IXT

Let's talk hypothetically for a second.

Type acceptance; okay. So this infers that it's illegal to homebrew a CB radio (that you must purchase commercially)?

It should be clear to all that 11m isn't a ham band and the only priveleges you'd enjoy are those available to any CBer/FRSer. But, I would've opined that, regardless of equipment, you'd comport yourself like other users as long as you operated within the defined limits of the band (i.e. PEP, bandwidth, modulation, assigned frequencies, spurious emission, etc).

This sounds like it's reasonable and in accord with the spirit and intent so as not to infringe on other operator's priveleges.

Looking from the other side, what about modifying a CB with SSB for 10m?

73,
Drink, WP3JQ
